

1. Questions

Study the following information carefully and answer the following questions.

The given bar graph shows the total number of people who donated blood on five different days namely Monday, Tuesday, Wednesday, Thursday and Friday, respectively, and also the number of males who donated blood and the number of females who donated blood on these five different days.

Note: The total number of people who donated blood on each day = The number of males who donated + The number of females who donated.

Days	The total number of people who donated blood	The number of males who donated	The number of females who donated
Monday	$(m + 1250)$	1500	$2m/3$
Tuesday	2300	$(2m - 100)$	y
Wednesday	y	550	x
Thursday	3000	n	1200
Friday	4500	2000	-

@RankZen Banker

The total number of people who donated blood on Saturday is $5x$ and the number of males who donated blood on Saturday is y . Find the number of females who donated blood on Saturday.

- 720
- 900
- 1100
- 850
- 450

2. Questions

On Thursday, out of the number of males who donated blood, 60% of males were in the O +ve group and the rest of them were in the O -ve group. Find the number of males who donated to the O -ve group.

- 640
- 800
- 920
- 720

e. 1080

3. Questions

Find the ratio of the number of males who donated blood on Tuesday and Wednesday together to the value of n.

- a. 13: 12
- b. 19: 17
- c. 11: 9
- d. 8: 7
- e. 15: 16

4. Questions

Find the sum of the number of females who donated blood on Monday, Tuesday and Wednesday together.

- a. 1900
- b. 2150
- c. 1590
- d. 1750
- e. 1250

@RankZen Banker

5. Questions

The total number of people who donated blood on Friday is what percentage of the value of y.

- a. 420%
- b. 400%
- c. 350%
- d. 300%
- e. 500%

6. Questions

Study the following information carefully and answer the following questions.

The given line graph shows the total number of students who joined in the 100's in five different colleges namely A, B, C, D and E respectively and also the number of male students who joined in these five different colleges.

Note: The total number of students who joined = The number of male students who joined + The number of female students who joined.

The total number of students who joined college A is $x\%$ less than that in college D. If the number of male students who joined college A is decreased by $x\%$, then find the number of male students in college A after the decrease.

- 720
- 650
- 400
- 800
- 1100

@RankZen Banker

7. Questions

The total number of students who joined in college F is 12.5% less than that in college C and the number of male students who joined in college F is 350 more than that in college E. Find the number of female students who joined in college F.

- 500
- 720
- 900
- 1200
- 600

8. Questions

In college B, out of the number of males who joined, $\frac{5}{11}$ th joined UG and the rest of them joined PG. If the total number of students who joined UG is 3200, then find the number of females who

joined PG.

- a. 720
- b. 650
- c. 400
- d. 500
- e. 380

9. Questions

Find the average number of females who joined colleges A, C and E together.

- a. 2000
- b. 2100
- c. 1800
- d. 1880
- e. 3200

10. Questions

Find the ratio of the total number of students who joined in college A to the number of females who joined in college B.

- a. 11: 13
- b. 15: 11
- c. 8: 9
- d. 12: 19
- e. 14: 15

11. Questions

The compound interest for a sum of Rs. P at 12% per annum for 2 years is Rs. 3943.2. If the sum of Rs. (P - 2500) is invested in simple interest at the rate of 18% per annum for 5 years, then find the simple interest received.

- a. Rs. 11700
- b. Rs. 21500
- c. Rs. 15600
- d. Rs. 19500
- e. Rs. 21450

12. Questions

Vessel A contains a 1200 ml mixture in which milk and water are in the ratio of 2:1 and Vessel B contains a mixture of milk and water in the ratio of 2:3. If the mixture of both vessels is poured into a new vessel, namely vessel C, then the final ratio of the quantity of milk and water in vessel C is 18: 19. Find the initial quantity of milk in vessel B.

- a. 1200 ml
- b. 800 ml
- c. 1100 ml
- d. 1500 ml
- e. 1000 ml

13. Questions

Mohan buys a bag and a wallet for a total of Rs. 3000. He sells the bag at a profit of 22% and the wallet at a loss of 8%. If there is no overall profit or loss, find the selling price of the wallet.

- a. Rs. 2024
- b. Rs. 2180
- c. Rs. 3245
- d. Rs. 1870
- e. Rs. 1209

@RankZen Banker

14. Questions

M and N entered into a business by investing Rs. 3500 and Rs. 2500 respectively for 8 months and 6 months respectively. They donated $k\%$ of the profit to charity and distributed the remaining profit according to their investment so that N got Rs. 1980 as profit. If the total profit of the business is Rs. 6450, then find the value of k .

- a. 6
- b. 8
- c. 15
- d. 10
- e. 12

15. Questions

15 men can do a piece of work in 20 days while working 8 hours per day. If the efficiency of a man is twice that of a woman, then in how many hours per day can 60 women do the same work in 20 days?

- a. 6 hours

- b. 9 hours
- c. 5 hours
- d. 3 hours
- e. 4 hours

16. Questions

The ratio of the speed of the boat in still water to the speed of the stream is 5:2. If the time taken by boat to travel 175 km downstream is 6.25 hours, then find the time taken by the boat to travel 78 km upstream.

- a. 5.4 hours
- b. 6.5 hours
- c. 12 hours
- d. 4.2 hours
- e. 3.8 hours

17. Questions

If two dice are tossed, then find the sum of the probability of getting the sum of dice is exactly divisible by 5 and the sum of dice is prime number.

@RankZen Banker

- a. 11/18
- b. 12/19
- c. 21/29
- d. 32/41
- e. 13/15

18. Questions

After 5 years, the sum of the ages of B and C is 60 years and the sum of the present ages of A and C is 22 years more than the present age of B. If the present age of A is 40% that of C and the present age of D is twice that of A, then find the present age of D.

- a. 36 years
- b. 24 years
- c. 48 years
- d. 38 years
- e. 40 years

19. Questions

The radius and height of the right circular cylinder are 7 cm and x cm, respectively, and the volume of the circular cylinder is 3080 cm^3 . If the side of the square is $2x$ cm, then find the perimeter of the square.

- a. 160 cm
- b. 200 cm
- c. 240 cm
- d. 120 cm
- e. 80 cm

20. Questions

A person has a monthly income of Rs. 80000, out of which he spent 25% on rent, which is half of the amount spent on education. If the remaining amount of Rs. x is spent on food and nothing is saved, then find the value of x .

- a. Rs. 20000
- b. Rs. 25000
- c. Rs. 42000
- d. Rs. 21000
- e. Rs. 34000

@RankZen Banker

21. Questions

What value should come in the place of (?) in the following questions?

$$52\% \text{ of } 25\% \text{ of } 1200 - 45 * (9)^{1/2} = ?$$

- a. 18
- b. 23
- c. 21
- d. 19
- e. 6

22. Questions

$$(5/3) * 369 - 112 * 5 = ? * 3 + 4$$

- a. 17
- b. 19
- c. 43

d. 21

e. 4

23. Questions

$$15 * 8 - \sqrt{(1788 + 1348)} = ?^2 + 39$$

a. 8

b. 9

c. 3

d. 4

e. 5

24. Questions

$$[(12 / 17) * (102 / 5) * 240] / 48 = ?$$

a. 88

b. 90

c. 105

d. 72

e. 48

@RankZen Banker

25. Questions

$$(56 * 7/8) - 32 * 4 + 180 = ? - 32$$

a. 215

b. 133

c. 200

d. 187

e. 156

26. Questions

What approximate value should come in the place of (?) in the following questions?

$$\sqrt{169.12} - (225)^{1/2} * 3.98 = ? - 42.12\% \text{ of } 800.12$$

a. 245

b. 289

c. 324

d. 198

e. 201

27. Questions

$$82.12\% \text{ of } 550.12 - 4.12^2 * 3.98 = ? * 2.98$$

a. 156

b. 138

c. 181

d. 190

e. 129

28. Questions

$$19.12^2 + 2.12^3 - 72.12 * 2.98 = ?$$

a. 88

b. 153

c. 121

d. 56

e. 44

@RankZen Banker

29. Questions

$$82.12\% \text{ of } 999.91 - 14.12 * 25^{1/2} = ?/1.98$$

a. 1280

b. 1600

c. 880

d. 1500

e. 1520

30. Questions

$$156.12 - 88.12 + 18.12 * 3.12 = ?^2 + 1$$

a. 12

b. 8

c. 11

d. 16

e. 6

31. Questions

What value should come in the place of (?) in the following number series?

17, 36, 148, 894, ?, 71610

a. 7160

b. 980

c. 1240

d. 6256

e. 4550

32. Questions

345, 337, 364, ?, 425, 209

a. 288

b. 300

c. 305

d. 325

e. 280

@RankZen Banker

33. Questions

?, 17.3, 19.7, 22.2, 24.8, 27.5

a. 13.4

b. 12

c. 10.3

d. 8

e. 15

34. Questions

5760, 1152, 288, 96, 48, ?

a. 48

b. 32

c. 24

d. 16

e. 8

35. Questions

530, 584, 640, 698, 758, ?

a. 810

b. 760

c. 820

d. 980

e. 1020

36. Questions

Find out the wrong number in the following number series.

485, 530, 579, 626, 677, 730

a. 677

b. 730

c. 579

d. 530

e. 485

@RankZen Banker

37. Questions

16, 36, 96, 384, 1920, 11520

a. 384

b. 1920

c. 16

d. 11520

e. 36

38. Questions

720, 706, 684, 661, 632, 601

a. 684

b. 632

c. 601

d. 706

e. 720

39. Questions

18, 12, 11, 17.5, 36, 91

a. 11

b. 17.5

c. 36

d. 91

e. 12

40. Questions

188, 215, 231, 356, 398, 735

a. 398

b. 735

c. 215

d. 188

e. 231

@RankZen Banker

41. Questions

The following question contains two equations as I and II. You have to solve both equations and determine the relationship between them and answer accordingly.

i). $2x^2 - 49x + 272 = 0$

ii). $y^2 - 35y + 306 = 0$

a. $x > y$

b. $x \geq y$

c. $x = y$ or a relationship cannot be established

d. $x < y$

e. $x \leq y$

42. Questions

i). $x^2 - 19x + 78 = 0$

ii). $y^2 - 9y + 20 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or a relationship cannot be established
- d. $x < y$
- e. $x \leq y$

43. Questions

i). $x^2 - 2x - 195 = 0$

ii). $y^2 + 29y + 208 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or a relationship cannot be established
- d. $x < y$
- e. $x \leq y$

44. Questions

i). $x^2 + 2x - 48 = 0$

ii). $y^2 + 3y - 40 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or a relationship cannot be established
- d. $x < y$
- e. $x \leq y$

45. Questions

i). $x^2 - 23x + 120 = 0$

ii). $y^2 - 14y + 40 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or a relationship cannot be established
- d. $x < y$

@RankZen Banker

e. $x \leq y$

Explanations:

1. Questions

$$m + 1250 = 1500 + 2m/3$$

$$(m + 1250) * 3 = 4500 + 2m$$

$$3m + 3750 = 4500 + 2m$$

$$m = 750$$

On Monday:

The total number of people who donated blood = $(750 + 1250) = 2000$

The number of males who donated blood = 1500

The number of females who donated blood = $(2 * 750)/3 = 500$

On Tuesday:

The total number of people who donated blood = 2300

The number of males who donated blood = $(2 * 750 - 100) = 1400$

The number of females who donated blood = $(2300 - 1400) = 900$

$$y = 900$$

On Wednesday:

The total number of people who donated blood = $y = 900$

The number of males who donated blood = 550

The number of females who donated blood = $(900 - 550) = 350$

$$x = 350$$

On Thursday:

The total number of people who donated blood = 3000

The number of males who donated blood = $(3000 - 1200) = 1800$

$$n = 1800$$

The number of females who donated blood = 1200

On Friday:

The total number of people who donated blood = 4500

The number of males who donated blood = 2000

@RankZen Banker

The number of females who donated blood = $(4500 - 2000) = 2500$

Days	The total number of people who donated blood	The number of males who donated blood	The number of females who donated blood
Monday	2000	1500	500
Tuesday	2300	1400	900
Wednesday	900	550	350
Thursday	3000	1800	1200
Friday	4500	2000	2500

Answer: D

The total number of people who donated blood on Saturday = $5x = 350 * 5 = 1750$

The number of males who donated blood on Saturday = $y = 900$

The number of females who donated blood on Saturday = $(1750 - 900) = 850$ @RankZen Banker

Hence, the correct answer is option D

2. Questions

$$m + 1250 = 1500 + 2m/3$$

$$(m + 1250) * 3 = 4500 + 2m$$

$$3m + 3750 = 4500 + 2m$$

$$m = 750$$

On Monday:

The total number of people who donated blood = $(750 + 1250) = 2000$

The number of males who donated blood = 1500

The number of females who donated blood = $(2 * 750)/3 = 500$

On Tuesday:

The total number of people who donated blood = 2300

The number of males who donated blood = $(2 * 750 - 100) = 1400$

The number of females who donated blood = $(2300 - 1400) = 900$

$$y = 900$$

On Wednesday:

The total number of people who donated blood = $y = 900$

The number of males who donated blood = 550

The number of females who donated blood = $(900 - 550) = 350$

$x = 350$

On Thursday:

The total number of people who donated blood = 3000

The number of males who donated blood = $(3000 - 1200) = 1800$

$n = 1800$

The number of females who donated blood = 1200

On Friday:

The total number of people who donated blood = 4500

The number of males who donated blood = 2000

The number of females who donated blood = $(4500 - 2000) = 2500$

Days	The total number of people who donated blood	The number of males who donated blood	The number of females who donated blood
Monday	2000	1500	500
Tuesday	2300	1400	900
Wednesday	900	550	350
Thursday	3000	1800	1200
Friday	4500	2000	2500

@RankZen Banker

Answer: D

The number of males who donated to the O -ve group on Thursday = $1800 * 40/100 = 720$

Hence, the correct answer is option D

3. Questions

$$m + 1250 = 1500 + 2m/3$$

$$(m + 1250) * 3 = 4500 + 2m$$

$$3m + 3750 = 4500 + 2m$$

$$m = 750$$

On Monday:

The total number of people who donated blood = $(750 + 1250) = 2000$

The number of males who donated blood = 1500

The number of females who donated blood = $(2 * 750)/3 = 500$

On Tuesday:

The total number of people who donated blood = 2300

The number of males who donated blood = $(2 * 750 - 100) = 1400$

The number of females who donated blood = $(2300 - 1400) = 900$

$$y = 900$$

On Wednesday:

The total number of people who donated blood = $y = 900$

The number of males who donated blood = 550

The number of females who donated blood = $(900 - 550) = 350$

$$x = 350$$

On Thursday:

The total number of people who donated blood = 3000

The number of males who donated blood = $(3000 - 1200) = 1800$

$$n = 1800$$

The number of females who donated blood = 1200

On Friday:

The total number of people who donated blood = 4500

The number of males who donated blood = 2000

The number of females who donated blood = $(4500 - 2000) = 2500$

@RankZen Banker

Days	The total number of people who donated blood	The number of males who donated blood	The number of females who donated blood
Monday	2000	1500	500
Tuesday	2300	1400	900
Wednesday	900	550	350
Thursday	3000	1800	1200
Friday	4500	2000	2500

Answer: A

The number of males who donated blood on Tuesday and Wednesday together = $(1400 + 550) = 1950$

$n = 1800$

Required ratio = $1950 : 1800 = 39 : 36 = 13 : 12$

Hence, the correct answer is option A

@RankZen Banker

4. Questions

$$m + 1250 = 1500 + 2m/3$$

$$(m + 1250) * 3 = 4500 + 2m$$

$$3m + 3750 = 4500 + 2m$$

$$m = 750$$

On Monday:

The total number of people who donated blood = $(750 + 1250) = 2000$

The number of males who donated blood = 1500

The number of females who donated blood = $(2 * 750)/3 = 500$

On Tuesday:

The total number of people who donated blood = 2300

The number of males who donated blood = $(2 * 750 - 100) = 1400$

The number of females who donated blood = $(2300 - 1400) = 900$

$$y = 900$$

On Wednesday:

The total number of people who donated blood = $y = 900$

The number of males who donated blood = 550

The number of females who donated blood = $(900 - 550) = 350$

$x = 350$

On Thursday:

The total number of people who donated blood = 3000

The number of males who donated blood = $(3000 - 1200) = 1800$

$n = 1800$

The number of females who donated blood = 1200

On Friday:

The total number of people who donated blood = 4500

The number of males who donated blood = 2000

The number of females who donated blood = $(4500 - 2000) = 2500$

Days	The total number of people who donated blood	The number of males who donated blood	The number of females who donated blood
Monday	2000	1500	500
Tuesday	2300	1400	900
Wednesday	900	550	350
Thursday	3000	1800	1200
Friday	4500	2000	2500

@RankZen Banker

Answer: D

The sum of the number of females who donated blood on Monday, Tuesday and Wednesday together = $(500 + 900 + 350) = 1750$

Hence, the correct answer is option D

5. Questions

$m + 1250 = 1500 + 2m/3$

$(m + 1250) * 3 = 4500 + 2m$

$$3m + 3750 = 4500 + 2m$$

$$m = 750$$

On Monday:

The total number of people who donated blood = $(750 + 1250) = 2000$

The number of males who donated blood = 1500

The number of females who donated blood = $(2 * 750)/3 = 500$

On Tuesday:

The total number of people who donated blood = 2300

The number of males who donated blood = $(2 * 750 - 100) = 1400$

The number of females who donated blood = $(2300 - 1400) = 900$

$$y = 900$$

On Wednesday:

The total number of people who donated blood = $y = 900$

The number of males who donated blood = 550

The number of females who donated blood = $(900 - 550) = 350$

$$x = 350$$

On Thursday:

The total number of people who donated blood = 3000

The number of males who donated blood = $(3000 - 1200) = 1800$

$$n = 1800$$

The number of females who donated blood = 1200

On Friday:

The total number of people who donated blood = 4500

The number of males who donated blood = 2000

The number of females who donated blood = $(4500 - 2000) = 2500$

@RankZen Banker

Days	The total number of people who donated blood	The number of males who donated blood	The number of females who donated blood
Monday	2000	1500	500
Tuesday	2300	1400	900
Wednesday	900	550	350
Thursday	3000	1800	1200
Friday	4500	2000	2500

Answer: E

The total number of people who donated blood on Friday = 4500

$y = 900$

Required percentage = $(4500/900) * 100 = 500\%$

Hence, the correct answer is option E

@RankZen Banker

6. Questions

In college A:

The total number of students who joined = $30 * 100 = 3000$

The number of male students who joined = $3000 * 40/100 = 1200$

The number of female students who joined = $3000 * 60/100 = 1800$

In college B:

The total number of students who joined = $55 * 100 = 5500$

The number of male students who joined = $5500 * 60/100 = 3300$

The number of female students who joined = $5500 * 40/100 = 2200$

In college C:

The total number of students who joined = $20 * 100 = 2000$

The number of male students who joined = $2000 * 50/100 = 1000$

The number of female students who joined = $2000 * 50/100 = 1000$

In college D:

The total number of students who joined = $45 * 100 = 4500$

The number of male students who joined = $4500 \times 40/100 = 1800$

The number of female students who joined = $4500 \times 60/100 = 2700$

In college E:

The total number of students who joined = $40 \times 100 = 4000$

The number of male students who joined = $4000 \times 20/100 = 800$

The number of female students who joined = $4000 \times 80/100 = 3200$

Colleges	The total number of students who joined	The number of male students who joined	The number of female students who joined
A	3000	1200	1800
B	5500	3300	2200
C	2000	1000	1000
D	4500	1800	2700
E	4000	800	3200

@RankZen Banker

Answer: D

The total number of students who joined in college A = 3000

The total number of students who joined in college D = 4500

$$x = (4500 - 3000)/4500 \times 100$$

$$x = 1500/45$$

$$x = 33.33\%$$

The number of male students who joined in college A after decreases = $1200 - 1200 \times 1/3 = (1200 - 400) = 800$

Hence, the correct answer is option D

7. Questions

In college A:

The total number of students who joined = $30 \times 100 = 3000$

The number of male students who joined = $3000 \times 40/100 = 1200$

The number of female students who joined = $3000 \times 60/100 = 1800$

In college B:

The total number of students who joined = $55 * 100 = 5500$

The number of male students who joined = $5500 * 60/100 = 3300$

The number of female students who joined = $5500 * 40/100 = 2200$

In college C:

The total number of students who joined = $20 * 100 = 2000$

The number of male students who joined = $2000 * 50/100 = 1000$

The number of female students who joined = $2000 * 50/100 = 1000$

In college D:

The total number of students who joined = $45 * 100 = 4500$

The number of male students who joined = $4500 * 40/100 = 1800$

The number of female students who joined = $4500 * 60/100 = 2700$

In college E:

The total number of students who joined = $40 * 100 = 4000$

The number of male students who joined = $4000 * 20/100 = 800$

The number of female students who joined = $4000 * 80/100 = 3200$

@RankZen Banker

Colleges	The total number of students who joined	The number of male students who joined	The number of female students who joined
A	3000	1200	1800
B	5500	3300	2200
C	2000	1000	1000
D	4500	1800	2700
E	4000	800	3200

Answer: E

The total number of students who joined in college F = $2000 * 87.5/100 = 1750$

The number of male students who joined in college F = $350 + 800 = 1150$

The number of female students who joined in college F = $(1750 - 1150) = 600$

Hence, the correct answer is option E

8. Questions

In college A:

The total number of students who joined = $30 * 100 = 3000$

The number of male students who joined = $3000 * 40/100 = 1200$

The number of female students who joined = $3000 * 60/100 = 1800$

In college B:

The total number of students who joined = $55 * 100 = 5500$

The number of male students who joined = $5500 * 60/100 = 3300$

The number of female students who joined = $5500 * 40/100 = 2200$

In college C:

The total number of students who joined = $20 * 100 = 2000$

The number of male students who joined = $2000 * 50/100 = 1000$

The number of female students who joined = $2000 * 50/100 = 1000$

In college D:

The total number of students who joined = $45 * 100 = 4500$

The number of male students who joined = $4500 * 40/100 = 1800$

The number of female students who joined = $4500 * 60/100 = 2700$

In college E:

The total number of students who joined = $40 * 100 = 4000$

The number of male students who joined = $4000 * 20/100 = 800$

The number of female students who joined = $4000 * 80/100 = 3200$

@RankZen Banker

Colleges	The total number of students who joined	The number of male students who joined	The number of female students who joined
A	3000	1200	1800
B	5500	3300	2200
C	2000	1000	1000
D	4500	1800	2700
E	4000	800	3200

Answer: D

The number of males who joined in college B = 3300

The number of males who joined UG in college B = $3300 \times \frac{5}{11} = 1500$

The number of females who joined UG in college B = $3200 - 1500 = 1700$

The number of females who joined PG in college B = $(2200 - 1700) = 500$

Hence, the correct answer is option D

9. Questions

In college A:

The total number of students who joined = $30 \times 100 = 3000$

The number of male students who joined = $3000 \times \frac{40}{100} = 1200$

The number of female students who joined = $3000 \times \frac{60}{100} = 1800$

In college B:

The total number of students who joined = $55 \times 100 = 5500$

The number of male students who joined = $5500 \times \frac{60}{100} = 3300$

The number of female students who joined = $5500 \times \frac{40}{100} = 2200$

In college C:

The total number of students who joined = $20 \times 100 = 2000$

The number of male students who joined = $2000 \times \frac{50}{100} = 1000$

The number of female students who joined = $2000 \times \frac{50}{100} = 1000$

In college D:

The total number of students who joined = $45 * 100 = 4500$

The number of male students who joined = $4500 * 40/100 = 1800$

The number of female students who joined = $4500 * 60/100 = 2700$

In college E:

The total number of students who joined = $40 * 100 = 4000$

The number of male students who joined = $4000 * 20/100 = 800$

The number of female students who joined = $4000 * 80/100 = 3200$

Colleges	The total number of students who joined	The number of male students who joined	The number of female students who joined
A	3000	1200	1800
B	5500	3300	2200
C	2000	1000	1000
D	4500	1800	2700
E	4000	800	3200

@RankZen Banker

Answer: A

The sum of the number of females who joined in colleges A, C and E together = $(1800 + 3200 + 1000) = 6000$

Required average = $6000/3 = 2000$

Hence, the correct answer is option A

10. Questions

In college A:

The total number of students who joined = $30 * 100 = 3000$

The number of male students who joined = $3000 * 40/100 = 1200$

The number of female students who joined = $3000 * 60/100 = 1800$

In college B:

The total number of students who joined = $55 * 100 = 5500$

The number of male students who joined = $5500 * 60/100 = 3300$

The number of female students who joined = $5500 * 40/100 = 2200$

In college C:

The total number of students who joined = $20 * 100 = 2000$

The number of male students who joined = $2000 * 50/100 = 1000$

The number of female students who joined = $2000 * 50/100 = 1000$

In college D:

The total number of students who joined = $45 * 100 = 4500$

The number of male students who joined = $4500 * 40/100 = 1800$

The number of female students who joined = $4500 * 60/100 = 2700$

In college E:

The total number of students who joined = $40 * 100 = 4000$

The number of male students who joined = $4000 * 20/100 = 800$

The number of female students who joined = $4000 * 80/100 = 3200$

Colleges	The total number of students who joined	The number of male students who joined	The number of female students who joined
A	3000	1200	1800
B	5500	3300	2200
C	2000	1000	1000
D	4500	1800	2700
E	4000	800	3200

@RankZen Banker

Answer: B

The total number of students who joined in college A = 3000

The number of females who joined in college B = 2200

Required ratio = $3000: 2200 = 15: 11$

Hence, the correct answer is option B

11. Questions

Answer: A

$$CI = P * (1 + R/100)^n - P$$

$$3943.2 = P * (1 + 12/100)^2 - P$$

$$3943.2 = P * 1.12 * 1.12 - P$$

$$3943.2 = 0.2544P$$

$$P = \text{Rs. } 15500$$

$$SI = PNR/100$$

$$\text{The amount invested in simple interest} = (15500 - 2500) = \text{Rs. } 13000$$

$$SI = 13000 * 18 * 5/100$$

$$SI = \text{Rs. } 11700$$

Hence, the correct answer is option A

12. Questions

Answer: E

$$\text{The quantity of milk in mixture A} = 1200 * 2/3 = 800 \text{ ml}$$

$$\text{The quantity of water in mixture A} = 1200 * 1/3 = 400 \text{ ml}$$

Let, the quantity of milk and water in vessel B be $2x$ ml and $3x$ ml, respectively.

$$(800 + 2x)/(400 + 3x) = 18/19$$

$$15200 + 38x = 7200 + 54x$$

$$8000 = 16x$$

$$x = 500$$

$$\text{The initial quantity of milk in vessel B} = 2 * 500 = 1000 \text{ ml}$$

Hence, the correct answer is option E

13. Questions

Answer: A

$$\text{Let, the cost price of the bag} = \text{Rs. } x$$

$$\text{The cost price of the wallet} = \text{Rs. } (3000 - x)$$

$$x * 122/100 + (3000 - x) * 92/100 = 3000$$

$$1.22x + 2760 - 0.92x = 3000$$

$$0.3x = 240$$

$$x = 800$$

$$\text{The cost price of the wallet} = (3000 - 800) = \text{Rs. } 2200$$

$$\text{The selling price of the wallet} = 2200 * 92/100 = \text{Rs. } 2024$$

@RankZen Banker

Hence, the correct answer is option A

14. Questions

Answer: E

The ratio of the profit share of M to N = $(3500 * 8) : (2500 * 6)$

$$= 28 : 15$$

$$6450 * (100 - k) / 100 * 15 / 43 = 1980$$

$$2250 - 22.5k = 1980$$

$$22.5k = 270$$

$$k = 12$$

Hence, the correct answer is option E

15. Questions

Answer: E

One man is equivalent to two women $M = 2W$

So, 15 men equal to 30 women

$$15M = 30W$$

$$30 * 20 * 8 = 60 * 20 * ?$$

$$? = 4 \text{ hours}$$

Hence, the correct answer is option E

16. Questions

Answer: B

Let, the speed of the boat in still water and speed of the stream be $5x$ km/hr and $2x$ km/hr respectively.

The downstream speed of the boat = $(5x + 2x) = 7x$ km/hr

The upstream speed of the boat = $(5x - 2x) = 3x$ km/hr

$$175 / 6.25 = 7x$$

$$7x = 28$$

$$x = 4$$

The upstream speed of the boat = $(3 * 4) = 12$ km/hr

Required time taken = $78 / 12 = 6.5$ hours

Hence, the correct answer is option B

17. Questions

Answer: A

@RankZen Banker

The possibilities of getting the sum of the dice is divisible by 5 = (1, 4), (2, 3), (3, 2), (4, 1), (4, 6), (5, 5), (6, 4) = 7

The number of outcomes where the sum is exactly divisible by 5 = 7/36

The possibilities of getting the sum of the dice is prime number = (1, 1), (1, 2), (1, 4), (1, 6), (2, 1), (2, 3), (2, 5), (3, 2), (3, 4), (4, 1), (4, 3), (5, 2), (5, 6), (6, 1), (6, 5) = 15

The number of outcomes where the sum is a prime number = 15/36

sum of the probabilities = $(7/36 + 15/36) = 22/36 = 11/18$

Hence, the correct answer is option A

18. Questions

Answer: B

The ratio of the present age of A to C = 40 : 100 = 2:5

Let, the present age of A and C be 2x years and 5x years respectively.

$$B + C + 10 = 60$$

$$B + C = 50$$

$$B = 50 - C$$

$$B = 50 - 5x$$

$$A + C = 22 + B$$

$$2x + 5x = 22 + 50 - 5x$$

$$7x + 5x = 72$$

$$12x = 72$$

$$x = 6$$

The present age of A = $2 * 6 = 12$ years

The present age of D = $12 * 2 = 24$ years

Hence, the correct answer is option B

19. Questions

Answer: A

The volume of the circular cylinder = $\pi r^2 h \text{ cm}^3$

$$3080 = (22/7) * 7 * 7 * x$$

$$3080 = 154 * x$$

$$x = 20$$

The side of the square = $20 * 2 = 40 \text{ cm}$

@RankZen Banker

The perimeter of the square = $4a$ cm

$$= 40 * 4 = 160 \text{ cm}$$

Hence, the correct answer is option A

20. Questions

Answer: A

The total monthly income = Rs. 80000

The amount spent on rent = $80000 * 25/100 = \text{Rs. } 20000$

The amount spent on education = $20000 * 2 = \text{Rs. } 40000$

The remaining amount = $(80000 - 20000 - 40000) = 80000 - 60000 = \text{Rs. } 20000$

Hence, the correct answer is option A

21. Questions

Answer: C

$$52\% \text{ of } 25\% \text{ of } 1200 - 45 * (9)^{1/2} = ?$$

$$13 * 12 - 45 * 3 = ?$$

$$156 - 135 = ?$$

$$? = 21$$

Hence, the correct answer is option C

22. Questions

Answer: A

$$(5/3) * 369 - 112 * 5 = ? * 3 + 4$$

$$5 * 123 - 560 = ? * 3 + 4$$

$$615 - 560 = ? * 3 + 4$$

$$55 - 4 = ? * 3$$

$$51 = ? * 3$$

$$? = 17$$

Hence, the correct answer is option A

23. Questions

Answer: E

$$15 * 8 - \sqrt{(1788 + 1348)} = ?^2 + 39$$

$$120 - \sqrt{3136} = ?^2 + 39$$

@RankZen Banker

$$120 - 56 = ?^2 + 39$$

$$64 - 39 = ?^2$$

$$?^2 = 25$$

$$? = 5$$

Hence, the correct answer is option E

24. Questions

Answer: D

$$[(12 / 17) * (102 / 5) * 240] / 48 = ?$$

$$[12 * 6 * 48] / 48 = ?$$

$$12 * 6 = ?$$

$$? = 72$$

Hence, the correct answer is option D

25. Questions

Answer: B

$$(56 * 7/8) - 32 * 4 + 180 = ? - 32$$

$$(7 * 7) - 128 + 180 = ? - 32$$

$$49 - 128 + 180 + 32 = ?$$

$$? = 133$$

Hence, the correct answer is option B

26. Questions

Answer: B

$$\sqrt{169.12} - (225)^{1/2} * 3.98 = ? - 42.12\% \text{ of } 800.12$$

$$\sqrt{169} - (225)^{1/2} * 4 = ? - 42\% \text{ of } 800$$

$$13 - 15 * 4 = ? - 336$$

$$13 - 60 = ? - 336$$

$$13 - 60 + 336 = ?$$

$$? = 289$$

Hence, the correct answer is option B

27. Questions

Answer: E

@RankZen Banker

$$82.12\% \text{ of } 550.12 - 4.12^2 * 3.98 = ? * 2.98$$

$$82\% \text{ of } 550 - 4^2 * 4 = ? * 3$$

$$451 - 16 * 4 = ? * 3$$

$$387/3 = ?$$

$$? = 129$$

Hence, the correct answer is option E

28. Questions

Answer: B

$$19.12^2 + 2.12^3 - 72.12 * 2.98 = ?$$

$$19^2 + 2^3 - 72 * 3 = ?$$

$$361 + 8 - 216 = ?$$

$$? = 153$$

Hence, the correct answer is option B

29. Questions

Answer: D

$$82.12\% \text{ of } 999.91 - 14.12 * 25^{1/2} = ?/1.98$$

$$82\% \text{ of } 1000 - 14 * 5 = ?/2$$

$$820 - 70 = ?/2$$

$$750 * 2 = ?$$

$$? = 1500$$

Hence, the correct answer is option D

30. Questions

Answer: C

$$156.12 - 88.12 + 18.12 * 3.12 = ?^2 + 1$$

$$156 - 88 + 18 * 3 = ?^2 + 1$$

$$156 - 88 + 54 = ?^2 + 1$$

$$122 - 1 = ?^2$$

$$?^2 = 121$$

$$? = 11$$

@RankZen Banker

Hence, the correct answer is option C

31. Questions

Answer: A

$$(17 * 2) + 2 = 36$$

$$(36 * 4) + 4 = 148$$

$$(148 * 6) + 6 = 894$$

$$(894 * 8) + 8 = \mathbf{7160}$$

$$(7160 * 10) + 10 = 71610$$

Hence, the correct answer is option A

32. Questions

Answer: B

$$345 - 2^3 = 337$$

$$337 + 3^3 = 364$$

$$364 - 4^3 = \mathbf{300}$$

$$300 + 5^3 = 425$$

$$425 - 6^3 = 209$$

Hence, the correct answer is option B

33. Questions

Answer: E

$$15 + 2.3 = 17.3$$

$$17.3 + 2.4 = 19.7$$

$$19.7 + 2.5 = 22.2$$

$$22.2 + 2.6 = 24.8$$

$$24.8 + 2.7 = 27.5$$

Hence, the correct answer is option E

34. Questions

Answer: A

$$5760/5 = 1152$$

$$1152/4 = 288$$

$$288/3 = 96$$

@RankZen Banker

$$96/2 = 48$$

$$48/1 = \mathbf{48}$$

Hence, the correct answer is option A

35. Questions

Answer: C

$$530 + 54 = 584$$

$$584 + 56 = 640$$

$$640 + 58 = 698$$

$$698 + 60 = 758$$

$$758 + 62 = \mathbf{820}$$

Hence, the correct answer is option C

36. Questions

Answer: C

$$22^2 + 1 = 485$$

$$23^2 + 1 = 530$$

$$24^2 + 1 = \mathbf{577}$$

$$25^2 + 1 = 626$$

$$26^2 + 1 = 677$$

$$27^2 + 1 = 730$$

Or

$$485 \quad 530 \quad 577 \quad 626 \quad 677 \quad 730$$

$$45 \quad 47 \quad 49 \quad 51 \quad 53$$

Hence, the correct answer is option C

37. Questions

Answer: E

$$16 * 2 = \mathbf{32}$$

$$32 * 3 = 96$$

$$96 * 4 = 384$$

$$384 * 5 = 1920$$

$$1920 * 6 = 11520$$

@RankZen Banker

Hence, the correct answer is option E

38. Questions

Answer: D

$$720 - 17 = \mathbf{703}$$

$$703 - 19 = 684$$

$$684 - 23 = 661$$

$$661 - 29 = 632$$

$$632 - 31 = 601$$

Hence, the correct answer is option D

39. Questions

Answer: E

$$(18 * 0.5) + 1 = \mathbf{10}$$

$$(10 * 1) + 1 = 11$$

$$(11 * 1.5) + 1 = 17.5$$

$$(17.5 * 2) + 1 = 36$$

$$(36 * 2.5) + 1 = 91$$

Hence, the correct answer is option E

40. Questions

Answer: A

$$188 + 3^3 = 215$$

$$215 + 4^2 = 231$$

$$231 + 5^3 = 356$$

$$356 + 6^2 = \mathbf{392}$$

$$392 + 7^3 = 735$$

Hence, the correct answer is option A

41. Questions

Answer: D

$$\text{i). } 2x^2 - 49x + 272 = 0$$

$$2x^2 - 32x - 17x + 272 = 0$$

@RankZen Banker

$$2x(x - 16) - 17(x - 16) = 0$$

$$(2x - 17)(x - 16) = 0$$

$$x = 8.5, 16$$

$$\text{ii). } y^2 - 35y + 306 = 0$$

$$y^2 - 17y - 18y + 306 = 0$$

$$y(y - 17) - 18(y - 17) = 0$$

$$(y - 17)(y - 18) = 0$$

$$y = 17, 18$$

Thus, $x < y$

Hence, the correct answer is option D

42. Questions

Answer: A

$$\text{i). } x^2 - 19x + 78 = 0$$

$$x^2 - 13x - 6x + 78 = 0$$

$$x(x - 13) - 6(x - 13) = 0$$

$$(x - 13)(x - 6) = 0$$

$$x = 13, 6$$

$$\text{ii). } y^2 - 9y + 20 = 0$$

$$y^2 - 4y - 5y + 20 = 0$$

$$y(y - 4) - 5(y - 4) = 0$$

$$(y - 4)(y - 5) = 0$$

$$y = 4, 5$$

Thus, $x > y$

Hence, the correct answer is option A

43. Questions

Answer: B

$$\text{i). } x^2 - 2x - 195 = 0$$

$$x^2 - 15x + 13x - 195 = 0$$

$$x(x - 15) + 13(x - 15) = 0$$

@RankZen Banker

$$(x - 15)(x + 13) = 0$$

$$x = 15, -13$$

$$\text{ii). } y^2 + 29y + 208 = 0$$

$$y^2 + 16y + 13y + 208 = 0$$

$$y(y + 16) + 13(y + 16) = 0$$

$$(y + 16)(y + 13) = 0$$

$$y = -16, -13$$

Thus, $x \geq y$

Hence, the correct answer is option B

44. Questions

Answer: C

$$\text{i). } x^2 + 2x - 48 = 0$$

$$x^2 + 8x - 6x - 48 = 0$$

$$x(x + 8) - 6(x + 8) = 0$$

$$(x + 8)(x - 6) = 0$$

$$x = -8, 6$$

$$\text{ii). } y^2 + 3y - 40 = 0$$

$$y^2 + 8y - 5y - 40 = 0$$

$$y(y + 8) - 5(y + 8) = 0$$

$$(y + 8)(y - 5) = 0$$

$$y = -8, 5$$

Thus, relationships cannot be established.

Hence, the correct answer is option C

45. Questions

Answer: C

$$\text{i). } x^2 - 23x + 120 = 0$$

$$x^2 - 15x - 8x + 120 = 0$$

$$x(x - 15) - 8(x - 15) = 0$$

$$(x - 15)(x - 8) = 0$$

@RankZen Banker

$$x = 15, 8$$

$$\text{ii). } y^2 - 14y + 40 = 0$$

$$y^2 - 10y - 4y + 40 = 0$$

$$y(y - 10) - 4(y - 10) = 0$$

$$(y - 10)(y - 4) = 0$$

$$y = 10, 4$$

Thus, the relationship cannot be established

Hence, the correct answer is option C
