

1. Questions

Study the following information carefully and answer the following questions.

The given bar graph shows the total number of doctors and teachers working in five different cities namely A, B, C, D and E respectively and also the number of doctors working in these different cities.

@RankZen Banker

The sum of the total number of doctors and teachers working in cities A and F together is 800, and the ratio of the number of doctors working in city B to F is 4:3. Find the number of teachers working in city F.

- 120
- 60
- 80
- 110
- 100

2. Questions

In city E, the ratio of the number of male doctors to teachers working is 1:2 and the number of female doctors to teachers working is 7:2. Find the number of female doctors working.

- 420
- 360
- 240

d. 720

e. 60

3. Questions

Find the sum of the number of teachers working in cities B, C and D together.

a. 850

b. 990

c. 1020

d. 560

e. 450

4. Questions

Find the difference between the number of doctors working in cities A and E together and the number of teachers working in city A.

a. 360

b. 450

c. 270

d. 210

e. 550

@RankZen Banker

5. Questions

The number of teachers working in city B is what percentage of the total number of doctors and teachers working in city E?

a. 55%

b. 38%

c. 40%

d. 25%

e. 20%

6. Questions

Study the following information carefully and answer the following questions.

The given pie chart shows the percentage distribution of the total number of bags sold in five different shops namely P, Q, R, S and T respectively.

Note:

i). The total number of bags sold in all shops together is 7500.

Percentage distribution of the total number of bags sold

In shop T, three types of bags are sold namely sling bags, travel bags and shoulder bags and the ratio of the number of sling bags, travel bags, and shoulder bags sold is 4:5:6, respectively. Find the difference between the number of travel bags and shoulder bags sold.

@RankZen Banker

- a. 150
- b. 300
- c. 250
- d. 100
- e. 200

7. Questions

The total number of bags sold in shop U is 80% more than that in shop S. Find the total number of bags sold in shop U.

- a. 4050
- b. 3810
- c. 1620
- d. 2100
- e. 3250

8. Questions

Find the ratio of $\frac{1}{x}$ of the total number of bags sold in shop P to $\frac{1}{25}$ of the total number of bags sold in shop Q.

- a. 3:4
- b. 2:3
- c. 6:7
- d. 1:2
- e. 8:9

9. Questions

If the total number of bags sold in shop R is decreased by 195, then find the total number of bags sold in shop R after decreasing.

- a. 880
- b. 720
- c. 930
- d. 560
- e. 810

10. Questions

In shop P, the total number of tables sold is 50% more than that of bags sold. Find the total number of tables sold.

@RankZen Banker

- a. 1025
- b. 1125
- c. 980
- d. 1020
- e. 890

11. Questions

The speed of the boat in still water is 35% more than the speed of the stream. If the time taken by the boat to travel 733.2 km downstream is 5.2 hours, then find the upstream speed of the boat.

- a. 28 km/hr
- b. 21 km/hr
- c. 14 km/hr
- d. 56 km/hr
- e. 35 km/hr

12. Questions

A certain sum becomes three times itself when invested at $(R + 5)\%$ per annum at simple interest for 8 years. Find the value of R.

- a. 20
- b. 15
- c. 30
- d. 25
- e. 18

13. Questions

39 women earned Rs. 98280 by working 21 days. If the daily wages of a man is twice that of a woman, then find how many men must work for 18 days to receive Rs. 540000.

- a. 145
- b. 280
- c. 125
- d. 120
- e. 255

14. Questions

@RankZen Banker

The sum of the length and breadth of the rectangle is 16 cm, the breadth of the rectangle is $\frac{1}{3}$ of its length. If the area of the square is 52 cm^2 more than the area of the rectangle, then find the perimeter of the square.

- a. 80 cm
- b. 44 cm
- c. 32 cm
- d. 40 cm
- e. 96 cm

15. Questions

A $(n + 30)$ kg of a certain variety of rice costing Rs. 52/kg is mixed with n kg of another variety of rice costing Rs. 41/kg. The mixture is sold at the average price of Rs. 49 per kg. Find the value of n .

- a. 8
- b. 3
- c. 11
- d. 13

e. 18

16. Questions

A and B entered into a business by investing Rs. $(x + 250)$ and $(x - 180)$ respectively for 9 months and 12 months respectively. If the ratio of the profit share of A to B is 55:16, then find the value of x.

- a. 350
- b. 280
- c. 200
- d. 450
- e. 300

17. Questions

The average marks obtained by 60 students in a certain examination are 28. The average marks of passed students is 36 and the average marks of failed students is 12. Find the number of failed students.

- a. 18
- b. 20
- c. 30
- d. 25
- e. 40

@RankZen Banker

18. Questions

The cost price of article B is 40% more than that of article A, while the sum of their selling prices is Rs. 1004. If the overall profit earned in the whole transaction is Rs. 44, find the cost price of article B.

- a. Rs.600
- b. Rs.540
- c. Rs.420
- d. Rs.480
- e. Rs.560

19. Questions

The total number of red and green balls in the bag is 28. The number of red balls in the bag is 8 more than the green balls. Find the probability of selecting two green balls in the bag.

- a. $5/42$

- b. 3/19
- c. 11/47
- d. 13/42
- e. 17/42

20. Questions

The difference between the present age of A and B is 44 years. A's age 20 years ago was 240% more than the present age of B. If the present age of C is 20 years less than that of A, then find the present age of C.

- a. 18 years
- b. 34 years
- c. 20 years
- d. 26 years
- e. 33 years

21. Questions

What value should come in the place of (?) in the following questions?

45% of 320 + 30% of 800 - 25 = ?

@RankZen Banker

- a. 359
- b. 228
- c. 425
- d. 400
- e. 278

22. Questions

$(5400/9) * (1/120) = ?/2 - 80$

- a. 170
- b. 210
- c. 245
- d. 80
- e. 98

23. Questions

$32 * 8 + 13 * 15 = ? - 80\% \text{ of } 800$

- a. 998
- b. 1091
- c. 546
- d. 1990
- e. 2100

24. Questions

$$\sqrt{529} * 2 - 18 * 3 + ? = 165$$

- a. 216
- b. 196
- c. 425
- d. 173
- e. 198

25. Questions

$$30\% \text{ of } 1200 + 55\% \text{ of } 700 = ? * 5$$

- a. 156
- b. 198
- c. 149
- d. 215
- e. 200

@RankZen Banker

26. Questions

What approximate value should come in the place of (?) in the following questions?

$$36.12^2 - 12^3 + 18.12 * 3.98 = ?$$

- a. -335
- b. -290
- c. -360
- d. -145
- e. -210

27. Questions

$$\sqrt[3]{(221.12 - \sqrt[3]{(125.12)})} = ? - 21.12\% \text{ of } 300.12$$

- a. 79
- b. 69
- c. 91
- d. 40
- e. 25

28. Questions

$$52.12\% \text{ of } 1200.12 - (256.12)^{1/2} * 3^2 = ?$$

- a. 720
- b. 345
- c. 480
- d. 339
- e. 216

29. Questions

$$(450.12/9.01) * 2.98 + ? = 31.12 * 30.12$$

- a. 520
- b. 620
- c. 750
- d. 920
- e. 780

@RankZen Banker

30. Questions

$$[(320.12/69.12) / (39.89/276.12)] * 16.12 = ?^3$$

- a. 6
- b. 3
- c. 2
- d. 8
- e. 1

31. Questions

What value should come in the place of (?) in the following number series?

2, ?, 28, 66, 144, 302

- a. 10
- b. 14
- c. 22
- d. 5
- e. 6

32. Questions**4, ?, 480, 3840, 23040, 92160**

- a. 86
- b. 48
- c. 36
- d. 24
- e. 240

33. Questions**219, 250, ?, 318, 355, 394**

- a. 283
- b. 298
- c. 305
- d. 301
- e. 300

@RankZen Banker

34. Questions**?, 31, 65, 135, 277, 563**

- a. 18
- b. 15
- c. 9
- d. 12
- e. 25

35. Questions**526, 552, 604, ?, 786, 916**

- a. 682

- b. 725
- c. 688
- d. 656
- e. 732

36. Questions

Find out the wrong number in the following number series.

1321, 990, 723, 502, 333, 206

- a. 1321
- b. 502
- c. 333
- d. 206
- e. 723

37. Questions

720, 80, 560, 112, 336, 332

- a. 80
- b. 560
- c. 336
- d. 332
- e. 720

@RankZen Banker

38. Questions

123, 127, 131, 139, 155, 187

- a. 139
- b. 155
- c. 187
- d. 123
- e. 127

39. Questions

618, 643, 689, 781, 965

- a. 643

- b. 618
- c. 781
- d. 965
- e. 689

40. Questions

720, 667, 608, 547, 483, 409, 336

- a. 336
- b. 720
- c. 483
- d. 547
- e. 409

41. Questions

The following question contains two equations as I and II. You have to solve both equations and determine the relationship between them and give answer as,

i). $x^2 - 17x + 72 = 0$

@RankZen Banker

ii). $3y^2 + 5y - 28 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or relationship cannot be established
- d. $x < y$
- e. $x \leq y$

42. Questions

i). $x^2 + 26x + 153 = 0$

ii). $y^2 + 11y + 18 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or relationship cannot be established
- d. $x < y$
- e. $x \leq y$

43. Questions

i). $23x^2 = 3887$

ii). $y^2 - 14y + 45 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or relationship cannot be established
- d. $x < y$
- e. $x \leq y$

44. Questions

i). $x^2 - 6x - 72 = 0$

ii). $y^2 + 13y + 42 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or relationship cannot be established
- d. $x < y$
- e. $x \leq y$

@RankZen Banker

45. Questions

i). $x^2 - 38x + 357 = 0$

ii). $y^2 - 31y + 240 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or relationship cannot be established
- d. $x < y$
- e. $x \leq y$

Explanations:

1. Questions

In city A:

The total number of doctors and teachers working = 450

The number of doctors working = 180

The number of teachers working = $(450 - 180) = 270$

In city B:

The total number of doctors and teachers working = 720

The number of doctors working = 360

The number of teachers working = $(720 - 360) = 360$

In city C:

The total number of doctors and teachers working = 630

The number of doctors working = 450

The number of teachers working = $(630 - 450) = 180$

In city D:

The total number of doctors and teachers working = 540

The number of doctors working = 90

The number of teachers working = $(540 - 90) = 450$

In city E:

The total number of doctors and teachers working = 900

The number of doctors working = 540

The number of teachers working = $(900 - 540) = 360$

@RankZen Banker

Cities	The total number of doctors and teachers working	The number of doctors working	The number of teachers working
A	450	180	270
B	720	360	360
C	630	450	180
D	540	90	450
E	900	540	360

Answer: C

The sum of the total number of doctors and teachers working in cities A and F together = 800

The total number of doctors and teachers working in city F = $800 - 450 = 350$

The number of doctors working in city F = $360 * \frac{3}{4} = 270$

The number of teachers working in city F = $350 - 270 = 80$

Hence, the correct answer is option C

2. Questions

In city A:

The total number of doctors and teachers working = 450

The number of doctors working = 180

The number of teachers working = $(450 - 180) = 270$

In city B:

The total number of doctors and teachers working = 720

The number of doctors working = 360

The number of teachers working = $(720 - 360) = 360$

In city C:

The total number of doctors and teachers working = 630

The number of doctors working = 450

The number of teachers working = $(630 - 450) = 180$

In city D:

The total number of doctors and teachers working = 540

The number of doctors working = 90

The number of teachers working = $(540 - 90) = 450$

In city E:

The total number of doctors and teachers working = 900

The number of doctors working = 540

The number of teachers working = $(900 - 540) = 360$

@RankZen Banker

Cities	The total number of doctors and teachers working	The number of doctors working	The number of teachers working
A	450	180	270
B	720	360	360
C	630	450	180
D	540	90	450
E	900	540	360

Answer: A

Let, the number of male doctors and teachers working in city E be x and $2x$ respectively.

Let, the number of female doctors and teachers working in city E be $7y$ and $2y$ respectively.

$$x + 7y = 540 \text{ ---> (1)}$$

$$2x + 2y = 360 \text{ ---> (2)}$$

Multiply equation (1) * 2 ,we get

$$2x + 14y = 1080 \text{ ---> (3)}$$

By solving equation (2) and (3), we get

$$14y - 2y = 1080 - 360$$

$$12y = 720$$

$$y = 60$$

and

$$120 + 2x = 360$$

$$2x = 240$$

$$x = 120$$

The number of female doctors working in city E = $7 * 60 = 420$

Hence, the correct answer is option A

3. Questions

In city A:

The total number of doctors and teachers working = 450

The number of doctors working = 180

@RankZen Banker

The number of teachers working = $(450 - 180) = 270$

In city B:

The total number of doctors and teachers working = 720

The number of doctors working = 360

The number of teachers working = $(720 - 360) = 360$

In city C:

The total number of doctors and teachers working = 630

The number of doctors working = 450

The number of teachers working = $(630 - 450) = 180$

In city D:

The total number of doctors and teachers working = 540

The number of doctors working = 90

The number of teachers working = $(540 - 90) = 450$

In city E:

The total number of doctors and teachers working = 900

The number of doctors working = 540

The number of teachers working = $(900 - 540) = 360$

@RankZen Banker

Cities	The total number of doctors and teachers working	The number of doctors working	The number of teachers working
A	450	180	270
B	720	360	360
C	630	450	180
D	540	90	450
E	900	540	360

Answer: B

The sum of the number of teachers working in cities B, C and D together = $(360 + 180 + 450) = 990$

Hence, the correct answer is option B

4. Questions

In city A:

The total number of doctors and teachers working = 450

The number of doctors working = 180

The number of teachers working = $(450 - 180) = 270$

In city B:

The total number of doctors and teachers working = 720

The number of doctors working = 360

The number of teachers working = $(720 - 360) = 360$

In city C:

The total number of doctors and teachers working = 630

The number of doctors working = 450

The number of teachers working = $(630 - 450) = 180$

In city D:

The total number of doctors and teachers working = 540

The number of doctors working = 90

The number of teachers working = $(540 - 90) = 450$

In city E:

The total number of doctors and teachers working = 900

The number of doctors working = 540

The number of teachers working = $(900 - 540) = 360$

@RankZen Banker

Cities	The total number of doctors and teachers working	The number of doctors working	The number of teachers working
A	450	180	270
B	720	360	360
C	630	450	180
D	540	90	450
E	900	540	360

Answer: B

The number of doctors working in cities A and E together = $(180 + 540) = 720$

The number of teachers working in city A = 270

Required difference = $(720 - 270) = 450$

Hence, the correct answer is option B

5. Questions

In city A:

The total number of doctors and teachers working = 450

The number of doctors working = 180

The number of teachers working = $(450 - 180) = 270$

In city B:

The total number of doctors and teachers working = 720

The number of doctors working = 360

The number of teachers working = $(720 - 360) = 360$

In city C:

The total number of doctors and teachers working = 630

The number of doctors working = 450

The number of teachers working = $(630 - 450) = 180$

In city D:

The total number of doctors and teachers working = 540

The number of doctors working = 90

The number of teachers working = $(540 - 90) = 450$

In city E:

The total number of doctors and teachers working = 900

The number of doctors working = 540

The number of teachers working = $(900 - 540) = 360$

@RankZen Banker

Cities	The total number of doctors and teachers working	The number of doctors working	The number of teachers working
A	450	180	270
B	720	360	360
C	630	450	180
D	540	90	450
E	900	540	360

Answer: C

The number of teachers working in city B = 360

The total number of doctors and teachers working in city E = 900

Required percentage = $(360/900) * 100 = 40\%$

Hence, the correct answer is option C

6. Questions

$$10 + 25 + x + 30 + x + 5 = 100$$

$$70 + 2x = 100$$

$$x = 15$$

The total number of bags sold in shop P = $7500 * 10/100 = 750$

The total number of bags sold in shop Q = $7500 * 25/100 = 1875$

The total number of bags sold in shop R = $7500 * 15/100 = 1125$

The total number of bags sold in shop S = $7500 * 30/100 = 2250$

The total number of bags sold in shop T = $7500 * 20/100 = 1500$

@RankZen Banker

Shop	The total number of bags sold
P	750
Q	1875
R	1125
S	2250
T	1500

Answer: D

The total number of bags sold in shop T = 1500

The number of sling bags sold in shop T = $1500 * \frac{4}{15} = 400$

The number of travel bags sold in shop T = $1500 * \frac{5}{15} = 500$

The number of shoulder bags sold in shop T = $1500 * \frac{6}{15} = 600$

Required difference = $600 - 500 = 100$

Hence, the correct answer is option D

7. Questions

$$10 + 25 + x + 30 + x + 5 = 100$$

$$70 + 2x = 100$$

$$x = 15$$

The total number of bags sold in shop P = $7500 * \frac{10}{100} = 750$

The total number of bags sold in shop Q = $7500 * \frac{25}{100} = 1875$

The total number of bags sold in shop R = $7500 * \frac{15}{100} = 1125$

The total number of bags sold in shop S = $7500 * \frac{30}{100} = 2250$

The total number of bags sold in shop T = $7500 * \frac{20}{100} = 1500$

@RankZen Banker

Shop	The total number of bags sold
P	750
Q	1875
R	1125
S	2250
T	1500

Answer: A

The total number of bags sold in shop S = 2250

The total number of bags sold in shop U = $2250 * 180/100 = 4050$

Hence, the correct answer is option A

8. Questions

$$10 + 25 + x + 30 + x + 5 = 100$$

$$70 + 2x = 100$$

$$x = 15$$

The total number of bags sold in shop P = $7500 * 10/100 = 750$

The total number of bags sold in shop Q = $7500 * 25/100 = 1875$

The total number of bags sold in shop R = $7500 * 15/100 = 1125$

The total number of bags sold in shop S = $7500 * 30/100 = 2250$

The total number of bags sold in shop T = $7500 * 20/100 = 1500$

Shop	The total number of bags sold
P	750
Q	1875
R	1125
S	2250
T	1500

Answer: B

@RankZen Banker

$$x = 15$$

$$1/15 \text{ of the total number of bags sold in shop P} = 750/15 = 50$$

$$1/25 \text{ of the total number of bags sold in shop Q} = 1875/25 = 75$$

$$\text{Required ratio} = 50: 75 = 2:3$$

Hence, the correct answer is option B

9. Questions

$$10 + 25 + x + 30 + x + 5 = 100$$

$$70 + 2x = 100$$

$$x = 15$$

$$\text{The total number of bags sold in shop P} = 7500 * 10/100 = 750$$

$$\text{The total number of bags sold in shop Q} = 7500 * 25/100 = 1875$$

$$\text{The total number of bags sold in shop R} = 7500 * 15/100 = 1125$$

$$\text{The total number of bags sold in shop S} = 7500 * 30/100 = 2250$$

$$\text{The total number of bags sold in shop T} = 7500 * 20/100 = 1500$$

Shop	The total number of bags sold
P	750
Q	1875
R	1125
S	2250
T	1500

@RankZen Banker

Answer: C

$$\text{The total number of bags sold in shop R originally} = 1125$$

$$\text{The total number of bags sold in shop R after decreasing} = 1125 - 195 = 930$$

Hence, the correct answer is option C

10. Questions

$$10 + 25 + x + 30 + x + 5 = 100$$

$$70 + 2x = 100$$

$$x = 15$$

$$\text{The total number of bags sold in shop P} = 7500 * 10/100 = 750$$

The total number of bags sold in shop Q = $7500 * 25/100 = 1875$

The total number of bags sold in shop R = $7500 * 15/100 = 1125$

The total number of bags sold in shop S = $7500 * 30/100 = 2250$

The total number of bags sold in shop T = $7500 * 20/100 = 1500$

Shop	The total number of bags sold
P	750
Q	1875
R	1125
S	2250
T	1500

Answer: B

The total number of tables sold in shop P = $750 * 150/100 = 1125$

Hence, the correct answer is option B

@RankZen Banker

11. Questions

Answer: B

The ratio of the speed of the boat in still water to the speed of the stream = $135:100 = 27:20$

Let, the speed of the boat in still water and the speed of the stream is $27x$ km/hr and $20x$ km/hr respectively.

The downstream speed of the boat = $(27x + 20x) = 47x$ km/hr

The upstream speed of the boat = $(27x - 20x) = 7x$ km/hr

$$47x = (733.2)/5.2$$

$$47x = 141$$

$$x = 3$$

The upstream speed of the boat = $7 * 3 = 21$ km/hr

Hence, the correct answer is option B

12. Questions

Answer: A

Let, the sum invested be Rs. x

$$SI = PNR/100$$

$$(x * (R + 5) * 8/100) = 3x - x$$

$$R + 5 = 25$$

$$R = 20$$

Hence, the correct answer is option A

13. Questions

Answer: C

Daily wage of one woman = Total wages / (Number of days * total women)

$$98280 / (39 * 21) = 120$$

$$\text{Daily wage of one man} = 2 * \text{Daily wage of one woman} = 2 * 120 = 240$$

$$\text{The total men} = 540000 / (240 * 18) = 125$$

Hence, the correct answer is option C

14. Questions

Answer: D

The breadth of the rectangle = $1/3$ * the length of the rectangle

The breadth of the rectangle = x cm

The length of the rectangle = $3x$ cm

$$x + 3x = 16$$

$$4x = 16$$

$$x = 4$$

The breadth of the rectangle = $x = 4$ cm

The length of the rectangle = $3x = 12$ cm

The area of the rectangle = $l * b \text{ cm}^2$

$$= 12 * 4 = 48 \text{ cm}^2$$

The area of the square = $48 + 52 = 100 \text{ cm}^2$

The side of the square = $a^2 = 100$

$$a = 10$$

The perimeter of the square = $4a = 4 * 10 = 40$ cm

Hence, the correct answer is option D

15. Questions

Answer: E

@RankZen Banker

According to the question,

$$(n + 30) * 52 + n * 41 = (n + 30 + n) * 49$$

$$52n + 1560 + 41n = (2n + 30) * 49$$

$$93n + 1560 = 98n + 1470$$

$$5n = 90$$

$$n = 18$$

Hence, the correct answer is option E

16. Questions

Answer: E

The ratio of the profit share of A to B = $[(x + 250) * 9] : [(x - 180) * 12]$

$$= [(x + 250) * 3] : [(x - 180) * 4]$$

$$= (3x + 750) : (4x - 720)$$

$$(3x + 750) / (4x - 720) = 55/16$$

$$48x + 12000 = 220x - 39600$$

$$172x = 51600$$

$$x = 300$$

Hence, the correct answer is option E

17. Questions

Answer: B

Let, the number of passed students be x.

According to the question

$$60 * 28 = 36 * x + 12 * (60 - x)$$

$$1680 = 36x + 720 - 12x$$

$$960 = 24x$$

$$x = 40$$

The number of failed students = $60 - 40 = 20$

Hence, the correct answer is option B

18. Questions

Answer: E

Ratio of the cost price of article A and B = 100:140

$$= 5:7$$

@RankZen Banker

The sum of their selling price = Rs. 1004

The sum of their cost price = $1004 - 44 = \text{Rs. } 960$

The cost price of article A = $960 * (5/12) = \text{Rs. } 400$

The cost price of article B = $960 * (7/12) = \text{Rs. } 560$

Hence, the correct answer is option E

19. Questions

Answer: A

The total number of balls in the bag = 28

The number of red balls in the bag = $(28 + 8)/2 = 18$

The number of green balls in the bag = $28 - 18 = 10$

Required probability = $10C_2/28C_2 = (10 * 9)/(28 * 27) = 5/42$

Hence, the correct answer is option A

20. Questions

Answer: B

According to the question

$$A - 20 = (340/100) * B$$

$$A - 20 = 3.4B$$

$$A - 3.4B = 20 \text{ ---> (1)}$$

$$A - B = 44 \text{ -----> (2)}$$

By solving equation (1) and (2), we get

$$2.4B = 24$$

$$B = 10$$

The present age of A = 54 years

The present age of C = $54 - 20 = 34$ years

Hence, the correct answer is option B

21. Questions

Answer: A

$$45\% \text{ of } 320 + 30\% \text{ of } 800 - 25 = ?$$

$$144 + 240 - 25 = ?$$

$$? = 359$$

Hence, the correct answer is option A

@RankZen Banker

22. Questions

Answer: A

$$(5400/9) * (1/120) = ?/2 - 80$$

$$600 * (1/120) + 80 = ?/2$$

$$5 + 80 = ?/2$$

$$85 * 2 = ?$$

$$? = 170$$

Hence, the correct answer is option A

23. Questions

Answer: B

$$32 * 8 + 13 * 15 = ? - 80\% \text{ of } 800$$

$$256 + 195 = ? - 640$$

$$451 + 640 = ?$$

$$? = 1091$$

Hence, the correct answer is option B

24. Questions

Answer: D

$$\sqrt{529} * 2 - 18 * 3 + ? = 165$$

$$23 * 2 - 54 + ? = 165$$

$$46 - 54 + ? = 165$$

$$-8 + ? = 165$$

$$? = 165 + 8$$

$$? = 173$$

Hence, the correct answer is option D

25. Questions

Answer: C

$$30\% \text{ of } 1200 + 55\% \text{ of } 700 = ? * 5$$

$$360 + 385 = ? * 5$$

$$745 = ? * 5$$

$$? = 149$$

Hence, the correct answer is option C

@RankZen Banker

26. Questions

Answer: C

$$36.12^2 - 12^3 + 18.12 * 3.98 = ?$$

$$36^2 - 12^3 + 18 * 4 = ?$$

$$1296 - 1728 + 72 = ?$$

$$? = -360$$

Hence, the correct answer is option C

27. Questions

Answer: B

$$\sqrt[3]{(221.12 - \sqrt[3]{(125.12)})} = ? - 21.12\% \text{ of } 300.12$$

$$\sqrt[3]{(221 - \sqrt[3]{(125)})} = ? - 21\% \text{ of } 300$$

$$\sqrt[3]{(221 - 5)} = ? - 63$$

$$\sqrt[3]{216} = ? - 63$$

$$6 = ? - 63$$

$$? = 69$$

Hence, the correct answer is option B

28. Questions

Answer: C

$$52.12\% \text{ of } 1200.12 - (256.12)^{1/2} * 3^2 = ?$$

$$52\% \text{ of } 1200 - (256)^{1/2} * 3^2 = ?$$

$$624 - 16 * 9 = ?$$

$$? = 624 - 144$$

$$? = 480$$

Hence, the correct answer is option C

29. Questions

Answer: E

$$(450.12/9.01) * 2.98 + ? = 31.12 * 30.12$$

$$(450/9) * 3 + ? = 31 * 30$$

$$50 * 3 + ? = 930$$

@RankZen Banker

$$150 + ? = 930$$

$$? = 780$$

Hence, the correct answer is option E

30. Questions

Answer: D

$$[(320.12/69.12) / (39.89/276.12)] * 16.12 = ?^3$$

$$[(320/69) / (40/276)] * 16 = ?^3$$

$$[(320/69) * (276 /40)] * 16 = ?^3$$

$$8 * 4 * 16 = ?^3$$

$$32 * 16 = ?^3$$

$$?^3 = 512$$

$$? = 8$$

Hence, the correct answer is option D

31. Questions

Answer: A

$$(2 * 2) + 6 = 10$$

$$(10 * 2) + 8 = 28$$

$$(28 * 2) + 10 = 66$$

$$(66 * 2) + 12 = 144$$

$$(144 * 2) + 14 = 302$$

Or

2	10	28	66	144	302
	8	18	38	78	158
	10	20	40	80	

Hence, the correct answer is option A

32. Questions

Answer: B

$$4 * 12 = 48$$

$$48 * 10 = 480$$

$$480 * 8 = 3840$$

@RankZen Banker

$$3840 * 6 = 23040$$

$$23040 * 4 = 92160$$

Hence, the correct answer is option B

33. Questions

Answer: A

$$15^2 - 6 = 219$$

$$16^2 - 6 = 250$$

$$17^2 - 6 = \mathbf{283}$$

$$18^2 - 6 = 318$$

$$19^2 - 6 = 355$$

$$20^2 - 6 = 394$$

Or

$$219 + 31 = 250$$

$$250 + 33 = 283$$

$$283 + 35 = 318$$

$$318 + 37 = 355$$

$$355 + 39 = 394$$

Hence, the correct answer is option A

34. Questions

Answer: B

$$(15 * 2) + 1 = 31$$

$$(31 * 2) + 3 = 65$$

$$(65 * 2) + 5 = 135$$

$$(135 * 2) + 7 = 277$$

$$(277 * 2) + 9 = 563$$

Hence, the correct answer is option B

35. Questions

Answer: A

$$526 + (13*2) = 552$$

$$552 + (13*4) = 604$$

@RankZen Banker

$$604 + (13 \times 6) = \mathbf{682}$$

$$682 + (13 \times 8) = 786$$

$$786 + (13 \times 10) = 916$$

Hence, the correct answer is option A

36. Questions

Answer: E

$$11^3 - 10 = 1321$$

$$10^3 - 10 = 990$$

$$9^3 - 10 = \mathbf{719}$$

$$8^3 - 10 = 502$$

$$7^3 - 10 = 333$$

$$6^3 - 10 = 206$$

Hence, the correct answer is option E

37. Questions

Answer: D

$$720/9 = 80$$

$$80 \times 7 = 560$$

$$560/5 = 112$$

$$112 \times 3 = 336$$

$$336/1 = \mathbf{336}$$

Hence, the correct answer is option D

38. Questions

Answer: D

$$\mathbf{125} + 2^1 = 127$$

$$127 + 2^2 = 131$$

$$131 + 2^3 = 139$$

$$139 + 2^4 = 155$$

$$155 + 2^5 = 187$$

@RankZen Banker

Hence, the correct answer is option D

39. Questions

Answer: B

$$\begin{array}{ccccc}
 620 & 643 & 689 & 781 & 965 \\
 23 & 46 & 92 & 184 & \\
 *2 & *2 & *2 & &
 \end{array}$$

Hence, the correct answer is option B

40. Questions

Answer: C

$$720 - 53 = 667$$

$$667 - 59 = 608$$

$$608 - 61 = 547$$

$$547 - 67 = \mathbf{480}$$

$$480 - 71 = 409$$

$$409 - 73 = 336$$

Hence, the correct answer is option C

@RankZen Banker

41. Questions

Answer: A

i). $x^2 - 17x + 72 = 0$

$$x^2 - 8x - 9x + 72 = 0$$

$$x(x - 8) - 9(x - 8) = 0$$

$$(x - 8)(x - 9) = 0$$

$$x = 8, 9$$

ii). $3y^2 + 5y - 28 = 0$

$$3y^2 + 12y - 7y - 28 = 0$$

$$3y(y + 4) - 7(y + 4) = 0$$

$$(3y - 7)(y + 4) = 0$$

$$y = 7/3, -4$$

Thus, $x > y$

Hence, the correct answer is option A

42. Questions

Answer: E

i). $x^2 + 26x + 153 = 0$

$$x^2 + 17x + 9x + 153 = 0$$

$$x(x + 17) + 9(x + 17) = 0$$

$$(x + 17)(x + 9) = 0$$

$$x = -17, -9$$

ii). $y^2 + 11y + 18 = 0$

$$y^2 + 9y + 2y + 18 = 0$$

$$y(y + 9) + 2(y + 9) = 0$$

$$(y + 9)(y + 2) = 0$$

$$y = -9, -2$$

Thus, $x \leq y$

Hence, the correct answer is option E

43. Questions

Answer: C

i). $23x^2 = 3887$

$$x^2 = 169$$

$$x = -13, 13$$

ii). $y^2 - 14y + 45 = 0$

$$y^2 - 9y - 5y + 45 = 0$$

$$y(y - 9) - 5(y - 9) = 0$$

$$(y - 9)(y - 5) = 0$$

$$y = 9, 5$$

Thus, the relationship between x and y cannot be established.

Hence, the correct answer is option C

44. Questions

Answer: B

i). $x^2 - 6x - 72 = 0$

@RankZen Banker

$$x^2 - 12x + 6x - 72 = 0$$

$$x(x - 12) + 6(x - 12) = 0$$

$$(x - 12)(x + 6) = 0$$

$$x = 12, -6$$

$$\text{ii). } y^2 + 13y + 42 = 0$$

$$y^2 + 7y + 6y + 42 = 0$$

$$y(y + 7) + 6(y + 7) = 0$$

$$(y + 7)(y + 6) = 0$$

$$y = -6, -7$$

Thus, $x \geq y$

Hence, the correct answer is option B

45. Questions

Answer: A

$$\text{i). } x^2 - 38x + 357 = 0$$

$$x^2 - 21x - 17x + 357 = 0$$

$$x(x - 21) - 17(x - 21) = 0$$

$$(x - 21)(x - 17) = 0$$

$$x = 21, 17$$

$$\text{ii). } y^2 - 31y + 240 = 0$$

$$y^2 - 16y - 15y + 240 = 0$$

$$y(y - 16) - 15(y - 16) = 0$$

$$(y - 16)(y - 15) = 0$$

$$y = 16, 15$$

Thus, $x > y$

Hence, the correct answer is option A.

@RankZen Banker
