

1. Questions

Study the following information carefully and answer the questions given below:

In the private institute XYZ, teaches five different courses (i.e. P, Q, R, S and T). The given table below shows that the number of girls who studied in each course and also given the percentage of the number of boys out of the total number of students who studied in each course.

Note:

In each course, the total number of students who studied = the number of boys who studied + the number of girls who studied.

Courses	The number of girls who studied	The number of boys as percentage of the total number of students who studied
P	48	60%
Q	90	40%
R	40	75%
S	140	30%
T	72	20%

If 25% of the boys in course P, who studied in online and the remaining boys who studied in offline, then find the number of boys who studied offline in course P.

- a. 39
- b. 54
- c. 36
- d. 45
- e. 48

2. Questions

The ratio of the number of boys who studied in course U to that in P is 4:3. If the ratio of the number of girls to boys who studied in course U is 5:2, then find the total number of students who studied in course U.

- a. 356
- b. 342
- c. 376
- d. 336
- e. 396

3. Questions

Find the difference between the number of boys who studied in course S to the number of girls who studied in course R.

- a. 20
- b. 30
- c. 10
- d. 25
- e. 15

4. Questions

The number of girls who studied in course T is how much percentage of the total number of students who studied in course Q?

- a. 40%
- b. 52%
- c. 45%
- d. 56%
- e. 48%

@RankZenBanker

5. Questions

Find the ratio of the total number of students who studied in course P to that in course R?

- a. 3:4
- b. 4:5
- c. 1:2
- d. 2:3
- e. 5:2

6. Questions

Study the following information carefully and answer the questions given below:

Four sellers ('A', 'B', 'C' and 'D') sold balls of two colours (red + green) only. The number of red balls sold by B is 40 more than that sold by D. The ratio of the number of green balls sold by C to the number of red balls sold by B is 6:5. The average number of green balls sold by A and C is 100. The number of red balls sold by C is same as number of green balls sold by A. The number of red balls sold by A is 40, which is half of number of red balls sold by C. The ratio of the number of green balls sold by B to the number of red balls sold by A is 3:2. The ratio of the number of green balls sold by D and B is 1:2 respectively.

Find the average number of red balls sold by A, C and D.

- a. 60
- b. 54
- c. 66
- d. 63
- e. 57

7. Questions

If the total number of balls sold by B (red + green + blue) is 225, then find the number of blue balls sold by B.

- a. 77
- b. 60
- c. 65
- d. 75
- e. 72

8. Questions

Find the ratio of the number of red balls sold by B to the number of green balls sold by C

@RankZenBanker

- a. 3:2
- b. 5:6
- c. 1:7
- d. 2:1
- e. 2:5

9. Questions

The number of green balls sold by D is what percentage of the number of red balls sold by C?

- a. 42.5%
- b. 33.33%
- c. 27.5%
- d. 22.25%
- e. 37.5%

10. Questions

Find the difference between the number of green balls sold by A and the total number of balls sold by D.

- a. 18
- b. 12
- c. 8
- d. 10
- e. 15

11. Questions

Study the following information carefully and answer the questions given below:

The bar graph shows the total number of Scooty (Electric and non – electric) sold by five different companies (i.e. A, B, C, D and E) in 2025.

Note: The total number of Scooty sold = The number of electric Scooty sold + the number of non – electric Scooty sold.

The total number of Scooty sold by C is how much percentage more/less than the total number of Scooty sold by D?

- a. 15% more
- b. 17.5% more
- c. 22.5% more
- d. 25% less
- e. 33.33% less

12. Questions

The ratio of the number of electric Scooty sold to non-electric Scooty sold by E is 5:2. Find the ratio of the number of electric Scooty sold by E to the total number of Scooty sold by A.

- a. 1:5
- b. 4:5
- c. 5:3
- d. 5:2
- e. 2:3

13. Questions

Out of the total number of Scooty sold by D, 65% are non – electric Scooty. If the ratio of the number of electric Scooty unsold to sold by D is 2:5, then find the total number of electric Scooty (sold + unsold) by D.

- a. 288
- b. 256
- c. 308
- d. 278
- e. 294

14. Questions

If $\frac{11}{20}$ th of total number of Scooty sold by B, are non – electric Scooty, then find the number of electric Scooty sold by B.

- a. 288
- b. 352
- c. 156
- d. 144
- e. 188

15. Questions

Find the average number of Scooty sold by B, C and E.

- a. 540
- b. 560
- c. 550
- d. 600
- e. 630

16. Questions

The time taken by a boat to travel 150 km upstream is same as the time taken to travel 210 km downstream. If the speed of the stream is 6 kmph, then find the speed of the boat in still water.

- a. 40 kmph
- b. 36 kmph
- c. 44 kmph
- d. 33 kmph
- e. 38 kmph

17. Questions

An amount invested on simple interest at $R\%$ p.a. amounts to Rs. 2772 and Rs. 3276 in 4 years and 7 years respectively. Find the value of R .

- a. 8
- b. 10
- c. 11
- d. 12
- e. 5

18. Questions

@RankZenBanker

The present age of Amar is thrice the present age of Neha and the present age of Neha is two – fifth of the present age of Ram. If the age of Ram after 2 years will be 37 years, then find the age of Amar after 10 years.

- a. 53 years
- b. 49 years
- c. 56 years
- d. 66 years
- e. 52 years

19. Questions

120 women working 8 hours per day, can finish a work in 9 days. How many women are required to complete the same work in 15 days given that each of them works for 16 hours in a day?

- a. 38 women
- b. 32 women
- c. 28 women
- d. 36 women

e. 33 women

20. Questions

In a 600 ml mixture of milk and water, the ratio of quantity of milk to that of water is 2:1. If 25% of the mixture is removed and 30 ml of water is added, then find the ratio of quantity of milk to that of water in the final mixture.

- a. 1:2
- b. 4:3
- c. 5:3
- d. 5:4
- e. 2:3

21. Questions

Out of his total income, Rahul spent 20% on rent, 36% of the remaining income on food. Out of the remaining income he spent Rs. 560 on charity and saved the rest. If the amount saved by Rahul is Rs. 2000, then find his income.

- a. Rs. 5400
- b. Rs. 4860
- c. Rs. 5000
- d. Rs. 6400
- e. Rs. 4400

@RankZenBanker

22. Questions

The circumference of a circle, whose radius is 42 cm, is 84 cm more than the perimeter of a square. Find the area of square?

- a. 1969 cm^2
- b. 2036 cm^2
- c. 2169 cm^2
- d. 2025 cm^2
- e. 2196 cm^2

23. Questions

A and B together start a business by investing Rs. $(X - 4000)$ and Rs. $(X + 5000)$. The total amount invested by them is Rs. 51000. If A invests only for 8 months and B invests for 'z' months and the

ratio of profit share of A and B is 2:5 respectively, then find the value of z.

- a. 12
- b. 14
- c. 10
- d. 9
- e. 8

24. Questions

There are x red balls, y black balls and 7 green balls in a bag. The probability of drawing a red ball is $\frac{1}{3}$ while the probability of drawing a black ball is $\frac{1}{5}$. Find the value of x

- a. 3
- b. 6
- c. 8
- d. 2
- e. 5

25. Questions

The ratio of the cost price and the marked price of an article is 4:7. If the article was sold for Rs. 1330 after allowing a discount of 24%, then find the profit earned on selling the article.

- a. Rs. 330
- b. Rs. 296
- c. Rs. 360
- d. Rs. 288
- e. Rs. 308

26. Questions

What value should come in the place of (?) in the following questions?

$$513 \div 19 * ? = 16^2 + 68$$

- a. 13
- b. 9
- c. 8
- d. 12
- e. 15

27. Questions

$$(36\% \text{ of } 450 + ?) \div 4 = 45$$

- a. 18
- b. 22
- c. 13
- d. 10
- e. 25

28. Questions

$$1\frac{2}{11} * 8\frac{5}{9} + 5\frac{8}{9} = ?$$

- a. 21
- b. 24
- c. 16
- d. 19
- e. 11

29. Questions

@RankZenBanker

$$(8 * 7 + 17 * 2) \div (72 - 54) = ?$$

- a. 6
- b. 5
- c. 8
- d. 2
- e. 9

30. Questions

$$(150 \div \sqrt{?}) * 4 = 40$$

- a. 205
- b. 196
- c. 256
- d. 216
- e. 225

31. Questions

$$95 + 78 - 122 + ? = 166$$

- a. 123
- b. 115
- c. 132
- d. 108
- e. 96

32. Questions

$$8^3 - 12^2 * 3 = 2^? * 5$$

- a. 2
- b. 3
- c. 4
- d. 5
- e. 6

33. Questions

$$15 * 60 = ?^3 + 9 * 19$$

- a. 9
- b. 15
- c. 27
- d. 12
- e. 6

@RankZenBanker

34. Questions

$$14 * 6 + ? = 5 * \sqrt{676}$$

- a. 39
- b. 36
- c. 44
- d. 46
- e. 50

35. Questions

$$? + 190 \div 5 = 11^2 - 61$$

- a. 17
- b. 24
- c. 26
- d. 18
- e. 22

Explanations:

1. Questions

In course P

The number of girls who studied = 48

The number of boys who studied = $48/40 * 60 = 72$

The total number of students who studied = $48 + 72 = 120$

In course Q

The number of girls who studied = 90

The number of boys who studied = $90/60 * 40 = 60$

The total number of students who studied = $90 + 60 = 150$

In course R

The number of girls who studied = 40

The number of boys who studied = $40/25 * 75 = 120$

The total number of students who studied = $40 + 120 = 160$

In course S

The number of girls who studied = 140

The number of boys who studied = $140/70 * 30 = 60$

The total number of students who studied = $140 + 60 = 200$

In course T

The number of girls who studied = 72

The number of boys who studied = $72/80 * 20 = 18$

The total number of students who studied = $18 + 72 = 90$

@RankZenBanker

Courses	The number of boys who studied	The number of girls who studied	The total number of students who studied
P	72	48	120
Q	60	90	150
R	120	40	160
S	60	140	200
T	18	72	90

Answer: B

The number of boys who studied in course P = 72

The number of boys who studied offline in course P = $72 * \{1 - (25/100)\} = 72 * (75/100) = 54$

Hence, the correct answer is option B.

2. Questions

In course P

The number of girls who studied = 48

The number of boys who studied = $48/40 * 60 = 72$

The total number of students who studied = $48 + 72 = 120$

In course Q

The number of girls who studied = 90

The number of boys who studied = $90/60 * 40 = 60$

The total number of students who studied = $90 + 60 = 150$

In course R

The number of girls who studied = 40

The number of boys who studied = $40/25 * 75 = 120$

The total number of students who studied = $40 + 120 = 160$

In course S

The number of girls who studied = 140

The number of boys who studied = $140/70 * 30 = 60$

The total number of students who studied = $140 + 60 = 200$

In course T

The number of girls who studied = 72

@RankZenBanker

The number of boys who studied = $72/80 \times 20 = 18$

The total number of students who studied = $18 + 72 = 90$

Courses	The number of boys who studied	The number of girls who studied	The total number of students who studied
P	72	48	120
Q	60	90	150
R	120	40	160
S	60	140	200
T	18	72	90

Answer: D

The number of boys who studied in course U = $72 \times (4/3) = 96$

The total number of students who studied in course U = $96 \times (7/2) = 48 \times 7 = 336$

Hence, the correct answer is option D.

3. Questions

In course P

The number of girls who studied = 48

The number of boys who studied = $48/40 \times 60 = 72$

The total number of students who studied = $48 + 72 = 120$

In course Q

The number of girls who studied = 90

The number of boys who studied = $90/60 \times 40 = 60$

The total number of students who studied = $90 + 60 = 150$

In course R

The number of girls who studied = 40

The number of boys who studied = $40/25 \times 75 = 120$

The total number of students who studied = $40 + 120 = 160$

In course S

The number of girls who studied = 140

The number of boys who studied = $140/70 \times 30 = 60$

The total number of students who studied = $140 + 60 = 200$

@RankZenBanker

In course T

The number of girls who studied = 72

The number of boys who studied = $72/80 * 20 = 18$

The total number of students who studied = $18 + 72 = 90$

Courses	The number of boys who studied	The number of girls who studied	The total number of students who studied
P	72	48	120
Q	60	90	150
R	120	40	160
S	60	140	200
T	18	72	90

Answer: A

The number of boys who studied in course S = 60

The number of girls who studied in course R = 40

The required difference = $60 - 40 = 20$

Hence, the correct answer is option A.

@RankZenBanker

4. Questions

In course P

The number of girls who studied = 48

The number of boys who studied = $48/40 * 60 = 72$

The total number of students who studied = $48 + 72 = 120$

In course Q

The number of girls who studied = 90

The number of boys who studied = $90/60 * 40 = 60$

The total number of students who studied = $90 + 60 = 150$

In course R

The number of girls who studied = 40

The number of boys who studied = $40/25 * 75 = 120$

The total number of students who studied = $40 + 120 = 160$

In course S

The number of girls who studied = 140

The number of boys who studied = $140/70 * 30 = 60$

The total number of students who studied = $140 + 60 = 200$

In course T

The number of girls who studied = 72

The number of boys who studied = $72/80 * 20 = 18$

The total number of students who studied = $18 + 72 = 90$

Courses	The number of boys who studied	The number of girls who studied	The total number of students who studied
P	72	48	120
Q	60	90	150
R	120	40	160
S	60	140	200
T	18	72	90

Answer: E

@RankZenBanker

The number of girls who studied in course T = 72

The total number of students who studied in course Q = 150

The required percentage = $(72/150) * 100 = 48\%$

Hence, the correct answer is option E.

5. Questions

In course P

The number of girls who studied = 48

The number of boys who studied = $48/40 * 60 = 72$

The total number of students who studied = $48 + 72 = 120$

In course Q

The number of girls who studied = 90

The number of boys who studied = $90/60 * 40 = 60$

The total number of students who studied = $90 + 60 = 150$

In course R

The number of girls who studied = 40

The number of boys who studied = $40/25 * 75 = 120$

The total number of students who studied = $40 + 120 = 160$

In course S

The number of girls who studied = 140

The number of boys who studied = $140/70 * 30 = 60$

The total number of students who studied = $140 + 60 = 200$

In course T

The number of girls who studied = 72

The number of boys who studied = $72/80 * 20 = 18$

The total number of students who studied = $18 + 72 = 90$

Courses	The number of boys who studied	The number of girls who studied	The total number of students who studied
P	72	48	120
Q	60	90	150
R	120	40	160
S	60	140	200
T	18	72	90

@RankZenBanker

Answer: A

The total number of students who studied in course P = 120

The total number of students who studied in course R = 160

The required ratio = $120:160 = 3:4$

Hence, the correct answer is option A.

6. Questions

Let the number of red balls sold by D be 'x'

The number of red balls sold by B = $(x + 40)$

The number of green balls sold by C = $(x + 40) * (6/5) = (1.2x + 48)$

The sum of the number of green balls sold by A and C = $100 * 2 = 200$

The number of green balls sold by A = $200 - (1.2x + 48) = 152 - 1.2x$

The number of red balls sold by C = $152 - 1.2x$

The number of red balls sold by A = 40

The number of red balls sold by C = $2 * 40 = 80$

According to the data,

$$152 - 1.2x = 80$$

$$1.2x = 72$$

$$x = 60$$

The number of red balls sold by D = 60

The number of red balls sold by B = $60 + 40 = 100$

The number of green balls sold by A = $152 - (1.2 * 60) = 152 - 72 = 80$

The number of green balls sold by B = $(3/2) * 40 = 60$

The number of green balls sold by D = $60 * (1/2) = 30$

Sellers	The number of red balls sold	The number of green balls sold
A	40	80
B	100	60
C	80	120
D	60	30

@RankZenBanker

Answer: A

The sum of the number of red balls sold by A, C and D together = $40 + 80 + 60 = 180$

The required average = $180/3 = 60$

Hence, the correct answer is option A.

7. Questions

Let the number of red balls sold by D be 'x'

The number of red balls sold by B = $(x + 40)$

The number of green balls sold by C = $(x + 40) * (6/5) = (1.2x + 48)$

The sum of the number of green balls sold by A and C = $100 * 2 = 200$

The number of green balls sold by A = $200 - (1.2x + 48) = 152 - 1.2x$

The number of red balls sold by C = $152 - 1.2x$

The number of red balls sold by A = 40

The number of red balls sold by C = $2 * 40 = 80$

According to the data,

$$152 - 1.2x = 80$$

$$1.2x = 72$$

$$x = 60$$

The number of red balls sold by D = 60

The number of red balls sold by B = $60 + 40 = 100$

The number of green balls sold by A = $152 - (1.2 * 60) = 152 - 72 = 80$

The number of green balls sold by B = $(3/2) * 40 = 60$

The number of green balls sold by D = $60 * (1/2) = 30$

Sellers	The number of red balls sold	The number of green balls sold
A	40	80
B	100	60
C	80	120
D	60	30

Answer: C

The number of red and green balls sold by B = 160

The number of blue balls sold by B = $225 - (100 + 60) = 65$

@RankZenBanker

Hence, the correct answer is option C.

8. Questions

Let the number of red balls sold by D be 'x'

The number of red balls sold by B = $(x + 40)$

The number of green balls sold by C = $(x + 40) * (6/5) = (1.2x + 48)$

The sum of the number of green balls sold by A and C = $100 * 2 = 200$

The number of green balls sold by A = $200 - (1.2x + 48) = 152 - 1.2x$

The number of red balls sold by C = $152 - 1.2x$

The number of red balls sold by A = 40

The number of red balls sold by C = $2 * 40 = 80$

According to the data,

$$152 - 1.2x = 80$$

$$1.2x = 72$$

$$x = 60$$

The number of red balls sold by D = 60

The number of red balls sold by B = $60 + 40 = 100$

The number of green balls sold by A = $152 - (1.2 * 60) = 152 - 72 = 80$

The number of green balls sold by B = $(3/2) * 40 = 60$

The number of green balls sold by D = $60 * (1/2) = 30$

Sellers	The number of red balls sold	The number of green balls sold
A	40	80
B	100	60
C	80	120
D	60	30

Answer: B

The number of red balls sold by B = 100

The number of green balls sold by C = 120

The required ratio = $100:120 = 5:6$

Hence, the correct answer is option B.

9. Questions

@RankZenBanker

Let the number of red balls sold by D be 'x'

The number of red balls sold by B = $(x + 40)$

The number of green balls sold by C = $(x + 40) * (6/5) = (1.2x + 48)$

The sum of the number of green balls sold by A and C = $100 * 2 = 200$

The number of green balls sold by A = $200 - (1.2x + 48) = 152 - 1.2x$

The number of red balls sold by C = $152 - 1.2x$

The number of red balls sold by A = 40

The number of red balls sold by C = $2 * 40 = 80$

According to the data,

$$152 - 1.2x = 80$$

$$1.2x = 72$$

$$x = 60$$

The number of red balls sold by D = 60

The number of red balls sold by B = $60 + 40 = 100$

The number of green balls sold by A = $152 - (1.2 * 60) = 152 - 72 = 80$

The number of green balls sold by B = $(3/2) * 40 = 60$

The number of green balls sold by D = $60 * (1/2) = 30$

Sellers	The number of red balls sold	The number of green balls sold
A	40	80
B	100	60
C	80	120
D	60	30

Answer: E

The number of green balls sold by D = 30

The number of red balls sold by C = 80

The required percentage = $(30/80) * 100 = 37.5\%$

Hence, the correct answer is option E.

10. Questions

Let the number of red balls sold by D be 'x'

The number of red balls sold by B = $(x + 40)$

The number of green balls sold by C = $(x + 40) * (6/5) = (1.2x + 48)$

The sum of the number of green balls sold by A and C = $100 * 2 = 200$

The number of green balls sold by A = $200 - (1.2x + 48) = 152 - 1.2x$

The number of red balls sold by C = $152 - 1.2x$

The number of red balls sold by A = 40

The number of red balls sold by C = $2 * 40 = 80$

According to the data,

$$152 - 1.2x = 80$$

$$1.2x = 72$$

$$x = 60$$

The number of red balls sold by D = 60

The number of red balls sold by B = $60 + 40 = 100$

The number of green balls sold by A = $152 - (1.2 * 60) = 152 - 72 = 80$

The number of green balls sold by B = $(3/2) * 40 = 60$

The number of green balls sold by D = $60 * (1/2) = 30$

@RankZenBanker

Sellers	The number of red balls sold	The number of green balls sold
A	40	80
B	100	60
C	80	120
D	60	30

Answer: D

The number of green balls sold by A = 80

The total number of balls sold by D = 60 + 30 = 90

The required difference = 90 – 80 = 10

Hence, the correct answer is option D.

11. Questions

Companies	The total number of Scooty sold (electric + non – electric) together
A	500
B	640
C	450
D	600
E	560

@RankZenBanker

Answer: D

The total number of Scooty sold by C = 450

The total number of Scooty sold by D = 600

The required percentage = $\{(600 - 450)/600\} * 100$

= $(150/600) * 100$

= 25% less

Hence, the correct answer is option D.

12. Questions

Companies	The total number of Scooty sold (electric + non – electric) together
A	500
B	640
C	450
D	600
E	560

Answer: B

The number of electric Scooty sold by E = $560 * (5/7) = 400$

The total number of Scooty sold by A = 500

The required ratio = $400:500 = 4:5$

Hence, the correct answer is option B.

13. Questions

Companies	The total number of Scooty sold (electric + non – electric) together
A	500
B	640
C	450
D	600
E	560

@RankZenBanker

Answer: E

The number of electric Scooty sold by D = $600 * \{1 - (65/100)\}$

= $600 * (35/100) = 210$

The number of electric Scooty unsold by D = $210 * (2/5) = 84$

The total number of electric Scooty (sold + unsold) by D = $210 + 84 = 294$

Hence, the correct answer is option E.

14. Questions

Companies	The total number of Scooty sold (electric + non – electric) together
A	500
B	640
C	450
D	600
E	560

Answer: A

The number of electric Scooty sold by B = $640 * \{1 - (11/20)\}$
 $= 640 * (9/20) = 288$

Hence, the correct answer is option A.

15. Questions

Companies	The total number of Scooty sold (electric + non – electric) together
A	500
B	640
C	450
D	600
E	560

@RankZenBanker

Answer: C

The average number of Scooty sold by B, C and E = $\{(640 + 450 + 560)/3\} = 1650/3 = 550$

Hence, the correct answer is option C.

16. Questions

Answer: B

Let the speed of the boat in still water be 'b' kmph

According to the question,

$$150/(b - 6) = 210/(b + 6)$$

$$7b - 42 = 5b + 30$$

$$2b = 72$$

$$b = 36$$

The speed of the boat in still water = 36 kmph

Hence, the correct answer is option B.

17. Questions

Answer: A

The interest earned in 3 years = $3276 - 2772 = \text{Rs. } 504$

The interest earned in 1 year = $504/3 = \text{Rs. } 168$

The amount invested = $2772 - (4 * 168) = 2772 - 672 = \text{Rs. } 2100$

$R = (168/2100) * 100 = 8$

Hence, the correct answer is option A.

18. Questions

Answer: E

According to the question,

The present age of Ram = $37 - 2 = 35$ years

The present age of Neha = $(2/5) * 35 = 14$ years

The present age of Amar = $3 * 14 = 42$ years

The age of Amar after 10 years = $42 + 10 = 52$ years

Hence, the correct answer is option E.

19. Questions

@RankZenBanker

Answer: D

$M1 * H1 * D1 = M2 * H2 * D2$

According to the question,

$120 * 8 * 9 = M2 * 16 * 15$

$M2 = 9 * 4 = 36$

The required number of days = 36 days

Hence, the correct answer is option D.

20. Questions

Answer: C

The quantity of milk in 600 ml = $600 * (2/3) = 400$ ml

The quantity of water in 600 ml = $600 - 400 = 200$ ml

When 25% of the mixture removed,

The quantity of the milk, now = $400 * \{1 - (25/100)\} = 300$ ml

The quantity of water, now = $200 * \{1 - (25/100)\} = 150$ ml

The required ratio = $300 : (150 + 30) = 300 : 180 = 5 : 3$

Hence, the correct answer is option C.

21. Questions

Answer: C

Let the total income of Rahul be Rs. x

According to the question,

$$x * \{1 - (20/100)\} * \{1 - (36/100)\} = 2000 + 560$$

$$x * (80/100) * (64/100) = 2560$$

$$x = 5000$$

The total income of Rahul = Rs. 5000

Hence, the correct answer is option C.

22. Questions

Answer: D

Formula:

The perimeter of a square = $4a$

The area of a square = a^2

The circumference of a circle = $2\pi r$

According to the question,

$$2\pi r = 4a + 84$$

$$2 * (22/7) * 42 = 4a + 84$$

$$4a = 264 - 84$$

$$4a = 180$$

$$a = 45$$

The area of a square = $45 * 45 = 2025 \text{ cm}^2$

Hence, the correct answer is option D.

23. Questions

Answer: B

According to the question,

$$X - 4000 + X + 5000 = 51000$$

$$2X = 50000$$

$$X = 25000$$

The amount invested by A and B are Rs. 21000 and Rs. 30000 respectively.

@RankZenBanker

$$(21000 * 8) / (30000 * z) = 2/5$$

$$7 * 4 = 2 * z$$

$$z = 14$$

Hence, the correct answer is option B.

24. Questions

Answer: E

The probability of drawing a green ball = $1 - (1/3 + 1/5)$

$$= 1 - (8/15) = 7/15$$

Let the total number of balls in the bag be 'a'

$$7/a = 7/15$$

$$a = 15$$

According to the question,

$$x/15 = 1/3$$

$$x = 5$$

Hence, the correct answer is option E.

25. Questions

@RankZenBanker

Answer: A

Let the cost price and the marked price of the article be Rs. 4x and Rs. 7x respectively.

According to the question,

$$7x * \{1 - (24/100)\} = 1330$$

$$7x * (76/100) = 1330$$

$$x = 250$$

The cost price of the article = $4 * 250 = \text{Rs. } 1000$

The profit price of the article = $1330 - 1000 = \text{Rs. } 330$

Hence, the correct answer is option A.

26. Questions

Answer: D

$$513 \div 19 * ? = 16^2 + 68$$

$$27 * ? = 256 + 68$$

$$? = 324/27$$

$$? = 12$$

Hence, the correct answer is option D.

27. Questions

Answer: A

$$(36\% \text{ of } 450 + ?) \div 4 = 45$$

$$162 + ? = 180$$

$$? = 180 - 162 = 18$$

Hence, the correct answer is option A.

28. Questions

Answer: C

$$1\frac{2}{11} * 8\frac{5}{9} + 5\frac{8}{9} = ?$$

$$(13/11) * (77/9) + (53/9) = ?$$

$$(91/9) + (53/9) = ?$$

$$144/9 = ?$$

$$? = 16$$

Hence, the correct answer is option C.

29. Questions

Answer: B

$$(8 * 7 + 17 * 2) \div (72 - 54) = ?$$

$$(56 + 34) \div 18 = ?$$

$$90/18 = ?$$

$$? = 5$$

Hence, the correct answer is option B.

30. Questions

Answer: E

$$(150 \div \sqrt{?}) * 4 = 40$$

$$(150 \div \sqrt{?}) = 10$$

$$\sqrt{?} = 15$$

$$? = 225$$

Hence, the correct answer is option E.

31. Questions

Answer: B

@RankZenBanker

$$95 + 78 - 122 + ? = 166$$

$$? = 166 - 51$$

$$? = 115$$

Hence, the correct answer is option B.

32. Questions

Answer: C

$$8^3 - 12^2 * 3 = 2^? * 5$$

$$512 - 144 * 3 = 2^? * 5$$

$$512 - 432 = 2^? * 5$$

$$80/5 = 2^?$$

$$16 = 2^?$$

$$2^4 = 2^?$$

$$? = 4$$

Hence, the correct answer is option C.

33. Questions

Answer: A

$$15 * 60 = ?^3 + 9 * 19$$

$$900 - 171 = ?^3$$

$$?^3 = 729$$

$$? = 9$$

Hence, the correct answer is option A.

34. Questions

Answer: D

$$14 * 6 + ? = 5 * \sqrt{676}$$

$$84 + ? = 5 * 26$$

$$? = 130 - 84$$

$$? = 46$$

Hence, the correct answer is option D.

35. Questions

@RankZenBanker

Answer: E

$$? + 190 \div 5 = 11^2 - 61$$

$$? + 38 = 121 - 61$$

$$? = 60 - 38 = 22$$

Hence, the correct answer is option E.

@RankZenBanker
