REVISION SHEET (PART - 1)

WITH DETAILED SOLUTIONS

KAUSHIK MOHANTY

More than 8 Years Experience

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

- 1) The age of Raj in 2017 was 5 years more than the age of Sam in 2020. The age of Raj in 2022 is double the age of Sam in 2010. Find the sum of the ages of Raj and Sam in 2022.

2017 में राज की आयु 2020 में सैम की आयु से 5 वर्ष अधिक थी। 2022 में राज की आयु 2010 में सैम की आयु से दोगुनी है। 2022 में राज और सैम की आयु का योग ज्ञात कीजिए।

- a) 72
- b) 60
- c) 84
- d) 96
- e) None of these

- 2) In 2016, the ratio of the ages of two software engineers, Aarav and Kunal, was 7 : 5. By 2020, the ratio of their ages had changed to 4 : 3. What was the ratio of their ages back in 2010?

2016 में, दो सॉफ्टवेयर इंजीनियरों, आरव और कुणाल की आयु का अनुपात 7: 5 था। 2020 तक, उनकी आयु का अनुपात 4: 3 हो गया था। 2010 में उनकी आयु का अनुपात क्या था?

- a) 11 : 7
- b) 12 : 7
- c) 10 : 9
- d) 9 : 7
- e) None of these

- 3) The current age ratio of two marketing executives, Arjun and Bhavesh, is 4:5, while Bhavesh and Chirag have their present age ratio as 2:3. After 4 years, the ratio of Arjun's age to Chirag's age will become 10:17. What is Bhavesh's current age?

दो मार्केटिंग अधिकारियों, अर्जुन और भावेश की वर्तमान आयु का अनुपात 4:5 है, जबकि भावेश और चिराग की वर्तमान आयु का अनुपात 2:3 है। 4 साल बाद, अर्जुन की आयु और चिराग की आयु का अनुपात 10:17 हो जाएगा। भावेश की वर्तमान आयु क्या है?

- a) 18
- b) 22
- c) 20
- d) 25
- e) None of these

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

- 4) The ratio between the ages of Arjun and Ravi five years ago was 4:7. The sum of their ages three years from now will be 71 years. What percentage of the present age of Ravi is the present age of Arjun?
पांच साल पहले अर्जुन और रवि की आयु का अनुपात 4:7 था। अब से तीन साल बाद उनकी आयु का योग 71 वर्ष होगा। रवि की वर्तमान आयु अर्जुन की वर्तमान आयु का कितना प्रतिशत है?
- a) 50%
 - b) 60%
 - c) 70%
 - d) 62.5%.
 - e) None of these
- 5) The ratio of the present age of Aman to the age of Aryan 5 years ago is 7:8, and the current age ratio of Aman to Rahul is 7:5. If Rahul's age is 20 years less than Aryan's, find the present age of Rahul.
अमन की वर्तमान आयु का आर्यन की 5 वर्ष पहले की आयु से अनुपात 7:8 है, तथा अमन की वर्तमान आयु का राहुल से अनुपात 7:5 है। यदि राहुल की आयु आर्यन की आयु से 20 वर्ष कम है, तो राहुल की वर्तमान आयु ज्ञात कीजिए।
- a) 25
 - b) 30
 - c) 35
 - d) 40
 - e) None of these
- 6) The ratio between the age of Rajeev and his father is 2:7. Rajeev's father was 35 years old when Rajeev was born, and Rajeev's sister is 5 years younger than Rajeev. Find the ratio of the age of Rajeev's sister and Rajeev's father after 1 year.
राजीव और उसके पिता की आयु के बीच का अनुपात 2:7 है। राजीव के जन्म के समय राजीव के पिता की आयु 35 वर्ष थी, और राजीव की बहन राजीव से 5 वर्ष छोटी है। 1 वर्ष बाद राजीव की बहन और राजीव के पिता की आयु का अनुपात ज्ञात कीजिए।
- a) 2: 3
 - b) 1: 5
 - c) 2: 5
 - d) 3: 4
 - e) 1: 4

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

- 7) The current age ratio between two architects, Raghav and Arjun, is 11:9. The average of their ages after 5 years will be 35 years. What will be Arjun's age after 10 years?

दो आर्किटेक्ट, राघव और अर्जुन के बीच वर्तमान आयु का अनुपात 11:9 है। 5 वर्ष बाद उनकी आयु का औसत 35 वर्ष होगा। 10 वर्ष बाद अर्जुन की आयु क्या होगी?

- a) 32
- b) 34
- c) 37
- d) 30
- e) None of these

- 8) The current age of Rahul is five times the present age of Priya. Three years from now, the ratio of their ages will be 4:1. What will be the ratio of their ages eleven years from now?

राहुल की वर्तमान आयु प्रिया की वर्तमान आयु से पाँच गुना है। अब से तीन वर्ष बाद, उनकी आयु का अनुपात 4:1 होगा। अब से ग्यारह वर्ष बाद उनकी आयु का अनुपात क्या होगा?

- a) 15:7
- b) 13:3
- c) 16:5
- d) 14:5
- e) None of these

- 9) The ratio between the age of a manager and assistant is 5:2. If the junior employee is 3 years younger than the assistant and the senior employee is 3 years younger than the manager. If the ratio between the ages of the senior and junior employee is 3:1, Find the present age of the manager.

एक प्रबंधक और सहायक की आयु के बीच का अनुपात 5:2 है। यदि कनिष्ठ कर्मचारी सहायक से 3 वर्ष छोटा है और वरिष्ठ कर्मचारी प्रबंधक से 3 वर्ष छोटा है। यदि वरिष्ठ और कनिष्ठ कर्मचारी की आयु के बीच का अनुपात 3:1 है, तो प्रबंधक की वर्तमान आयु ज्ञात कीजिए।

- a) 40
- b) 45
- c) 50
- d) 30
- e) None of these

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

- 10) The present age of A is thrice that of B. The ratio of the age of A after 5 years to the age of C before 3 years is 7: 5. If C is 8 years older than double the age of B, what will be the age of A after 7 years (in years)?

A की वर्तमान आयु B की तीन गुनी है। 5 वर्ष बाद A की आयु का 3 वर्ष पहले C की आयु से अनुपात 7:5 है। यदि C, B की आयु के दोगुने से 8 वर्ष बड़ा है, तो 7 वर्ष बाद A की आयु (वर्षों में) क्या होगी?

- a) 59
- b) 60
- c) 42
- d) 37
- e) 25

- 11) The average of the present age of A, B and C is 22 years. The present age of B is 12 years more than the age of A. The ratio of the age of A before 1 year to the present age of C is 4: 5. What is the present age of C (in years)?

A, B और C की वर्तमान आयु का औसत 22 वर्ष है। B की वर्तमान आयु A की आयु से 12 वर्ष अधिक है। 1 वर्ष पहले A की आयु और C की वर्तमान आयु का अनुपात 4: 5 है। C की वर्तमान आयु (वर्षों में) क्या है?

- a) 20
- b) 24
- c) 15
- d) 22
- e) 25

- 12) The ratio of the present age of A and B is 11: 19. The age of C, 6 years later will be the average value of the present age A and B. The present age of C is the same as the age of A after 6 years. Find the average value of the present age of A, B and C (in years).

A और B की वर्तमान आयु का अनुपात 11:19 है। 6 वर्ष बाद C की आयु, A और B की वर्तमान आयु का औसत मान होगी। C की वर्तमान आयु, 6 वर्ष बाद A की आयु के बराबर है। A, B और C की वर्तमान आयु का औसत मान (वर्षों में) ज्ञात कीजिए।

- a) 65
- b) 80
- c) 29
- d) 43

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

e) 35

- 13) The ratio of ages of A and B, 2 years later is 5: 9. The present age of C is 6 years more than the age of A after 2 years. The ratio of the age of B 3 years ago to the age of C 9 years later is 1: 1. Find the present age of A (in years).
2 वर्ष बाद A और B की आयु का अनुपात 5:9 है। C की वर्तमान आयु 2 वर्ष बाद A की आयु से 6 वर्ष अधिक है। 3 वर्ष पहले B की आयु और 9 वर्ष बाद C की आयु का अनुपात 1:1 है। A की वर्तमान आयु (वर्षों में) ज्ञात कीजिए।

- a) 27
- b) 21
- c) 25
- d) 20
- e) 23

- 14) C is 2 years older than A. The ratio of the ages of A and B, 3 years ago is 4: 5. The age of A after 2 years is the same as the age of B 4 years ago. Find the ratio of the age of A after 3 years to the age of C after 6 years.
C, A से 2 वर्ष बड़ा है। 3 वर्ष पहले A और B की आयु का अनुपात 4:5 है। 2 वर्ष बाद A की आयु, 4 वर्ष पहले B की आयु के बराबर है। 3 वर्ष बाद A की आयु का 6 वर्ष बाद C की आयु से अनुपात ज्ञात कीजिए।

- a) 2: 1
- b) 6: 7
- c) 7: 6
- d) 9: 10
- e) 17: 20

- 15) The ratio of the age of A 6 years ago to the age of B 2 years later is 1: 3. The ratio of the age of C after 3 years to the age of B 4 years later is 3: 4. If the present age of C is the average of age of A and B, what will be the ratio of the age of A after 4 years to the age of B 6 years ago?
6 वर्ष पहले A की आयु का 2 वर्ष बाद B की आयु से अनुपात 1:3 है। 3 वर्ष बाद C की आयु का 4 वर्ष बाद B की आयु से अनुपात 3:4 है। यदि C की वर्तमान आयु A और B की आयु का औसत है, तो 4 वर्ष बाद A की आयु का 6 वर्ष पहले B की आयु से अनुपात क्या होगा?

- a) 16: 19
- b) 11: 12
- c) 11: 17

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

d) 10: 11

e) 12: 17

- 16) The present age of B is 10 years less than that of A. The average of the present age of A, B and C is 28 years. The ratio of the age of A 5 years ago to the age of C 4 years later is 4: 3. What is the ratio of the age of A 1 year ago to the age of B 3 years later?

B की वर्तमान आयु A की आयु से 10 वर्ष कम है। A, B और C की वर्तमान आयु का औसत 28 वर्ष है। 5 वर्ष पहले A की आयु का 4 वर्ष बाद C की आयु से अनुपात 4:3 है। 1 वर्ष पहले A की आयु का 3 वर्ष बाद B की आयु से अनुपात क्या है?

a) 6: 11

b) 6: 5

c) 5: 8

d) 4: 7

e) 5: 7

- 17) The ratio of the age of A 2 years ago, the age of B 2 years later, and the present age of C is 3: 5: 4. The ratio of the present age of A and B is 2: 3. Find the sum of the present ages of A, B and C (in years).

A की 2 वर्ष पहले की आयु, B की 2 वर्ष बाद की आयु तथा C की वर्तमान आयु का अनुपात 3:5:4 है। A तथा B की वर्तमान आयु का अनुपात 2:3 है। A, B तथा C की वर्तमान आयु का योग (वर्षों में) ज्ञात कीजिए।

a) 160

b) 140

c) 170

d) 120

e) 105

- 18) The ratio of age of A and B, 3 years ago is 5: 4. The present age of C is the same as the age of B 8 years ago. If the ratio of the age of C after 2 years to the age of B 1 year ago is 5: 6, find the average of the ages of A and B after 3 years (in years).

3 वर्ष पहले A और B की आयु का अनुपात 5:4 है। C की वर्तमान आयु 8 वर्ष पहले B की आयु के समान है। यदि 2 वर्ष बाद C की आयु का 1 वर्ष पहले B की आयु से अनुपात 5:6 है, तो 3 वर्ष बाद A और B की आयु का औसत (वर्षों में) ज्ञात कीजिए।

a) 39

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

- b) 28
- c) 37.5
- d) 40
- e) 35

19) Six years ago, the ratio of the ages of Priya and Neel was 3:5. Six years from now, their ages will be in the ratio 5:7. What is the sum of their current ages?
छह साल पहले, प्रिया और नील की आयु का अनुपात 3:5 था। अब से छह साल बाद, उनकी आयु का अनुपात 5:7 होगा। उनकी वर्तमान आयु का योग क्या है?

- a) 48
- b) 54
- c) 56
- d) 60
- e) None of these

20) The average age of Arjun, Simran, and Ravi is 36 years. The ratio of Arjun's age to Simran's age is 5:4, and the ratio of Simran's age to Ravi's age is 4:3. What is Ravi's age?

अर्जुन, सिमरन और रवि की औसत आयु 36 वर्ष है। अर्जुन की आयु का सिमरन की आयु से अनुपात 5:4 है, तथा सिमरन की आयु का रवि की आयु से अनुपात 4:3 है। रवि की आयु क्या है?

- a) 27
- b) 30
- c) 24
- d) 33
- e) None of these

21) In a certain village, Alice is 8 years older than Bob, and Bob is 10 years younger than Charlie. If the total sum of their ages is 90 years, what will be Bob's age after 10 years?

एक निश्चित गाँव में, ऐलिस बॉब से 8 वर्ष बड़ी है, और बॉब चार्ली से 10 वर्ष छोटा है। यदि उनकी आयु का कुल योग 90 वर्ष है, तो 10 वर्ष बाद बॉब की आयु क्या होगी?

- a) 34
- b) 36
- c) 38
- d) 40

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

- e) None of these
- 22) The ratio of the ages of Ramesh and Suresh is 5:3. Ten years ago, Ramesh's age was equal to Suresh's current age. What is the sum of their ages?
रमेश और सुरेश की आयु का अनुपात 5:3 है। दस वर्ष पहले, रमेश की आयु सुरेश की वर्तमान आयु के बराबर थी। उनकी आयु का योग क्या है?
- a) 40
b) 45
c) 50
d) 55
e) None of these
- 23) The ages of Ravi and Mohan are in the ratio of 3:4. After 10 years, the ratio of their ages will be 5:6. What is the difference in their ages?
रवि और मोहन की आयु का अनुपात 3:4 है। 10 वर्ष बाद उनकी आयु का अनुपात 5:6 हो जाएगा। उनकी आयु में क्या अंतर है?
- a) 5
b) 10
c) 7
d) 8
e) None of these
- 24) The ratio of the ages of person A to person B is 4:3, and after 8 years, the ratio of their ages will be 5:4. What was the ratio of their ages 12 years ago?
व्यक्ति A और व्यक्ति B की आयु का अनुपात 4:3 है, तथा 8 वर्ष बाद उनकी आयु का अनुपात 5:4 हो जाएगा। 12 वर्ष पहले उनकी आयु का अनुपात क्या था?
- a) 5:3
b) 4:3
c) 3:2
d) 6:5
e) None of these
- 25) Rohit is currently 11 years older than Sameer. Karan's present age is twice that of Sameer. If the average of their present ages is 33 years, what is Rohit's current age?

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

रोहित वर्तमान में समीर से 11 वर्ष बड़ा है। करण की वर्तमान आयु समीर से दोगुनी है। यदि उनकी वर्तमान आयु का औसत 33 वर्ष है, तो रोहित की वर्तमान आयु क्या है?

- a) 33
- b) 38
- c) 40
- d) 44
- e) None of these

26) 46 years ago, Tal was thrice as old as Vishy was. 63 years ago, Kas was half as old as Tal. 2 years in the future the combined ages of Kas and Tal is 145. If Vishy was born in 1950, what is the year now?

46 वर्ष पहले, ताल की आयु विशी की आयु की तीन गुनी थी। 63 वर्ष पहले, कास की आयु ताल की आयु की आधी थी। 2 वर्ष बाद, कास और ताल की संयुक्त आयु 145 वर्ष है। यदि विशी का जन्म 1950 में हुआ था, तो अब कौन सा वर्ष है?

- a) 2005
- b) 2015
- c) 2014
- d) 2010
- e) None of the above

27) A person was asked to state his age in years. His reply was, 'Take my age three years hence, multiply it by 3 and then subtract three times my age three years ago and you will know how old I am.' What was the age of the person?

एक व्यक्ति से उसकी उम्र वर्षों में बताने को कहा गया। उसका उत्तर था, 'मेरी उम्र तीन वर्ष बाद लें, उसे 3 से गुणा करें और फिर उसमें से तीन वर्ष पहले की उम्र का तीन गुना घटाएँ, तब आपको पता चलेगा कि मेरी उम्र कितनी है।' उस व्यक्ति की उम्र क्या थी?

- a) 18 years
- b) 15 years
- c) 16 years
- d) 17 years
- e) None of the above

28) The product of the present ages of Rahul and Priya is 1024, and the ratio of their ages is 4:1. How old will Rahul be 18 years from now?

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

राहुल और प्रिया की वर्तमान आयु का गुणनफल 1024 है, तथा उनकी आयु का अनुपात 4:1 है। 18 वर्ष बाद राहुल की आयु कितनी होगी?

- a) 80 years
- b) 82 years
- c) 84 years
- d) 88 years
- e) None of these

29) The ratio of the ages of Arjun and his father is 2:7. After 12 years, the ratio of their ages will be 4:9. Based on this information, what was the average of their ages 6 years ago?

अर्जुन और उसके पिता की आयु का अनुपात 2:7 है। 12 वर्ष बाद उनकी आयु का अनुपात 4:9 हो जाएगा। इस जानकारी के आधार पर, 6 वर्ष पहले उनकी आयु का औसत क्या था?

- a) 20 years
- b) 21 years
- c) 22 years
- d) 23 years
- e) None of these

30) A decade ago, the age of person A was the same as the age of person B will be in 8 years. In 14 years, the ratio of their ages will be 7:5. What will be the age of B after 8 years?

एक दशक पहले, व्यक्ति A की आयु उतनी ही थी जितनी 8 वर्ष बाद व्यक्ति B की होगी। 14 वर्ष बाद, उनकी आयु का अनुपात 7:5 होगा। 8 वर्ष बाद B की आयु क्या होगी?

- a) 39
- b) 40
- c) 38
- d) 41
- e) None of these

31) The ratio of the ages of person A and person B is 5:6, and the ratio of the ages of person B and person C is 2:3. If the difference between the ages of A and C is 18 years, what is the sum of their ages?

व्यक्ति A और व्यक्ति B की आयु का अनुपात 5:6 है, तथा व्यक्ति B और व्यक्ति C की आयु का अनुपात 2:3 है। यदि A और C की आयु के बीच का अंतर 18 वर्ष है, तो उनकी आयु का योग क्या है?

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

- a) 90
- b) 91
- c) 92
- d) 93
- e) None of these

32) After 6 years, the ratio of the ages of Arun and Suman will be 5:7. In 8 years, Arun's age will be equal to Suman's present age. What is the ratio of the present age of Suman to Arun?

6 वर्ष बाद, अरुण और सुमन की आयु का अनुपात 5:7 होगा। 8 वर्ष बाद, अरुण की आयु सुमन की वर्तमान आयु के बराबर होगी। सुमन की वर्तमान आयु का अरुण से अनुपात क्या है?

- a) 11:7
- b) 7:11
- c) 5:7
- d) 3:5
- e) None of these

33) The age of Arjun is 120% of Bhavin's age, and Bhavin's age is 125% of Chirag's age. If the average age of Arjun, Bhavin, and Chirag is 25 years, what is 50% of Chirag's age?

अर्जुन की आयु भाविन की आयु का 120% है, और भाविन की आयु चिराग की आयु का 125% है। यदि अर्जुन, भाविन और चिराग की औसत आयु 25 वर्ष है, तो चिराग की आयु का 50% क्या है?

- a) 10
- b) 15
- c) 12
- d) 20
- e) None of these

34) The average present age of Raj, Simran, and Deepak is 30 years. The ratio of the present ages of Simran and Deepak is 3:4. After 8 years, the ratio of Simran and Deepak will be 4:5. What is the present age of Raj?

राज, सिमरन और दीपक की औसत वर्तमान आयु 30 वर्ष है। सिमरन और दीपक की वर्तमान आयु का अनुपात 3:4 है। 8 वर्ष बाद, सिमरन और दीपक का अनुपात 4:5 हो जाएगा। राज की वर्तमान आयु क्या है?

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

- a) 34
- b) 36
- c) 38
- d) 32
- e) None of these

35) The present age of A is thrice the present age of B. The ratio of the age of B after 10 years and the age of A before 10 years is 9: 7. If the sum of the present age of A and C is 42 years, what will be the age of B and C after 4 years?

A की वर्तमान आयु B की वर्तमान आयु से तीन गुनी है। 10 वर्ष बाद B की आयु और 10 वर्ष पहले A की आयु का अनुपात 9:7 है। यदि A और C की वर्तमान आयु का योग 42 वर्ष है, तो 4 वर्ष बाद B और C की आयु क्या होगी?

- a) 30 years
- b) 26 years
- c) 32 years
- d) 34 years
- e) 38 years

36) The average present age of A, B, and C is 19 years. The ratio of age of A before 2 years, the age of B before 2 years, and the age of C before one year is 3: 4: 6. Find the average age of A after 3 years, B after 2 years, and C before 8 years (in years).

A, B और C की औसत वर्तमान आयु 19 वर्ष है। 2 वर्ष पहले A की आयु, 2 वर्ष पहले B की आयु और एक वर्ष पहले C की आयु का अनुपात 3: 4: 6 है। 3 वर्ष बाद A की, 2 वर्ष बाद B की और 8 वर्ष पहले C की औसत आयु (वर्षों में) ज्ञात कीजिए।

- a) 18
- b) 24
- c) 36
- d) 29
- e) 37

37) The age of C after 8 years is 1 year less than the total sum of the present age of A and B. The ratio of A's age 1 year later, B's age 3 years later and C's age 3 years later is 5: 4: 7. Find the average age of A after 5 years and B after 10 years (in years).

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

8 वर्ष बाद C की आयु A और B की वर्तमान आयु के कुल योग से 1 वर्ष कम है। A की 1 वर्ष बाद की आयु, B की 3 वर्ष बाद की आयु और C की 3 वर्ष बाद की आयु का अनुपात 5: 4: 7 है। 5 वर्ष बाद A की और 10 वर्ष बाद B की औसत आयु (वर्षों में) ज्ञात कीजिए।

- a) 39
- b) 40
- c) 29
- d) 28
- e) 35

38) The ratio of the age of A before 2 years, the present age of B and the age of C after 3 years is 9: 12: 16. The present age of C is 15 years less than the total sum of the present age of A and B. Find the ratio of age of A after 2 years and C after 1 year.

2 वर्ष पहले A की आयु, B की वर्तमान आयु तथा 3 वर्ष बाद C की आयु का अनुपात 9:12:16 है। C की वर्तमान आयु A और B की वर्तमान आयु के कुल योग से 15 वर्ष कम है। 2 वर्ष बाद A की आयु तथा 1 वर्ष बाद C की आयु का अनुपात ज्ञात कीजिए।

- a) 22: 27
- b) 21: 11
- c) 4: 5
- d) 4: 3
- e) 11: 15

39) The ratio of the present age of Dev, the age of Deep 4 years later, the age of Deepak 2 years ago and the age of Deepta 5 years ago is 5: 7: 8: 9. The sum of the present age of Dev and Deep is 10 years more than the present age of Deepak. Find the sum of the present age of Deepta and Deep in years.

देव की वर्तमान आयु, दीप की 4 वर्ष बाद की आयु, दीपक की 2 वर्ष पहले की आयु तथा दीप्ता की 5 वर्ष पहले की आयु का अनुपात 5: 7: 8: 9 है। देव और दीप की वर्तमान आयु का योग दीपक की वर्तमान आयु से 10 वर्ष अधिक है। दीप्ता और दीप की वर्तमान आयु का वर्षों में योग ज्ञात कीजिए।

- a) 47
- b) 65
- c) 68
- d) 59
- e) 63

- 86) In a startup team, the ages of the founder Ankit, his co-founder Nisha, and their intern Devika are such that half of the total of their ages after 6 years will be ___ years. Eight years from now, Devika's age will be half of Nisha's current age. After 18 years, Ankit's age will match what Nisha's age will be in 10 years. Devika's age after 10 years will be 18 years. What is Ankit's current age?

एक स्टार्टअप टीम में, संस्थापक अंकित, उनकी सह-संस्थापक निशा और उनकी प्रशिक्षु देविका की आयु इस प्रकार है कि 6 वर्ष बाद उनकी कुल आयु का आधा ___ वर्ष होगा। अब से आठ वर्ष बाद, देविका की आयु निशा की वर्तमान आयु की आधी होगी। 18 वर्ष बाद, अंकित की आयु 10 वर्ष बाद निशा की आयु से मेल खाएगी। 10 वर्ष बाद देविका की आयु 18 वर्ष होगी। अंकित की वर्तमान आयु क्या है?

- a) 31, 23
- b) 47, 28
- c) 41, 24
- d) 37, 19
- e) None of these

- 87) Three engineers—Rohan, Kabir, and Arjun—have a combined current age of 110 years. It is known that when Kabir's age was half of his present age, he suffered a knee injury during a construction project. At that point in time, Kabir's age was equal to the combined age of Rohan and Arjun.

Which of the following facts can be determined using the information provided?

- i. Kabir's current age.
- ii. The combined ages of Rohan and Arjun 14 years from now.
- iii. The year in which Kabir injured his knee.

तीन इंजीनियरों-रोहन, कबीर और अर्जुन की संयुक्त वर्तमान आयु 110 वर्ष है। यह ज्ञात है कि जब कबीर की आयु उसकी वर्तमान आयु की आधी थी, तो उसे एक निर्माण परियोजना के दौरान घुटने में चोट लग गई थी। उस समय, कबीर की आयु रोहन और अर्जुन की संयुक्त आयु के बराबर थी। दी गई जानकारी का उपयोग करके निम्नलिखित में से कौन सा तथ्य निर्धारित किया जा सकता है?

- i. कबीर की वर्तमान आयु।
- ii. अब से 14 वर्ष बाद रोहन और अर्जुन की संयुक्त आयु।
- iii. वह वर्ष जिसमें कबीर को घुटने में चोट लगी थी।

- a) Only I
- b) Both I and II

- c) Both I and III
- d) Both II and III
- e) All I, II and III

88) Kabir (Shivam) fractured his hand when he was 22, which is 22 years ago (since his current age is 44). So the event occurred 22 years ago, hence we can't determine exact year without knowing the current year.

The current ages of Ananya, Neha, and Ritika are given as $(y + 10)$ years, $(y + 2)$ years, and $2y$ years, respectively.

Statement I: The present average age of Ananya and Neha together is 10 years less than the average age of Neha and Ritika together.

Statement II: The present average age of Ananya and Ritika together is 4 years more than the average age of Neha and Ritika together.

Which of the following statements is correct?

कबीर (शिवम) का हाथ तब फ्रैक्चर हुआ जब वह 22 वर्ष का था, जो कि 22 वर्ष पहले की बात है (क्योंकि उसकी वर्तमान आयु 44 वर्ष है)। इसलिए यह घटना 22 वर्ष पहले हुई थी, इसलिए हम वर्तमान वर्ष जाने बिना सटीक वर्ष निर्धारित नहीं कर सकते।

अनन्या, नेहा और रितिका की वर्तमान आयु क्रमशः $(y + 10)$ वर्ष, $(y + 2)$ वर्ष और $2y$ वर्ष दी गई है।

कथन I: अनन्या और नेहा की वर्तमान औसत आयु नेहा और रितिका की औसत आयु से 10 वर्ष कम है।

कथन II: अनन्या और रितिका की वर्तमान औसत आयु नेहा और रितिका की औसत आयु से 4 वर्ष अधिक है।

निम्नलिखित में से कौन सा कथन सही है?

- a) Statement I alone is sufficient
- b) Statement II alone is sufficient
- c) Both I and II together are sufficient
- d) Either I or II alone is sufficient
- e) Both I and II together are not sufficient

89) At TechCore Solutions, the current age ratio between two senior developers, Raghav and Bhavin, is 3:2. The age gap between Bhavin and another colleague, Neel, is 12 years. What is the difference between the ages of Raghav and Neel?

Statement I: The largest age gap among any two of the three developers is 36 years.

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

Statement II: The difference in ages between Bhavin and Raghav equals 66.67% of Neel's current age.

Statement III: Neel's present age is exactly half of Raghav's present age.

What can be concluded?

टेककोर सॉल्यूशंस में, दो वरिष्ठ डेवलपर्स, राघव और भाविन के बीच वर्तमान आयु अनुपात 3:2 है। भाविन और एक अन्य सहकर्मी, नील के बीच आयु का अंतर 12 वर्ष है। राघव और नील की आयु में क्या अंतर है?

कथन I: तीन डेवलपर्स में से किसी भी दो के बीच सबसे बड़ा आयु अंतर 36 वर्ष है।

कथन II: भाविन और राघव के बीच आयु का अंतर नील की वर्तमान आयु के 66.67% के बराबर है।

कथन III: नील की वर्तमान आयु राघव की वर्तमान आयु की ठीक आधी है।

क्या निष्कर्ष निकाला जा सकता है?

- a) Either I or II alone is sufficient
- b) Either II or III alone is sufficient
- c) Any two statements together are sufficient
- d) Both I and II together are sufficient
- e) All three statements together are sufficient

90) In a company, there are 10 employees named P to Y. The ratio of the ages of X, P, Q, and R is 5:3:3:3. The age of employee S is 30 years, which is $\frac{1}{12}$ th of the sum of all the 10 employees' ages. The average age of the remaining 5 employees is 7.6 years higher than the average age of all employees in the company.

I. The difference between the average age of P, Q, R, and X and the age of employee S.

II. The difference between the sum of ages of R and X together and the sum of ages of P and Q together.

III. If the average age of X, S, and T is 32 years, find the ratio of ages of X to T.

एक कंपनी में P से Y नाम के 10 कर्मचारी हैं। X, P, Q और R की आयु का अनुपात 5:3:3:3 है। कर्मचारी S की आयु 30 वर्ष है, जो सभी 10 कर्मचारियों की आयु के योग का $\frac{1}{12}$ वां भाग है। शेष 5 कर्मचारियों की औसत आयु कंपनी के सभी कर्मचारियों की औसत आयु से 7.6 वर्ष अधिक है।

I. P, Q, R और X की औसत आयु और कर्मचारी S की आयु के बीच का अंतर।

II. R और X की आयु के योग और P और Q की आयु के योग के बीच का अंतर।

- c) Quantity I < Quantity II > Quantity III
- d) Quantity I < Quantity II < Quantity III
- e) None of these

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

Solution

1) Solution:

Let the age of Sam in 2020 be x . Therefore, the age of Raj in 2017 will be $x + 5$.

The age of Raj in 2022 is $x + 5 + 5 = x + 10$.

We are told that the age of Raj in 2022 is double the age of Sam in 2010.

The age of Sam in 2010 is $x - 10$, and the age of Raj in 2022 is $x + 10$.

So, $x + 10 = 2(x - 10)$.

Solving the equation:

$$x + 10 = 2(x - 10)$$

$$x + 10 = 2x - 20$$

$$x = 30$$

So, Sam's age in 2020 is 30, and Raj's age in 2017 is $30 + 5 = 35$.

Raj's age in 2022 is $35 + 5 = 40$, and Sam's age in 2022 is $30 + 2 = 32$.

The sum of their ages in 2022 is:

$$40 + 32 = 72$$

2) Solution:

Let their ages in 2016 be:

$$\text{Aarav} = 7x$$

$$\text{Kunal} = 5x$$

In 2020, 4 years later:

$$\text{Aarav} = 7x + 4$$

$$\text{Kunal} = 5x + 4$$

Given that their ratio in 2020 = 4 : 3

$$\Rightarrow (7x + 4) / (5x + 4) = 4 / 3$$

Cross-multiplying:

$$3(7x + 4) = 4(5x + 4)$$

$$\Rightarrow 21x + 12 = 20x + 16$$

$$\Rightarrow x = 4$$

So in 2016:

$$\text{Aarav} = 7x = 28$$

$$\text{Kunal} = 5x = 20$$

In 2010 (6 years earlier):

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$\text{Aarav} = 28 - 6 = 22$$

$$\text{Kunal} = 20 - 6 = 14$$

$$\text{So ratio} = 22 : 14 = 11 : 7$$

3) Solution:

$$\text{Let } A : B = 4 : 5 \Rightarrow A = 4x, B = 5x$$

$$\text{Also, } B : C = 2 : 3 \Rightarrow B = 2y, C = 3y$$

Now equate B from both:

$$5x = 2y \Rightarrow y = (5x)/2 \Rightarrow C = 3y = 3 \times (5x/2) = (15x/2)$$

After 4 years:

$$A + 4 = 4x + 4$$

$$C + 4 = (15x/2) + 4$$

$$\text{Given: } (A + 4) / (C + 4) = 10 / 17$$

$$\Rightarrow (4x + 4) / ((15x/2) + 4) = 10 / 17$$

Cross-multiply:

$$17(4x + 4) = 10((15x/2) + 4)$$

$$\Rightarrow 68x + 68 = 10 \times (15x/2 + 4)$$

$$\Rightarrow 68x + 68 = (150x/2) + 40 = 75x + 40$$

Now solve:

$$68x + 68 = 75x + 40$$

$$\Rightarrow 68 = 7x + 40$$

$$\Rightarrow 28 = 7x \Rightarrow x = 4$$

$$\text{Then, } B = 5x = 20$$

Answer: (C) 20

4) Solution:

Let Arjun's present age be x and Ravi's present age be y .

From the equation $(x + y = 65)$ and the ratio $(7(x - 5) = 4(y - 5))$, we get $x = 25$ and $y = 40$.

The percentage of Arjun's age as a percentage of Ravi's age is $(25 / 40) \times 100 = 62.5\%$.

5) Solution:

Let Aman's age be x , Aryan's age be y , and Rahul's age be z .

From the given equations:

$$8x = 7y - 35,$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$5x = 7z,$$

$$z = y - 20.$$

Solving these, we find Rahul's present age is 25 years.

6) Solution:

Current Age of Rajeev and his father is ' $2x$ ' and ' $7x$ ' years

Since Rajeev's father was 35 years old when Rajeev was born,

$$7x - 2x = 35$$

$$5x = 35$$

$$x = 7$$

Therefore,

$$\text{Rajeev's current age} = 2x = 2 * 7 = 14 \text{ years}$$

$$\text{Rajeev's father's current age} = 7x = 7 * 7 = 49 \text{ years}$$

$$\text{Age of Rajeev's sister} = 14 - 5 = 9 \text{ years}$$

$$\text{Age of Rajeev's sister after 1 year} = 9 + 1 = 10 \text{ years}$$

$$\text{Age of Rajeev's father after 1 year} = 49 + 1 = 50 \text{ years}$$

$$\text{Ratio} = 10: 50 = 1: 5$$

7) Solution:

Let Raghav's current age = $11x$ and Arjun's current age = $9x$.

After 5 years, their ages will be:

$$\text{Raghav} = 11x + 5$$

$$\text{Arjun} = 9x + 5$$

The average of their ages after 5 years is given as 35 years:

$$(11x + 5 + 9x + 5) / 2 = 35$$

Simplifying the equation:

$$(20x + 10) / 2 = 35$$

$$20x + 10 = 70$$

$$20x = 60$$

$$x = 3$$

$$\text{Now, the present age of Arjun} = 9x = 9 * 3 = 27 \text{ years.}$$

After 10 years, Arjun's age will be:

$$27 + 10 = 37 \text{ years}$$

8) Solution:

Let Priya's age be x . Then Rahul's age is $5x$.

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

From the equation $(5x + 3) / (x + 3) = 4$, we get $x = 9$.

So, Priya is 9 years old and Rahul is 45 years old.

Eleven years later, their ages will be 56 and 20, respectively. The ratio is $56:20 = 14:5$.

9) Solution:

Let the present age of the assistant be x . Therefore, the present age of the manager will be $5x / 2$.

The junior employee is 3 years younger than the assistant, so the age of the junior employee is $x - 3$.

The senior employee is 3 years younger than the manager, so the age of the senior employee is $(5x / 2) - 3$.

We are given the ratio of the ages of the senior employee and the junior employee is 3:1:

$$(5x / 2) - 3 / x - 3 = 3$$

Solving the equation:

$$(5x / 2) - 3 = 3(x - 3)$$

$$5x - 6 = 6x - 18$$

$$x = 12$$

So, the present age of the assistant is 12, and the present age of the manager is $5 \times 12 / 2 = 30$.

Thus, the present age of the manager is 30 years.

10) Solution:

Let us assume, the present age of A = $3x$ years

The present age of B = x years

The present age of C = $(2x + 8)$ years

After 5 years the age of A = $(3x + 5)$ years

Before 3 years, the age of C = $(2x + 5)$ years

According to the question,

$$(3x + 5) : (2x + 5) = 7 : 5$$

$$(3x + 5) / (2x + 5) = 7 / 5$$

$$15x + 25 = 14x + 35$$

$$15x - 14x = 35 - 25$$

$$\text{So, } x = 10$$

After 7 years, the age of A = $(3x + 7)$ years

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$= [(3 * 10) + 7] \text{ years}$$
$$= 37 \text{ years}$$

11) Solution:

Given, the average of the present age of A, B and C is 22 years

$$\text{So, } (A + B + C) = 22 * 3 = 66 \dots (1)$$

The present age of B is 12 years more than the age of A

$$\text{So, } B = A + 12$$

And, the ratio of age of A before 1 year and the present age of C = 4: 5

Let us assume, 1 year ago, the age of A = $4x$ years

$$\text{So, the present age of A} = (4x + 1) \text{ years}$$

$$\text{The present age of C} = 5x \text{ years}$$

$$\text{The present age of B} = (4x + 1 + 12) \text{ years} = (4x + 13) \text{ years}$$

According to the question, putting all the values of A, B and C in equation (1),

we get,

$$(4x + 1) + 5x + (4x + 13) = 66$$

$$13x = 52$$

$$\text{So, } x = 4$$

$$\text{The present age of A} = [(4 * 4) + 1] \text{ years} = 17 \text{ years}$$

$$\text{The present age of B} = [(4 * 4) + 13] \text{ years} = 29 \text{ years}$$

$$\text{The present age of C} = (5 * 4) \text{ years} = 20 \text{ years}$$

12) Solution:

The ratio of the present age of A and B = 11: 19

Let us assume, the present age of A = $11x$ years

$$\text{The present age of B} = 19x \text{ years}$$

$$\text{The age of C, 6 years later} = [(11x + 19x) / 2] \text{ years} = 15x \text{ years}$$

$$\text{The present age of C} = (15x - 6) \text{ years}$$

According to the question,

$$(15x - 6) = (11x + 6)$$

$$15x - 11x = 6 + 6$$

$$4x = 12$$

$$\text{So, } x = 3$$

$$\text{The present age of A} = (11 * 3) \text{ years} = 33 \text{ years}$$

$$\text{The present age of B} = (19 * 3) \text{ years} = 57 \text{ years}$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

The present age of A = $[(15 * 3) - 6]$ years = 39 years

The average value of the present age of A, B and C = $[(33 + 57 + 39) / 3]$ years
= 43 years

13) Solution:

The ratio of age of A and B, 2 years later = 5: 9

Let us assume, the age of A, 2 years later = $5x$ years

The present age of A = $(5x - 2)$ years

The age of B, 2 years later = $9x$ years

The present age of B = $(9x - 2)$ years

The present age of C = $(5x + 6)$ years

According to the question,

$$(9x - 2 - 3): (5x + 6 + 9) = 1: 1$$

$$\Rightarrow (9x - 5): (5x + 15) = 1: 1$$

$$\Rightarrow 9x - 5 = 5x + 15$$

$$\Rightarrow 9x - 5x = 15 + 5$$

$$\Rightarrow 4x = 20$$

$$\text{So, } x = 5$$

The present age of A = $[(5 * 5) - 2]$ years = 23 years

14) Solution:

The ratio of age of A and B, 3 years ago = 4: 5

Let us assume, the age of A, 3 years ago = $4x$ years

The present age of A = $(4x + 3)$ years

The age of B, 3 years ago = $5x$ years

The present age of B = $(5x + 3)$ years

The present age of C = $(4x + 3 + 2)$ years = $(4x + 5)$ years

According to the question,

$$4x + 5 = 5x + 3 - 4$$

$$5x - 4x = 5 + 4 - 3$$

$$\text{So, } x = 6$$

The present age of A = $[(4 * 6) + 3]$ years = 27 years

The present age of B = $[(5 * 6) + 3]$ years = 33 years

The present age of C = $[(4 * 6) + 5]$ years = 29 years

The ratio of A after 3 years and the present age C after 6 years

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$= (27 + 3) : (29 + 6)$$

$$= 30 : 35$$

$$= 6 : 7$$

15) Solution:

The ratio of the age of A 6 years ago and the age of B 2 years later = 1:3

Let us assume, the age of A of 6 years ago = x years

The age of B of 2 years later = $3x$ years

The present age of A = $(x + 6)$ years

The present age of B = $(3x - 2)$ years

The present age of C = $[(x + 6) + (3x - 2)] / 2$ years

$$= [(4x + 4) / 2] \text{ years}$$

$$= (2x + 2) \text{ years}$$

After 3 years the age of C = $(2x + 2 + 3)$ years = $(2x + 5)$ years

After 4 years, the age of B = $(3x - 2 + 4)$ years = $(3x + 2)$ years

According to the question,

$$(3x + 2) : (2x + 5) = 4 : 3$$

$$(3x + 2) / (2x + 5) = 4/3$$

$$9x + 6 = 8x + 20$$

$$9x - 8x = 20 - 6$$

$$\text{So, } x = 14$$

After 10 years, the age of A = $(14 + 6 + 4)$ years = 24 years

6 years ago, the age of B = $[(3 \times 14) - 2 - 6]$ years = 34 years

The required ratio = 24: 34

$$= 12 : 17$$

16) Solution:

Given, the average present age of A, B and C is 28 years

$$\text{So, } (A + B + C) = 28 \times 3 = 84 \dots (1)$$

The present age of B is 10 less than the age of A

$$\text{So, } B = A - 10$$

And, the ratio of age of A 5 years ago and age of C 4 years later = 4: 3

Let us assume, the age of A 5 years ago = $4x$ years

So, the present age of A = $(4x + 5)$ years

The age of C 4 years later = $3x$ years

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

The present age of C = $(3x - 4)$ years

The present age of B = $(4x + 5 - 10)$ years = $(4x - 5)$ years

According to the question, putting all the values of A, B and C in equation (1), we get,

$$(4x + 5) + (4x - 5) + (3x - 4) = 84$$

$$11x = 88$$

$$\text{So, } x = 8$$

The present age of A = $[(4 * 8) + 5]$ years = 37 years

The present age of B = $[(4 * 8) - 5]$ years = 27 years

The present age of C = $[(3 * 8) - 4]$ years = 20 years

The ratio of the age of A 1 year ago and the age of B 3 years later = $(37 - 1) : (27 + 3)$

$$= 36 : 30$$

$$= 6 : 5$$

17) Solution:

The ratio of the present age of A and B = 2 : 3

Let us assume, the present age of A = $2x$ years

The present age of B = $3x$ years

The age of A, 2 years ago = $(2x - 2)$ years

The age of B, 2 years later = $(3x + 2)$ years

According to the question,

$$(2x - 2) / (3x + 2) = 3 / 5$$

$$10x - 10 = 9x + 6$$

$$10x - 9x = 10 + 6$$

$$\text{So, } x = 16$$

The present age of A = $(16 * 2)$ years = 32 years

The present age of B = $(16 * 3)$ years = 48 years

The present age of C = $(48 + 2) / 5 * 4 = 40$ years

The sum of the present age of A, B and C = $(32 + 48 + 40)$ years
= 120 years

18) Solution:

The ratio of age of A and B, 3 years ago = 5 : 4

Let us assume, the age of A, 3 years ago = $5x$ years

The present age of A = $(5x + 3)$ years

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

The age of B, 3 years ago = $4x$ years

The present age of B = $(4x + 3)$ years

The present age of C = $(4x + 3 - 8)$ years = $(4x - 5)$ years

According to the question,

$$(4x - 5 + 2) : (4x + 3 - 1) = 5 : 6$$

$$(4x - 3) / (4x + 2) = 5 / 6$$

$$24x - 18 = 20x + 10$$

$$24x - 20x = 18 + 10$$

$$4x = 28$$

$$\text{So, } x = 7$$

The present age of A = $[(5 * 7) + 3]$ years = 38 years

The present age of B = $[(4 * 7) + 3]$ years = 31 years

The present age of C = $[(4 * 7) - 5]$ years = 23 years

The average of age of A and B after 3 years = $[(38 + 31 + 6) / 2]$ years
= 37.5 years

19) Solution:

Let their ages 6 years ago be $3x$ and $5x$.

Current ages = $3x + 6$ and $5x + 6$

After 6 years: $(3x + 12) / (5x + 12) = 5 / 7$

Cross-multiplying: $7(3x + 12) = 5(5x + 12)$

$$21x + 84 = 25x + 60 \rightarrow 4x = 24 \rightarrow x = 6$$

Current ages: $3x + 6 = 24$, $5x + 6 = 36$

$$\text{Sum} = 24 + 36 = 60$$

Answer: D) 60

20) Solution:

Let Arjun's age = $5k$, Simran's age = $4k$, and Ravi's age = $3k$ (based on the given ratios).

The average age of Arjun, Simran, and Ravi is 36 years:

$$(5k + 4k + 3k) / 3 = 36$$

$$\Rightarrow 12k / 3 = 36$$

$$\Rightarrow 4k = 36$$

$$\Rightarrow k = 9$$

Now, Ravi's age = $3k = 3 \times 9 = 27$.

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

21) Solution:

Let Bob's age = x ,

Then Alice's age = $x + 8$,

And Charlie's age = $x + 10$.

Sum of their ages:

$$(x + 8) + x + (x + 10) = 90$$

$$\Rightarrow 3x + 18 = 90$$

$$\Rightarrow 3x = 72$$

$$\Rightarrow x = 24$$

$$\text{Bob's age after 10 years} = 24 + 10 = 34$$

22) Solution:

Let Ramesh's age = $5k$ and Suresh's age = $3k$.

Ten years ago, Ramesh's age was equal to Suresh's present age:

$$5k - 10 = 3k$$

$$\Rightarrow 2k = 10$$

$$\Rightarrow k = 5$$

So, Ramesh's age = $5k = 25$ and Suresh's age = $3k = 15$.

The sum of their ages = $25 + 15 = 40$.

23) Solution:

Let Ravi's age = $3k$ and Mohan's age = $4k$.

After 10 years, the ratio of their ages will be 5:6:

$$(3k + 10) / (4k + 10) = 5 / 6$$

Cross-multiply:

$$6(3k + 10) = 5(4k + 10)$$

$$18k + 60 = 20k + 50$$

$$\Rightarrow 60 - 50 = 20k - 18k$$

$$\Rightarrow 10 = 2k$$

$$\Rightarrow k = 5$$

So, Ravi's age = $3k = 15$ and Mohan's age = $4k = 20$.

The difference in their ages = $20 - 15 = 5$ years.

24) Solution:

Let the current ages of A and B be $4k$ and $3k$, respectively, where k is a constant.

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

After 8 years, the ages of A and B will be $(4k + 8)$ and $(3k + 8)$. The ratio of their ages at that time is 5:4, so:

$$(4k + 8) / (3k + 8) = 5 / 4$$

Cross-multiply:

$$4 * (4k + 8) = 5 * (3k + 8)$$

$$16k + 32 = 15k + 40$$

$$16k - 15k = 40 - 32$$

$$k = 8$$

Now, the current ages of A and B are:

$$\text{A's age} = 4k = 4 * 8 = 32$$

$$\text{B's age} = 3k = 3 * 8 = 24$$

To find the ratio of their ages 12 years ago, we subtract 12 from each of their current ages:

$$\text{A's age 12 years ago} = 32 - 12 = 20$$

$$\text{B's age 12 years ago} = 24 - 12 = 12$$

The ratio of their ages 12 years ago is:

$$20 / 12 = 5 / 3$$

25) Solution:

Let Sameer's age be x years.

Then Rohit's age = $x + 11$

Karan's age = $2x$

$$\text{Average of all three} = (x + x + 11 + 2x) / 3 = 33$$

$$\text{Total sum} = 4x + 11 = 99$$

$$\text{So, } 4x = 88 \rightarrow x = 22$$

$$\text{Rohit's age} = 22 + 11 = 33$$

26) Solution:

Let the age of Vishy, 46 years ago be ' x '

Then current age of Vishy = $x + 46$

current age of Tal = $3x + 46$

Age of Kas 63 years ago = $(3x - 17) / 2$

So, current age of Kas = $(3x + 109) / 2$

Combined age of Kas and Tal 2 years in the future = $(3x + 48) +$

$$(3x + 113) / 2 = 145$$

$$\text{i.e., } 9x + 209 = 290$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$9x = 81$$

$$\text{Hence } x = 9$$

So, current age of Vishy is $9 + 46 = 55$

And so, if Vishy was born in 1950, it would be the year 2005 now.

27) Solution:

Let the age of the person be X years.

His reply was, 'Take my age three years hence, multiply it by 3 and then subtract three times my age three years ago and you will know how old I am.

$$= (X + 3) * 3 - 3 * (X - 3) = 3 * (3 + 3) = 18 \text{ years.}$$

28) Solution:

Let Rahul's age be $4x$ and Priya's age be x (since the ratio is 4:1).

From the given product of their ages:

$$4x \times x = 1024$$

$$\Rightarrow 4x^2 = 1024$$

$$\Rightarrow x^2 = 256$$

$$\Rightarrow x = 16$$

So,

$$\text{Rahul's current age} = 4x = 4 \times 16 = 64 \text{ years}$$

After 18 years, Rahul's age will be:

$$64 + 18 = 82 \text{ years}$$

29) Solution:

Let Arjun's age be $2x$ and his father's age be $7x$.

Using the ratio after 12 years:

$$(2x + 12) / (7x + 12) = 4 / 9$$

Solving for x :

$$x = 6$$

Now, their current ages are:

$$\text{Arjun's age} = 12 \text{ years}$$

$$\text{Father's age} = 42 \text{ years}$$

6 years ago:

$$\text{Arjun's age} = 6 \text{ years}$$

$$\text{Father's age} = 36 \text{ years}$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

The average of their ages 6 years ago:

$$(6 + 36) / 2 = 21 \text{ years}$$

30) Solution:

Let the current age of A be "a" and the current age of B be "b".

From the first statement: $a - 10 = b + 8$

$$a - b = 18 \text{ (Equation 1)}$$

From the second statement: $(a + 14) / (b + 14) = 7 / 5$

$$5(a + 14) = 7(b + 14)$$

$$5a + 70 = 7b + 98$$

$$5a - 7b = 28 \text{ (Equation 2)}$$

Substitute $a = b + 18$ into Equation 2: $5(b + 18) - 7b = 28$

$$5b + 90 - 7b = 28$$

$$-2b + 90 = 28$$

$$-2b = -62$$

$$b = 31$$

So, B's age after 8 years = $31 + 8 = 39$.

31) Solution:

Let the ages of A, B, and C be $5k$, $6k$, and $3m$ respectively, where k and m are constants.

From the second ratio, the ratio of B's age to C's age is 2:3, so: $(6k) / (3m) = 2 / 3$

$$\text{Cross-multiply: } 6k * 3 = 2 * 3m$$

$$18k = 6m$$

$$m = 3k$$

Now, the difference between the ages of A and C is given as 18 years:

$$3m - 5k = 18$$

$$\text{Substitute } m = 3k: 3(3k) - 5k = 18$$

$$9k - 5k = 18$$

$$4k = 18$$

$$k = 4.5$$

Now, calculate the ages: A's age = $5k = 5 * 4.5 = 22.5$

B's age = $6k = 6 * 4.5 = 27$

C's age = $3m = 3 * (3k) = 3 * (3 * 4.5) = 40.5$

The sum of their ages: $A + B + C = 22.5 + 27 + 40.5 = 90$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

32) Solution:

Let Arun's present age = x and Suman's present age = y .

After 6 years, the ratio of their ages will be 5:7:

$$(x + 6) / (y + 6) = 5 / 7$$

Cross-multiply:

$$7(x + 6) = 5(y + 6)$$

$$7x + 42 = 5y + 30$$

$$\Rightarrow 7x - 5y = -12 \text{ ---(1)}$$

In 8 years, Arun's age will be equal to Suman's present age:

$$x + 8 = y$$

$$\Rightarrow x = y - 8 \text{ ---(2)}$$

Substitute (2) into (1):

$$7(y - 8) - 5y = -12$$

$$\Rightarrow 7y - 56 - 5y = -12$$

$$\Rightarrow 2y = 44$$

$$\Rightarrow y = 22$$

Now, substitute $y = 22$ into $x = y - 8$:

$$x = 22 - 8 = 14$$

The ratio of their present ages = $y / x = 22 / 14 = 11 / 7$

33) Solution:

Let Chirag's age = x .

Then, Bhavin's age = 125% of $x = 1.25x$.

Arjun's age = 120% of Bhavin's age = $1.2 \times 1.25x = 1.5x$.

The average of their ages is 25:

$$(\text{Arjun's age} + \text{Bhavin's age} + \text{Chirag's age}) / 3 = 25$$

$$\Rightarrow (1.5x + 1.25x + x) / 3 = 25$$

$$\Rightarrow 3.75x / 3 = 25$$

$$\Rightarrow 3.75x = 75$$

$$\Rightarrow x = 75 / 3.75$$

$$\Rightarrow x = 20$$

50% of Chirag's age = 50% of 20 = 10.

34) Solution:

Let Simran's age = $3k$ and Deepak's age = $4k$.

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

The average age of Raj, Simran, and Deepak is 30:

$$(\text{Raj's age} + \text{Simran's age} + \text{Deepak's age}) / 3 = 30$$

$$\Rightarrow (\text{Raj's age} + 3k + 4k) / 3 = 30$$

$$\Rightarrow \text{Raj's age} + 7k = 90$$

$$\Rightarrow \text{Raj's age} = 90 - 7k \text{ ---(1)}$$

After 8 years, the ratio of Simran's and Deepak's ages will be 4:5:

$$(\text{Simran's age} + 8) / (\text{Deepak's age} + 8) = 4 / 5$$

$$\Rightarrow (3k + 8) / (4k + 8) = 4 / 5$$

Cross-multiply:

$$5(3k + 8) = 4(4k + 8)$$

$$\Rightarrow 15k + 40 = 16k + 32$$

$$\Rightarrow 40 - 32 = 16k - 15k$$

$$\Rightarrow 8 = k$$

Now, substitute $k = 8$ into equation (1):

$$\text{Raj's age} = 90 - 7(8) = 90 - 56 = 34.$$

35) Solution:

$$\text{The present age of A} = 3x$$

$$\text{The present age of B} = x$$

$$(x + 10) / (3x - 10) = 9 / 7$$

$$7x + 70 = 27x - 90$$

$$20x = 160$$

$$x = 8$$

$$\text{The present age of A} = 3x = 24 \text{ years}$$

$$\text{The present age of B} = x = 8 \text{ years}$$

$$\text{The present age of C} = 42 - 24 = 18 \text{ years}$$

$$\text{Required sum} = 8 + 4 + 18 + 4 = 34 \text{ years}$$

36) Solution:

The average present age of A, B, and C is 19 years.

$$\text{So, the total sum of the present age of A, B, and C} = 19 * 3 = 57 \text{ years}$$

According to the question,

Let us assume,

$$\text{The age of A before 2 years} = 3x \text{ years}$$

$$\text{The present age of A} = (3x + 2) \text{ years}$$

$$\text{The age of B before 2 years was} = 4x \text{ years}$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

The present age of B = $(4x + 2)$ years

The age of C before one year was = $6x$ years

The present age of C = $(6x + 1)$ years

So, according to the question,

$$(3x + 2) + (4x + 2) + (6x + 1) = 57$$

$$13x = 57 - 5$$

$$13x = 52$$

$$\text{So, } x = 4$$

The present age of A = $(3x + 2)$ years = 14 years

The present age of B = $(4x + 2)$ years = 18 years

The present age of C = $(6x + 1)$ years = 25 years

So, the average age of A after 3 years, B after 2 years, and C before 8 years

$$= [14 + 18 + 25 + 3 + 2 - 8] / 3$$

$$= 54 / 3$$

$$= 18 \text{ years}$$

37) Solution:

Let us assume,

The age of A, 1 year later = $5x$ years

So, the present age of A = $(5x - 1)$ years

The age of B, 3 years later = $4x$ years

So, the present age of B = $(4x - 3)$ years

The age of C, 3 years later = $7x$ years

So, the present age of C = $(7x - 3)$ years

So, according to the question,

$$(7x - 3) + 8 = (5x - 1) + (4x - 3) - 1$$

$$2x = 10$$

$$\text{So, } x = 5$$

The present age of A = $(5x - 1)$ years = 24 years

The present age of B = $(4x - 3)$ years = 17 years

The present age of C = $(7x - 3)$ years = 32 years

So, the average age of A after 4 years and B after 10 years

$$= [24 + 17 + 5 + 10] / 2$$

$$= 56 / 2$$

$$= 28 \text{ years}$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

38) Solution:

Let us assume,

The age of A, 2 years ago = $9x$ years

So, the present age of A = $(9x + 2)$ years

The present age of B = $12x$ years

The age of C, 3 years later = $16x$ years

So, the present age of C = $(16x - 3)$ years

So, according to the question,

$$(16x - 3) = (9x + 2) + 12x - 15$$

$$5x = 10$$

$$x = 2$$

The present age of C = $(16x - 3)$ years = 29 years

The present age of A = $(9x + 2)$ years = 20 years

The present age of B = $12x$ years = 24 years

So, the ratio of age of A after 2 years and C after 1 year

$$= (20 + 2) : (29 + 1)$$

$$= 22 : 30$$

$$= 11 : 15$$

39) Solution:

Let us assume,

The present age of Dev = $5x$ years

The age of Deep after 4 years = $7x$ years

So, the present age of Deep = $(7x - 4)$ years

The age of Deepak before 2 years = $8x$ years

So, the present age of Deepak = $(8x + 2)$ years

The age of Deepta, 5 years ago = $9x$ years

So, the present age of Deepta = $(9x + 5)$ years

According to the question,

$$5x + (7x - 4) = (8x + 2) + 10$$

$$4x = 16$$

$$\text{So, } x = 4$$

The present age of Deep = $(7x - 4)$ years = 24 years

The present age of Deepta = $(9x + 5)$ years = 41 years

Required sum = $24 + 41 = 65$ years

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

40) Solution:

The present age of B = $3x$ years

The present age of A = x years

The age of C before 5 years = $(3x - 2) * \frac{4}{5}$ years

The present age of C = $(3x - 2) * \frac{4}{5} + 5$ years

$$(x + 1) / ((3x - 2) * \frac{4}{5} + 5 - 5) = \frac{1}{2}$$

$$5(x + 1) / ((3x - 2) * 4) = \frac{1}{2}$$

$$5(x + 1) / ((3x - 2) * 2) = \frac{1}{1}$$

$$5x + 5 = 6x - 4$$

$$x = 9$$

The present age of A = $x = 9$ years

The age of A before 6 years = $9 - 6 = 3$ years

41) Solution:

$$B + C = 23 * 2 = 46$$

$$A + B + C = 22 * 3 = 66$$

$$A + B + C - B - C = 66 - 46$$

$$A = 20$$

$$B \text{ after 7 years} = (20 - 2) * \frac{4}{3} = 24$$

$$B \text{ (Present)} = 24 - 7 = 17$$

$$C = 46 - 17 = 29 \text{ years}$$

42) Solution:

Present age of A = $3x$

Present age of B = $4x - 5$

$$(C - 2) * \frac{5}{7} = (4x - 5 + 2)$$

$$C - 2 = (4x - 3) * \frac{7}{5}$$

$$C = 7(4x - 3)/5 + 2$$

$$4x - 5 + 7(4x - 3)/5 + 2 = 60$$

$$20x - 25 + 28x - 21 + 10 = 300$$

$$48x - 36 = 300$$

$$48x = 336$$

$$x = 7$$

$$A = 3x = 21$$

$$B = 4x - 5 = 23$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$A + B = 21 + 23 = 44 \text{ years}$$

43) Solution:

$$\text{Present age of A} = 2x$$

$$\text{Present age of B} = 3x$$

$$\text{Present age of C} = 3x + 1$$

$$A - 2 + B + C + 3 = 58$$

$$A + B + C = 57$$

$$8x + 1 = 57$$

$$8x = 56$$

$$x = 7$$

$$\text{Present age of A} = 14$$

$$\text{Present age of C} = 21 + 1 = 22$$

$$\begin{aligned} \text{Required percentage} &= 14/22 * 100 \\ &= 63.63\% \end{aligned}$$

44) Solution:

$$A = 3x + 6$$

$$B = 4x + 6$$

$$(3x + 6 + 8) / (4x + 6 + 8) = 13/15$$

$$(3x + 14) / (4x + 14) = 13/15$$

$$45x + 210 = 52x + 182$$

$$7x = 28$$

$$x = 4$$

$$A = 3x + 6 = 18$$

$$B = 4x + 6 = 22$$

$$\begin{aligned} C &= (18 + 2 + 22 + 2)/2 \\ &= 44/2 \\ &= 22 \text{ years} \end{aligned}$$

45) Solution:

Let Ravi's present age = x and Simran's present age = y .

The ratio of Ravi's age 6 years ago to Simran's age 4 years hence is 2:5:

$$(x - 6) / (y + 4) = 2 / 5$$

Cross-multiply:

$$5(x - 6) = 2(y + 4)$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$\Rightarrow 5x - 30 = 2y + 8$$

$$\Rightarrow 5x - 2y = 38 \text{ ---(1)}$$

The average present age of Ravi and Simran is 36:

$$(x + y) / 2 = 36$$

$$\Rightarrow x + y = 72 \text{ ---(2)}$$

Solve equations (1) and (2):

From equation (2):

$$x = 72 - y$$

Substitute $x = 72 - y$ into equation (1):

$$5(72 - y) - 2y = 38$$

$$\Rightarrow 360 - 5y - 2y = 38$$

$$\Rightarrow 360 - 7y = 38$$

$$\Rightarrow 7y = 322$$

$$\Rightarrow y = 46$$

Substitute $y = 46$ into $x = 72 - y$:

$$x = 72 - 46 = 26$$

Now, Ravi's age as a percentage of Simran's age is:

$$(26 / 46) \times 100 = 56.52\%$$

46) Solution:

Let Arjun's present age = x and Simran's present age = y .

Eight years ago, Arjun's age was three times Simran's age:

$$(x - 8) = 3(y - 8)$$

$$\Rightarrow x - 8 = 3y - 24$$

$$\Rightarrow x - 3y = -16 \text{ ---(1)}$$

In 5 years, Arjun's age will be twice Simran's age in 7 years:

$$(x + 5) = 2(y + 7)$$

$$\Rightarrow x + 5 = 2y + 14$$

$$\Rightarrow x - 2y = 9 \text{ ---(2)}$$

Solve equations (1) and (2):

From equation (2):

$$x = 2y + 9$$

Substitute $x = 2y + 9$ into equation (1):

$$(2y + 9) - 3y = -16$$

$$\Rightarrow 2y + 9 - 3y = -16$$

$$\Rightarrow -y + 9 = -16$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$\Rightarrow -y = -25$$

$$\Rightarrow y = 25$$

Substitute $y = 25$ into $x = 2y + 9$:

$$x = 2(25) + 9 = 50 + 9 = 59$$

The sum of their current ages = $x + y = 59 + 25 = 84$.

47) Solution:

Let Rahul's present age = $5k$ and Priya's present age = $9k$.

After 8 years, the ratio of their ages becomes 7:11:

$$(5k + 8) / (9k + 8) = 7 / 11$$

Cross-multiply:

$$11(5k + 8) = 7(9k + 8)$$

$$\Rightarrow 55k + 88 = 63k + 56$$

$$\Rightarrow 88 - 56 = 63k - 55k$$

$$\Rightarrow 32 = 8k$$

$$\Rightarrow k = 4$$

Now, Rahul's present age = $5k = 5 \times 4 = 20$

Priya's present age = $9k = 9 \times 4 = 36$

Neha's age = $36 / 2 = 18$

The sum of the ages of Rahul and Neha = $20 + 18 = 38$.

48) Solution:

Let Ramesh's age = $5k$, Suresh's age = $3k$.

After 4 years:

$$(5k + 4) / (3k + 4) = 11 / 7$$

$$7(5k + 4) = 11(3k + 4)$$

$$35k + 28 = 33k + 44$$

$$35k - 33k = 44 - 28$$

$$2k = 16$$

$$k = 8$$

Ramesh's age = $5 \times 8 = 40$, Suresh's age = $3 \times 8 = 24$.

Total age of Ramesh, Suresh, and Ravi = $24 \times 3 = 72$.

Ravi's age = $72 - (40 + 24) = 72 - 64 = 8$.

Ravi's age after 6 years = $8 + 6 = 14$.

49) Solution:

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

Let Bhavik's age = $x \rightarrow$ Ananya's age = $1.25x = 5x/4$

Let Charu's age = $c \rightarrow$ Danish's age = $c + 13$

From total: $5x/4 + x + c + (c + 13) = 128$

$(9x/4) + 2c + 13 = 128 \rightarrow (9x/4) + 2c = 115$

Also, $5x/4 : c = 5:7 \rightarrow (5x/4) = (5/7)c \rightarrow x = (4/7)c$

Substitute x in main equation:

$(9/4)*(4c/7) + 2c = 115 \rightarrow (9c/7) + 2c = 115$

$(9c + 14c)/7 = 115 \rightarrow 23c = 805 \rightarrow c = 35$

So Danish's age = $35 + 13 = 48$

50) Solution:

Let Viraj's current age be y years.

Then Rohan's current age is $y + 18$.

Five years ago, their ages were $(y + 13)$ and $(y - 5)$ respectively.

According to the ratio:

$(y + 13)/(y - 5) = 3/2$

Cross-multiplying gives:

$2(y + 13) = 3(y - 5)$

$2y + 26 = 3y - 15$

Solving this, we get $y = 41$

So Rohan's age = $41 + 18 = 59$

Sum of present ages = $41 + 59 = 100$

Zara's current age = 125% of $100 = 125$

Zara's age after 8 years = $125 + 8 = 133$

51) Solution:

$A + B + C + D = 160$

$B + C + D = 78$

Subtract $A + B = 132$ from $A + B + C + D = 160$ to get $C + D = 28$

After 10 years, $(B + 10)/(C + 10) = 5/2$, giving $2B - 5C = 30$

From $B + C + D = 78$, we get $B = 50$

Substitute $B = 50$ into $2B - 5C = 30$ to get $C = 14$

From $C + D = 28$, we get $D = 14$

52) Solution:

Let A's present age be W .

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

A's age after 8 years will be 16 years, so $W + 8 = 16$, which gives $W = 8$.
Babu (B) is 8 years older than A, so B's present age = $8 + 8 = 16$.
The difference between C's age and B's age is the same as A's present age, so $C's\ age - 16 = 8$, which gives C's present age = 24.
The ratio of B's age to C's age is $2:x$, so $16/24 = 2/x$.
Cross-multiply: $16x = 48$, which gives $x = 3$.

53) Solution:

Let the present age of P = $3x$, Q = $2x$, and R = $5y$.

The sum of their ages is 60 years:

$$3x + 2x + 5y = 60$$

$$5x + 5y = 60$$

$$x + y = 12 \text{ (Equation 1)}$$

From the ratio of P to R ($3x/5y = 3/5$), we can see that $x = y$.

Substitute $x = y$ into Equation 1:

$$x + x = 12$$

$$2x = 12$$

$$x = 6$$

So, P's age = $3x = 3(6) = 18$, Q's age = $2x = 2(6) = 12$, and R's age = $5y = 5(6) = 30$.

After 10 years, Q's age will be $12 + 10 = 22$.

54) Solution:

Let A's present age = x and B's present age = y .

$$(x - 5) / (y - 5) = 4 / 5 \rightarrow 5x - 4y = 5 \text{ (Equation 1)}$$

$$(x + 2) / (y + 2) = 5 / 6 \rightarrow 6x - 5y = -2 \text{ (Equation 2)}$$

Solve equations:

$$\text{From Equation 1: } 5x - 4y = 5$$

$$\text{From Equation 2: } 6x - 5y = -2$$

Solving these gives $x = 33$ and $y = 40$.

Sum of ages of A, B, and C = 126 $\rightarrow$ C's age = $126 - 33 - 40 = 53$.

C's age after 7 years = $53 + 7 = 60$.

55) Solution:

Let the present age of A = $3x$, B = $4x$, and C = $2y$.

The average age of A, B, C, and D = 19:

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$(3x + 4x + 2y + D) / 4 = 19,$$

$$7x + 2y + D = 76. \text{ (Equation 1)}$$

The age of B 8 years ago was 12:

$$4x - 8 = 12,$$

$$4x = 20,$$

$$x = 5.$$

Substitute $x = 5$ into Equation 1:

$$7(5) + 2y + D = 76,$$

$$35 + 2y + D = 76,$$

$$2y + D = 41. \text{ (Equation 2)}$$

The ratio of A to C is 1:2, so $3x / 2y = 1 / 2$,

$$6x = 2y,$$

$$2y = 30,$$

$$y = 15.$$

Substitute $y = 15$ into Equation 2:

$$2(15) + D = 41,$$

$$30 + D = 41,$$

$$D = 11.$$

56) Solution:

Let the present ages of A, B, C, and D be A, B, C, and D respectively.

A's age 6 years hence = $4/5$ * B's present age, so:

$$A + 6 = (4/5) * B \rightarrow A = (4/5) * B - 6. \text{ (Equation 1)}$$

B's present age = $1/4$ * C's age 12 years hence, so:

$$B = (1/4) * (C + 12) \rightarrow C = 4B - 12. \text{ (Equation 2)}$$

A's age after 4 years = $1/8$ * D's age after 4 years, so:

$$A + 4 = (1/8) * (D + 4) \rightarrow 8(A + 4) = D + 4 \rightarrow D = 8A + 28. \text{ (Equation 3)}$$

The sum of the ages of A, B, C, and D is 328:

$$A + B + C + D = 328 \rightarrow A + B + (4B - 12) + (8A + 28) = 328.$$

Simplifying:

$$9A + 5B + 16 = 328,$$

$$9A + 5B = 312. \text{ (Equation 4)}$$

Substitute $A = (4/5) * B - 6$ from Equation 1 into Equation 4:

$$9((4/5) * B - 6) + 5B = 312.$$

Simplifying:

$$(36/5) * B - 54 + 5B = 312,$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$(36/5 + 25/5) * B = 366,$$

$$(61/5) * B = 366,$$

$$B = (366 * 5) / 61 = 30.$$

57) Solution:

Let the present age of A (Amit) = $5x$ and the present age of B (Rohit) = $4x$.

The sum of the present ages of C (Neha) and A is 60:

$$C + A = 60 \rightarrow C + 5x = 60 \rightarrow C = 60 - 5x. \text{ (Equation 1)}$$

D (Priya) is 5 years younger than B:

$$D = B - 5 \rightarrow D = 4x - 5. \text{ (Equation 2)}$$

The average of the present ages of B, D, and C is $25\frac{1}{3}$:

$$(B + D + C) / 3 = 25\frac{1}{3} \rightarrow (4x + (4x - 5) + (60 - 5x)) / 3 = 25\frac{1}{3},$$

Simplifying:

$$(3x + 55) / 3 = 25\frac{1}{3},$$

$$3x + 55 = 76,$$

$$3x = 21,$$

$$x = 7.$$

Substituting $x = 7$ into Equation 1 and Equation 2:

$$C = 60 - 5(7) = 60 - 35 = 25,$$

$$D = 4(7) - 5 = 28 - 5 = 23.$$

The difference between the ages of C and D is:

$$25 - 23 = 2.$$

58) Solution:

Let the present ages of P, Q, and R be P, Q, and R respectively.

The sum of the present ages of P and Q equals the sum of the present ages of Q and R:

$$P + Q = Q + R \rightarrow P = R. \text{ (Equation 1)}$$

Q is 8 years younger than P:

$$Q = P - 8. \text{ (Equation 2)}$$

The present age of S is 28 years.

The average age of P, Q, R, and S is 20 years:

$$(P + Q + R + S) / 4 = 20 \rightarrow P + Q + R + 28 = 80,$$

$$P + Q + R = 52. \text{ (Equation 3)}$$

Substitute $Q = P - 8$ and $R = P$ from Equations 1 and 2 into Equation 3:

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$P + (P - 8) + P = 52,$$

$$3P - 8 = 52,$$

$$3P = 60,$$

$$P = 20.$$

Since $R = P$, the present age of R is 20 years.

59) Solution:

Let the present ages of X, Y, Z, and W be X, Y, Z, and W respectively.

The ratio of the age of X 5 years ago and the age of Y 7 years from now is 5:6:

$$(X - 5) / (Y + 7) = 5 / 6,$$

$$6(X - 5) = 5(Y + 7),$$

$$6X - 30 = 5Y + 35,$$

$$6X - 5Y = 65. \text{ (Equation 1)}$$

Z is 7 years younger than W, so:

$$Z = W - 7. \text{ (Equation 2)}$$

W is 2 years older than Y, so:

$$W = Y + 2. \text{ (Equation 3)}$$

The average present age of X, Y, Z, and W is 24 years:

$$(X + Y + Z + W) / 4 = 24,$$

$$X + Y + Z + W = 96. \text{ (Equation 4)}$$

Substitute $Z = W - 7$ and $W = Y + 2$ from Equations 2 and 3 into Equation 4:

$$X + Y + (Y + 2 - 7) + (Y + 2) = 96,$$

$$X + 3Y - 5 = 96,$$

$$X + 3Y = 101. \text{ (Equation 5)}$$

Now solve the system of equations (Equation 1 and Equation 5):

From Equation 1: $6X - 5Y = 65,$

From Equation 5: $X + 3Y = 101.$

Solving this system gives $X = 22$ and $Y = 23.$

From Equation 3, $W = Y + 2 = 23 + 2 = 25.$

60) Solution:

Let the present ages of the uncle and nephew be U and N, respectively.

Eight years ago, the ratio was 7:2:

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$(U - 8) / (N - 8) = 7 / 2 \rightarrow 2(U - 8) = 7(N - 8) \rightarrow 2U = 7N - 40. \text{ (Equation 1)}$$

After four years, the ratio will be 9:4:

$$(U + 4) / (N + 4) = 9 / 4 \rightarrow 4(U + 4) = 9(N + 4) \rightarrow 4U = 9N + 20. \text{ (Equation 2)}$$

Solving these two equations:

$$\text{From Equation 1: } 2U = 7N - 40,$$

$$\text{From Equation 2: } 4U = 9N + 20,$$

Solving gives $U = 50$ and $N = 20$.

$$\text{Aunt's age} = U - 6 = 50 - 6 = 44.$$

$$\text{After four years: Aunt} = 48, \text{ Nephew} = 24.$$

$$\text{Ratio of ages after 4 years} = 48:24 = 2:1.$$

61) Solution:

Let the present age of Mugil be 'x' years, then present age of Vijay = (x-14) and let present age of Vinay be 'y' years

From the given statements, we get the following equations:

$$(x-4) = (x-4-14) + (y-4)$$

$$\text{Hence, } (y-4) = x-4-x+18 = 14$$

$$y = 14 + 4 = 18$$

$$4 \text{ years in the future, } x+4 = 2(y+4) = 2*22 = 44$$

$$\text{so } x = 40$$

$$\text{Hence, present age of Vijay} = 40-14 = 26 \text{ years}$$

62) Solution:

Let present age of Santhosh = 'x' years. Then his mother's age = 2x

Then, we get the following equations from the given statements:

$$[2x - (x+4)] * 3 = (x-4) * 3 = 3x-12 = \text{Santhosh's dad's present age.}$$

$$3x-12 + 5 = 2x+12$$

$$\text{Hence, } x = 19 = \text{Santhosh's present age}$$

63) Solution:

Let the current ages of A, B and C be 'a', 'b' and 'c' respectively.

$$\text{then } (a+b+c)/3 = 34$$

$$a+b+c = 102 \rightarrow \text{(equation 1)}$$

$$\text{and, } (a+3+b+3)/2 = 32$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

Hence, $(a+b)/2 = 29$ and $a+b = 58$
substituting in (equation 1) we get $c = 44$
so, C's wife's age = $44 + 4 = 48$
And their average age = $(44+48)/2 = 92/2 = 46$
 $1/8$ of $46 = 5.75 = 5$ years and $(0.75*12) = 9$ months

64) Solution:

Let Kabilan's present age be 'x' years.
Then, Ranjith's present age = $2x+1$
let Kandhan's current age = $3(x-1) = 3x-3$
Average age of Kandhan and Ranjith = $(3x-3+2x+1)/2 = x+23$
i.e., $5x-2 = 2x+46$
 $3x = 48$
 $x = 16$
Hence, combined age of all three = $16 + (16*2 + 1) + (16*3 - 3)$
 $= 16 + 33 + 45 = 94$
Age of Ranjith's wife = $94 - 40 = 44$

65) Solution:

Let the age of X be 'x', and let the age of Y be 'y'
Then the age of Z = $x-15$
From the given statements, we get the following equations:
 $x+y+x-15 = 22*3 = 66 = 2x+y-15$
 $2x+y = 81 \rightarrow$ (equation 1)
Let the age of their father be 'a'. Then the age of their mother = $a-12$
Then, $a+(a-12) = 66*2 = 132$
 $2a = 144 \Rightarrow a=72$
So the age of their mother = 60 and so age of $y = 60-25 = 35$
Substituting the age of Y in (equation 1), we get $2x+35=81$
 $2x=46 \Rightarrow x=23$

66) Solution:

Let the age of Raman 36 years ago be 'x'
Then, Current age of Raman = $x+36$
current age of Murugan = $2x+36$
also, 47 years ago, age of Vetri = $3*(2x-11) = 6x-33$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

hence, current age of Vetri = $6x+14$

Given, $(x+8) + (2x+8) + (6x-14) = 74$

i.e., $9x + 2 = 74$

$x = 72/9 = 8$

Hence, current age of Raman = $8+36 = 44$

and so his age at the time of his marriage = 46

67) Solution:

Let the age of Mri 14 years ago be 'x'

Then current age of Mri = $x+14$

and current age of Kim = $2x+14$

Age of gook 9 years in the future = $(x+23) * 6/5 = (6x+138)/5$

and so current age of gook = $(6x+93)/5$

Sum of ages of all three, 2 years ago = $(x+12) + (2x+12) + (6x+83)/5 = 3*(x+12) + 7$

i.e. $3x+24+(6x+83)/5 = 3x+43$

i.e. $6x+83 = 95$

$6x = 95-83 = 12$

Hence $x=12$

So current age of Gook = 21

Age of Kim 5 years ago = 13

68) Solution:

Let the current age of X be 'x'

Then, current age of X's father = '3x'

current age of X's mother = $(3x-3)$

Current age of X's only sister = 8

so, $3x-3 = 8*5 + 2 = 42$

$3x = 45$

$x = 15$

So combined age of all family members 8 years in the future = $15 + 45$

+ $42 + 8 + (8*4)$

= $15 + 45 + 42 + 8 + 32 = 142$

69) Solution:

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

Couples got married 7 years ago and the wife gave birth 4 years after marriage. So current age of the child = 3 years

22 years in the future, age of the child = $3 + 22 = 25$ years

So, 22 years in the future, age of Sendhil = 50 years

Hence, current age of Sendhil = 28 years

So, current age of Asin = $57 - (28 + 3) = 57 - 31 = 26$

Hence age of Asin at the time of marriage = $26 - 7 = 19$

70) Solution:

$$(Rahul + 4)/(Sneha - 8) = 7/4$$

$$4Rahul = 7Sneha - 72$$

$$Rahul = (7/4) * Sneha - 18 \dots\dots (1)$$

$$(Father + 2)/(Sneha - 3) = 3/1$$

$$Father = 3Sneha - 11 \dots\dots (2)$$

$$(Rahul + Sneha + Father)/3 = 44$$

$$Rahul + Sneha + Father = 132 \dots\dots (3)$$

Put equation (1) and (2) in equation (3),

$$(7/4) * Sneha - 18 + Sneha + 3Sneha - 11 = 132$$

$$(23/4) * Sneha = 161 \text{ Sneha} = 28 \text{ years.}$$

So,

Rahul = 31 years and Rahul's father = 73 years old.

Rahul got married in 2020 which is 3 years ago, So, in 2020, the age of his father was 70 years.

So, his father was born in the year 1950.

71) Solution:

Let the age of Ram = X years.

So,

Shyam = 3X, and Nakul = 2X

$$(Shyam + 5)/(Nakul + 5) = 10/7$$

$$(3X + 5)/(2X + 5) = 10/7$$

$$X = 15 \text{ years}$$

So,

$$(Shyam + 5)/(Aniket + 5) = 10/9$$

$$9 * (3X + 5) = 10 * (Aniket + 5)$$

$$\text{Aniket} = 40 \text{ years.}$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

So, Ram + Aniket = $15 + 40 = 55$ years

72) Solution:

Father age = 28 years at that time Sister was born

Mother age = 26 years at the time brother was born,

So sister age = 4

At the time of sister born, Mother age = $26 - 4 = 22$

Required ratio = $28:22 = 14:11$

73) Solution:

The average age of the couple = 30 years.

So the sum of their ages = 60 years.

The average age becomes 16 years when they give birth to twins.

So the sum of the age of the family = $16 * 4 = 64$ years

It is the total age of the couple when the twins are born.

So, the difference in ages of the couple before giving birth and after giving birth is $64 - 60 = 4$ years.

In these 4 years, the age of both i.e. husband and wife is considered.

Hence we can say the couple gave birth to twins after 2 years.

When they gave birth to a third child, the average age of the family became 15.2 years.

Hence the total age of the family becomes $15.2 * 5 = 76$ years

So, the difference of ages before and after the third child = $76 - 64 = 12$ years

Here the age of the couple and the twins are included, so after $12/4 = 3$ years the third child is born.

The current average of the family is 20 years.

So, the total age of the family is $20 * 5 = 100$ years.

So, the age of 3rd child = $100 - 76 = 24$ years.

Here the age of the couple, the twins and 3rd child also included, so after $24/5 = 4.8$ years

And the third child is born 3 years from the birth of the twins.

So, we can say that the current age of the twins is 7.8 years.

74) Solution:

$A + B + C + D = 4 * 41.5 = 166$ years..... (1)

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$(A + 5)/C = 10/7$$

$$7A + 35 = 10C$$

$$A = (1/7) * (10C - 35) \dots\dots (2)$$

$$A/D = 15/16$$

$$D = (16/15) * A \dots\dots (3)$$

$$B - C = 3$$

$$B = C + 3 \dots\dots (4)$$

Make equation (1) in the form of A and C,

Put equations (3) and (4) in equation (1),

$$A + (C + 3) + C + (16/15) * A = 166$$

$$(31/15) * A + 2C = 163 \dots\dots (5)$$

Put equation (2) in equation (5),

$$(31/15) * (1/7) * (10C - 35) + 2C = 163$$

$$C = 35 \text{ years.}$$

$$\text{So, } B = 38 \text{ years.}$$

75) Solution:

$$\text{Sum of the ages of 7 students} = 7 * 18 = 126 \text{ years.}$$

$$\text{The sum of the last three students} = 3 * 20 = 60 \text{ years.}$$

$$\text{So, the sum of the ages of the students in the class is } 126 + 60 = 186 \text{ years.}$$

$$\text{The average age of the class including the age of teacher} = 21$$

$$21 = (186 + T)/11$$

$$T (\text{Age of teacher}) = 45 \text{ years.}$$

$$\text{So, in 2021, the age of the teacher is 45 years, So the teacher was born in 1976.}$$

76) Solution:

$$\text{Let Nikhil} = 5a, \text{ Ramesh} = 6a$$

$$\text{Then Tarun} = 6a - x$$

$$\text{Deepak} = (2/3)(6a - x) = 4a - (2x)/3$$

$$\text{Now, Nikhil} - \text{Deepak} = 7 \Rightarrow$$

$$5a - [4a - (2x)/3] = 7 \Rightarrow a + (2x)/3 = 7 \Rightarrow (2x)/3 = 7 - a \text{ ---(i)}$$

$$\text{Average of Ramesh, Tarun, Deepak} = 25 \Rightarrow$$

$$[6a + (6a - x) + (4a - 2x/3)] / 3 = 25$$

$$(16a - (5x)/3) / 3 = 25 \Rightarrow$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$16a - (5x)/3 = 75 \text{ —(ii)}$$

$$\text{From (i): } (2x)/3 = 7 - a \Rightarrow x = (3/2)(7 - a)$$

Put in (ii):

$$16a - (5/3) \times (3/2)(7 - a) = 75$$

$$16a - (5/2)(7 - a) = 75$$

$$16a - (35/2) + (5a/2) = 75$$

Multiply all terms by 2:

$$32a - 35 + 5a = 150 \Rightarrow 37a = 185 \Rightarrow a = 5$$

$$\text{Now } x = (3/2)(7 - 5) = (3/2)(2) = 3$$

$$\text{So, Eshan's age} = 5x + 2 = 5 \times 3 + 2 = 17$$

77) Solution:

Let son's present age = $5x$, so mother's age = $9x$

$$\text{Average of mother and son} = (5x + 9x)/2 = 7x$$

This is daughter's age after 5 years $\Rightarrow$

$$\text{So daughter's present age} = 7x - 5$$

Also, after 5 years:

$$\text{Son's age} = 5x + 5$$

$$\text{Daughter's age} = 7x - 5 + 5 = 7x$$

$$\text{Ratio: } (5x + 5) : 7x = 6 : 7$$

$$\Rightarrow (5x + 5)/7x = 6/7$$

Cross-multiply:

$$7(5x + 5) = 42x \Rightarrow 35x + 35 = 42x \Rightarrow 7x = 35 \Rightarrow x = 5$$

So present ages:

$$\text{Son} = 25, \text{Mother} = 45, \text{Daughter} = 30, \text{Father} = \text{age at son's birth} + \text{son's current age} = 25 + 25 = 50$$

$$\text{Sum} = 25 + 45 + 30 + 50 = 150$$

78) Solution:

The average age of X, Y, and Z after three years = 31 years

$$\text{The current average age of X, Y, and Z} = 31 - 3 = 28 \text{ years}$$

$$\text{The total age of X, Y, and Z} = 28 * 3 = 84 \text{ years}$$

$$\text{The average age of X, Y, Z, A, and B together} = 28 + 2 = 30 \text{ years}$$

$$\text{The total age of X, Y, Z, A, and B together} = 5 * 30 = 150 \text{ years}$$

$$\text{The sum of the ages of A and B} = 150 - 84 = 66 \text{ years}$$

The present age of B is 20% more than A

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

Ratio between A and B's present age = $100:120 = 5:6$

Present age of A = $66/11 * 5 = 30$ years

Present age of B = $66/11 * 6 = 36$ years

The present age of B is 50% more than X

Ratio between X and B's present age = $100:150 = 2:3$

Present age of X = $36 * 2/3 = 24$ years

The sum of the ages of Y and Z = $84 - 24 = 60$ years

Present age of Z = $(60 - 4)/2 = 28$ years

79) Solution:

The present average age of Zeus, Ares, Hermes, and Athena = 39 years

The total age of Zeus, Ares, Hermes, and Athena = $39 * 4 = 156$ years

Let the present ages of Zeus, Ares, Hermes, and Athena be a, b, c, and d, respectively.

The ratio between Zeus's age 4 years ago and Hermes's age 2 years from now = $5:3$

$$(a - 4)/(c + 2) = 5/3$$

$$3a - 12 = 5c + 10$$

$$5c = 3a - 22$$

$$c = (3a - 22)/5 \text{ ---(1)}$$

Ares's age 2 years ago was 75% of Athena's age at that time

$$(b - 2)/(d - 2) = 3/4$$

$$4b - 8 = 3d - 6$$

$$3d = 4b - 2 \text{ ---(2)}$$

The ratio between Zeus's present age and Athena's age 3 years from now = $6:5$

$$a/(d + 3) = 6/5$$

$$5a = 6d + 18$$

$$6d = 5a - 18$$

$$d = (5a - 18)/6 \text{ ---(3)}$$

Solving equations (1) and (2):

$$8b - 4 = 5a - 18$$

$$8b = 5a - 14$$

$$b = (5a - 14)/8 \text{ ---(4)}$$

Substituting into the total sum equation:

$$a + (5a - 14)/8 + (3a - 22)/5 + (5a - 18)/6 = 156$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

Simplifying the equation:

$$120a + 15(5a - 14) + 24(3a - 22) + 20(5a - 18) = 120 * 156$$

$$120a + 75a - 210 + 72a - 528 + 100a - 360 = 18720$$

$$367a = 19818$$

$$a = 54$$

The present age of Zeus = 54 years

80) Solution:

Let the age of the youngest person be X, and let D is the common difference of the age between two friends.

So the ages of the other 4 are, X + D, X + 2D, X + 3D, and X + 4D.

So,

$$((X + 4D) + (X + 3D) + (X + 2D) + (X + D))/4 = 26$$

$$2X + 5D = 52 \dots\dots (1)$$

$$(X + (X + D) + (X + 2D) + (X + 3D))/4 = 22$$

$$2X + 3D = 44 \dots\dots (2)$$

From equations (1) and (2),

$$D = 4,$$

Hence X = 16 so the age of the youngest person is 16 years and the age of other friends is 20, 24, 28, and 32 years.

So the average age of all the friends is $(16 + 20 + 24 + 28 + 32)/5 = 24$ years.

81) Solution:

Father present age in 2021 = 65 years

The present age of neha = $65 * (7/13) = 35$ years

Rakesh present age = 40 years

Let x years got married,

$$65 - x / 40 - x = 2/1$$

$$65 - x = 80 - 2x$$

$$x = 15 \text{ years}$$

So Rakesh and Neha get married 15 years ago in 2006.

82) Solution:

The average age of the family members = 42 years,

So the sum of the ages of the family members = $5 * 42 = 210$ years.

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

After 5 years, the oldest person expired.

So, after 5 years the total age of the family = $210 + 25 = 235$ years.

The sum of the ages of 4 years = $235 - 65 = 170$ years

After 20 years, the age of 4 becomes = $170 + 4 * 20 = 250$ years

The age of newly born after 20 years of the death of the eldest member is 19 years.

So, the average age = $(250 + 19)/5 = 53.8$ years.

83) Solution:

Initial total age = $20(x + 2)$

After removing 3 members:

New average = $x + 3$

New total = $17(x + 3)$

So,

$$20(x + 2) - (5y + 9) = 17(x + 3)$$

$$20x + 40 - 5y - 9 = 17x + 51$$

$$3x - 5y = 20 \dots(1)$$

Now, 4 new people added:

New average = $x + 2.25$

New total = $24(x + 2.25)$

So,

$$20(x + 2) + (9y - 6) = 24(x + 2.25)$$

$$20x + 40 + 9y - 6 = 24x + 54$$

$$-4x + 9y = 20 \dots(2)$$

Solving equations (1) and (2):

$$\text{From (1): } 3x - 5y = 20$$

$$\text{From (2): } -4x + 9y = 20$$

$$\text{Multiply (1) by 4: } 12x - 20y = 80$$

$$\text{Multiply (2) by 3: } -12x + 27y = 60$$

$$\text{Add both: } 7y = 140 \rightarrow y = 20$$

$$\text{Sub in (1): } 3x - 100 = 20 \rightarrow x = 40$$

$$x + y = 40 + 20 = 60$$

84) Solution:

Let present ages be:

$$A = a, B = b, C = c, D = d, E = e$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

Given:

(1) Average of A, B, C, D, E = 38

$$\Rightarrow a + b + c + d + e = 190$$

(2) Average of B, C, E after $2/3$ years = $38(2/3) = 116/3$

$$\Rightarrow (b + 2/3 + c + 2/3 + e + 2/3)/3 = 116/3$$

$$\Rightarrow (b + c + e + 2)/3 = 116/3$$

$$\Rightarrow b + c + e = 114$$

(3) $b > (a + d)/2$ and $b < a$

$$(4) d = e + 5$$

$$(5) c + 2 = a - 5 \Rightarrow a = c + 7$$

$$(6) c + 7 = d + 10 \Rightarrow c = d + 3$$

Now substitute:

$$\text{From (4): } d = e + 5$$

$$\text{From (6): } c = e + 5 + 3 = e + 8$$

$$\text{From (5): } a = (e + 8) + 7 = e + 15$$

So:

$$a = e + 15$$

$$c = e + 8$$

$$d = e + 5$$

Now plug into (1):

$$a + b + c + d + e = 190$$

$$\Rightarrow (e + 15) + b + (e + 8) + (e + 5) + e = 190$$

$$\Rightarrow 4e + b + 28 = 190 \Rightarrow 4e + b = 162 \dots (i)$$

$$\text{From (2): } b + c + e = 114$$

$$\Rightarrow b + (e + 8) + e = 114 \Rightarrow b + 2e = 106 \dots (ii)$$

Solve (i) and (ii):

$$\text{From (ii): } b = 106 - 2e$$

Put into (i):

$$4e + (106 - 2e) = 162 \Rightarrow 2e + 106 = 162$$

$$\Rightarrow 2e = 56 \Rightarrow e = 28$$

Then:

$$b = 106 - 56 = 50$$

$$c = e + 8 = 36$$

$$d = e + 5 = 33$$

$$a = e + 15 = 43$$

$$\text{Now, required difference} = a - (e + 5) = 43 - 33 = 10$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

85) Solution:

Let $Q = q$

Then $P = 12.5\%$ more than $Q \Rightarrow P = (9/8) \times q = 9q/8$

Also, $P : R = 4 : 5 \Rightarrow$

$(9q/8) : r = 4 : 5$

$\Rightarrow (9q/8) \div r = 4/5 \Rightarrow (9q/8) = (4/5) \times r$

$\Rightarrow r = (9q/8) \times (5/4) = (45q/32)$

Also, P is 10% less than $S \Rightarrow$

$P = 90\%$ of $S \Rightarrow 9q/8 = 0.9s \Rightarrow s = (9q/8) \div 0.9 = (9q/8) \times (10/9) = 10q/8 = 5q/4$

Also, difference between S and T is 8 years and $S > T \Rightarrow$

$s - t = 8 \Rightarrow t = s - 8 = (5q/4) - 8$

Also, $R + 15 = S + 20 \Rightarrow r = s + 5$

Substitute values:

$r = (45q/32), s = (5q/4)$

$\Rightarrow (45q/32) = (5q/4) + 5$

Convert RHS to same denominator:

$5q/4 = 40q/32$

$\Rightarrow 45q/32 = 40q/32 + 5$

$\Rightarrow 5q/32 = 5 \Rightarrow q = 32$

Now calculate all values:

$Q = q = 32$

$P = 9q/8 = 9 \times 32/8 = 36$

$R = 45q/32 = 45 \times 32/32 = 45$

$S = 5q/4 = 5 \times 32/4 = 40$

$T = S - 8 = 40 - 8 = 32$

U 's age after 8 years $= 120\%$ of $(T + 8)$

$= 1.2 \times (32 + 8) = 1.2 \times 40 = 48 \Rightarrow U = 48 - 8 = 40$

$U \times V = 960 \Rightarrow 40 \times V = 960 \Rightarrow V = 24$

Required sum $= Q + R + V = 32 + 45 + 24 = 101$

86) Solution:

Let Ankit's current age $= A$

Let Nisha's current age $= N$

Let Devika's current age $= D$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

From the question:

Devika's age after 10 years = 18

$$\Rightarrow D + 10 = 18 \Rightarrow D = 8$$

Devika's age after 8 years is half of Nisha's current age:

$$D + 8 = \frac{1}{2} \times N \Rightarrow 8 + 8 = \frac{1}{2} \times N \Rightarrow 16 = \frac{1}{2} \times N \Rightarrow N = 32$$

Ankit's age after 18 years = Nisha's age after 10 years:

$$A + 18 = N + 10 \Rightarrow A + 18 = 32 + 10 \Rightarrow A = 42 - 18 = 24$$

Now total age after 6 years:

$$A + 6 + N + 6 + D + 6 = 24 + 6 + 32 + 6 + 8 + 6 = 82$$

$$\text{Half of that} = 82 \div 2 = 41$$

Ankit's current age = 24

87) Solution:

Let present ages be:

Rohan = A, Kabir = B, Arjun = C

$$\text{Given: } A + B + C = 110 \text{ — (1)}$$

Also, when Kabir was 50% of his current age, i.e., $B/2$,

At that time: $B/2 = A - x + C - x \rightarrow$ where x = number of years ago

Since that was $B/2$ years ago, so:

$$x = B - B/2 = B/2$$

So:

$$B/2 = A - B/2 + C - B/2$$

$$\Rightarrow B/2 = (A + C - B)/2$$

Multiply both sides by 2:

$$B = A + C - B$$

$$\Rightarrow 2B = A + C \text{ — (2)}$$

$$\text{From (1): } A + B + C = 110$$

Substitute $A + C = 2B$ from (2):

$$2B + B = 110 \Rightarrow 3B = 110 \Rightarrow B = 110/3 = \text{not an integer}$$

So, recheck logic:

Assume Shivam = S, Amit = A, Vivek = V

$$\text{Given: } A + S + V = 110 \text{ — (1)}$$

Also, when $S = 0.5S \Rightarrow$ that was $S/2$ years ago

At that time:

$$A's \text{ age} = A - S/2, V's \text{ age} = V - S/2$$

$$\text{Given: } 0.5S = A - S/2 + V - S/2 = A + V - S \text{ — (2)}$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

From (1): $A + V = 110 - S$

Substitute into (2):

$$0.5S = (110 - S) - S \Rightarrow 0.5S = 110 - 2S$$

$$\Rightarrow 0.5S + 2S = 110$$

$$\Rightarrow 2.5S = 110 \Rightarrow S = 44$$

$$\text{Now, } A + V = 110 - 44 = 66$$

$$\text{So } A + V \text{ after 14 years} = 66 + 28 = 94$$

88) Solution:

Let the present ages be:

$$\text{Ananya's age} = (y + 10)$$

$$\text{Neha's age} = (y + 2)$$

$$\text{Ritika's age} = 2y$$

Statement I:

The average age of Ananya and Neha together:

$$(y + 10) + (y + 2) = 2y + 12$$

The average of these two ages is $(2y + 12)/2 = y + 6$

The average age of Neha and Ritika together:

$$(y + 2) + 2y = 3y + 2$$

The average of these two ages is $(3y + 2)/2$

According to Statement I:

$$y + 6 = (3y + 2)/2 - 10$$

Simplifying:

$$y + 6 + 10 = (3y + 2)/2$$

$$y + 16 = (3y + 2)/2$$

Multiply both sides by 2:

$$2(y + 16) = 3y + 2$$

$$2y + 32 = 3y + 2$$

Solve for y:

$$32 - 2 = 3y - 2y \rightarrow y = 30$$

$$\text{Thus, Ananya's present age} = y + 10 = 30 + 10 = 40$$

Statement II:

The average age of Ananya and Ritika together:

$$(y + 10) + 2y = 3y + 10$$

The average of these two ages is $(3y + 10)/2$

The average age of Neha and Ritika together:

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$(y + 2) + 2y = 3y + 2$$

The average of these two ages is $(3y + 2)/2$

According to Statement II:

$$(3y + 10)/2 = (3y + 2)/2 + 4$$

Simplifying:

$$3y + 10 = 3y + 2 + 8$$

$$3y + 10 = 3y + 10$$

This is true for all values of y , meaning no new information is obtained from Statement II.

Conclusion:

Statement I alone is sufficient to find y , and consequently, the present age of Ananya (Shivani in the original problem). Statement II does not provide enough information to determine y .

89) Solution:

Let the ages of:

$$\text{Raghav (P)} = 3x$$

$$\text{Bhavin (Q)} = 2x$$

$$\text{Let Neel (R)} = R$$

We're given:

$$|Q - R| = 12, \text{ i.e., } |2x - R| = 12$$

$$\text{We need: } |3x - R| = ?$$

Statement I:

Max difference between any two of the three is 36.

$$\text{Case 1: Assume } Q > R \Rightarrow R = 2x - 12$$

$$\text{Then } P = 3x$$

$$\Rightarrow P - R = 3x - (2x - 12) = x + 12$$

$$\text{So max difference} = x + 12$$

$$\text{Set } x + 12 = 36 \Rightarrow x = 24$$

$$\Rightarrow P = 72, Q = 48, R = 36$$

$$\text{Then } |P - R| = 36 \quad \checkmark$$

Unique solution found.

Statement I alone is sufficient.

Statement II:

$$|P - Q| = 66.67\% \text{ of } R \Rightarrow x = (2/3)R \Rightarrow R = (3/2)x$$

Now plug into $|Q - R| = 12$:

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$2x - (3/2)x = 12 \Rightarrow (4x - 3x)/2 = 12 \Rightarrow x = 24$$

Then $P = 72$, $Q = 48$, $R = 36$

$$|P - R| = 36 \quad \checkmark$$

Statement II alone is sufficient.

Statement III:

$$R = 50\% \text{ of } P \Rightarrow R = (1/2)(3x) = (3/2)x$$

$$\text{Again use: } |Q - R| = 12 \Rightarrow 2x - (3/2)x = 12$$

$$\Rightarrow (1/2)x = 12 \Rightarrow x = 24$$

Then $P = 72$, $R = 36$

$$|P - R| = 36 \quad \checkmark$$

Statement III alone is also sufficient.

90) Solution:

Given:

Total employees = 10 (P to Y).

The ratio of ages of X, P, Q, and R is 5:3:3:3. Let their ages be $5k$, $3k$, $3k$, and $3k$ respectively.

The age of S = 30 years.

The average age of the remaining 5 employees is 7.6 years more than the average age of all 10 employees.

Let the total age of all employees be T . From the information that S's age is $1/12$ th of the total sum of ages, we can say:

$$S = T / 12$$

$$30 = T / 12$$

$$T = 360$$

Thus, the total sum of the ages of all 10 employees is 360 years.

For I:

We need to find the difference between the average age of P, Q, R, and X, and the age of S.

The total age of P, Q, R, and X is:

$$5k + 3k + 3k + 3k = 14k$$

$$\text{The average age of P, Q, R, and X} = 14k / 4 = 3.5k$$

The age of S is 30.

So, the difference between the average age of P, Q, R, and X and the age of S is:

$3.5k - 30$. This value can be calculated.

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

For II:

The sum of the ages of R and X = $3k + 3k = 6k$,

The sum of the ages of P and Q = $3k + 3k = 6k$.

So, the difference between these sums is:

$6k - 6k = 0$. This value can also be calculated.

For III:

The average age of X, S, and T = 32 years, so the total age of X, S, and T = $32 \times 3 = 96$.

The age of S is 30, so the sum of the ages of X and T is $96 - 30 = 66$.

Therefore, the ratio of the ages of X to T = $5k / T$. This can be calculated based on the above information.

91) Solution:

Step 1: Analyze the Statements

Statement I:

The average of the present ages of Ravi and Raghav is 35 years:

$$(V + R) / 2 = 35 \rightarrow V + R = 70.$$

We are asked to find $7A + 4V$.

While this provides a relationship between Ravi and Raghav, it doesn't directly allow us to solve for $7A + 4V$ without knowing the values of A and V.

Statement II:

7 years ago, the ratio of ages of Arvind and Krish was 1:3:

$$(A - 7) / (K - 7) = 1 / 3 \rightarrow A - 7 = (1 / 3)(K - 7).$$

We are asked to find $12A - 4V$.

This provides another equation involving A and V, but it still doesn't fully solve the problem by itself.

Statement III:

4 years from now, Ravi's age will be 40% more than Arvind's present age:

$$V + 4 = 1.4A \rightarrow V = 1.4A - 4.$$

We are asked to find the ratio of the present ages of Raghav to Ravi 1 year from now:

$$(R + 1) / (V + 1).$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

This gives a relationship between Ravi and Arvind's present ages and helps calculate the required ratio. However, we still need additional information to solve for the required values.

Step 2: Combining the Statements

Statement I provides $V + R = 70$.

Statement III provides $V = 1.4A - 4$, which helps in finding the relationship between Ravi's and Arvind's ages.

Combining Statement I and Statement III gives enough information to solve for Arvind, Ravi, and Raghav's present ages and to calculate the required ratio of their ages.

Therefore, either Statement I or Statement III alone is sufficient to solve the problem.

Correct Answer:

B. Either I or III alone is sufficient.

92) Solution:

We are given that the ratio of the current ages of X and Z is 4:7. Our task is to determine the current ages of Y and W.

Statement I:

Y is 5 years older than Z and 20 years older than X.

$$Y = Z + 5$$

$$Y = X + 20$$

W is 5 years older than X.

$$W = X + 5$$

This statement gives us relationships between Y, Z, and X, as well as the relationship between W and X. However, without knowing the exact values of X or Z, we cannot determine the values of Y and W. Therefore, Statement I alone is not sufficient.

Statement II:

The present age of Z is 35 years.

$$Z = 35$$

W is 10 years younger than Z and 15 years younger than Y.

$$W = Z - 10$$

$$W = Y - 15$$

Substituting $Z = 35$:

$$W = 35 - 10 = 25$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$W = Y - 15 \rightarrow Y = W + 15 = 25 + 15 = 40$$

From this statement, we can directly determine the ages of Y and W, making Statement II alone sufficient.

Statement III:

W is the youngest of all.

This only tells us that W is younger than X, Y, and Z but does not give any specific ages.

The ratio of the ages of W and Y is 5:8.

$$W/Y = 5/8 \rightarrow W = (5/8) * Y$$

While this gives a relationship between W and Y, it doesn't provide enough information to calculate their exact ages. Statement III alone is not sufficient.

Conclusion:

Since Statement II alone is sufficient to determine the ages of Y and W, the correct answer is:

D. Both I and II together are sufficient

93) Solution:

Quantity-I:

Let, the present age of Rakesh = $3u$ and Pritam = $8u$

Given that,

$$3u + 3 = 8u - 17$$

$$u = 4$$

The age of Vikrant after five years = $3 * 4 + 3 + 5 = 20$ years

Quantity-II:

Let the age of Akash and Vikash 10 years ago be $11x$ and x respectively.

$$\text{Then, } (11x + 10 + 8)/(x + 10 + 8) = 2/1$$

$$\Rightarrow (11x + 18)/(x + 18) = 2/1$$

$$\Rightarrow 11x + 18 = 2 * (x + 18)$$

$$\Rightarrow 11x + 18 = 2x + 36$$

$$\Rightarrow 9x = 18$$

$$\Rightarrow x = 2$$

Now, present age of Vikash = $x + 10$

$$= 2 + 10$$

$$= 12 \text{ years}$$

Thus, the present age of Vikash is 12 years.

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

Quantity-I > Quantity-II

94) Solution:

Quantity-I

The present age of Rohit = x years

The present age of Priya = $(x + 14)$ years

$$(x - x + 5)/(x - 5) * 100 = (x + 14 - x - 7)/(x + 7) * 100$$

$$5/(x - 5) = 7/(x + 7)$$

$$5x + 35 = 7x - 35$$

$$2x = 70$$

$$x = 35$$

After 3 years the age of Rohit = $35 + 3 = 38$ years

Quantity-II

Average = (Sum of values)/(Number of values)

Calculation:

Let the sum of the age of two replaced persons be x years.

Total age of 24 people = $24 * 25 = 600$ years

$$\text{Then, } (600 - x + 40 + 44)/24 = 25 + 0.5$$

$$\Rightarrow (684 - x)/24 = 25.5$$

$$\Rightarrow 684 - x = 612$$

$$\Rightarrow x = 72$$

Now, required average = $72/2$

= 36 years

Quantity-I > Quantity-II

95) Solution:

Quantity-I

Let, the present age of P = $2x - 2$ years and Q = $5x - 2$ years

The present age of W = $(2x - 2) * 3/2 = 3x - 3$ years

Given that,

$$2x - 2 - 1.5 + 5x - 2 - 1.5 + 3x - 3 - 1.5 = 28.5$$

$$10x = 40$$

$$x = 4$$

Required present age of Q = $5 * 4 - 2 = 18$ years

Quantity-II

Let the present ages of Jack, Susie and Peter be respectively 'j', 's' and 'p'

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

According to the question, $j=2s$

$$(s-4) = 3(p-4)$$

$$s-4 = 3p-12$$

$$p = (s+8)/3$$

Also given, $j+5+s+5+p+5 = 51$

$$j+s+p = 36$$

Re-writing the above equation in terms of 's', we get

$$2s + s + (s+8)/3 = 36$$

$$9s + s + 8 = 36 \times 3 = 108$$

$$10s = 108 - 8 = 100$$

$$s = 10$$

Therefore, the present age of Susie = 10 years

Quantity-I > Quantity-II

96) Solution:

Quantity-I

The present age of Piyush = 12 years

2 years ago, the age of Piyush = $12 - 2 = 10$ years

Given that,

$$12 + w = 10 \times 150/100$$

$$w = 3$$

Given that,

$$(5u - 4)/(7u - 4) = 2/3$$

$$15u - 12 = 14u - 8$$

$$u = 4$$

Required present age of Philips = $4 \times 7 = 28$ years

Quantity-II

Let the age of the daughter be x , then according to the question,

$$46 - x = x + 6$$

$$x = 20$$

The daughter will be 28 years old at the required time

Quantity-I = Quantity-II

97) Solution:

Quantity I:

Let the ages be:

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$a - 3d, a - d, a + d, a + 3d$ (AP of 4 terms)

Average = a

Given:

Average = Third person's age - 10 = $a + d - 10 \rightarrow a = a + d - 10 \rightarrow d = 10$

Also, ratio of 2nd to 3rd:

$$(a - d) / (a + d) = 2 / 3$$

Cross-multiplied: $3a - 3d = 2a + 2d \rightarrow a = 5d = 50$

So, terms:

$a - 3d = 20, a - d = 40, a + d = 60, a + 3d = 80$

Difference of eldest and youngest = $80 - 20 = 60$

Quantity II:

Sum of ages = $5 \times 39 = 195$

Let youngest = $x \rightarrow$ Eldest = $x + 52$

Let 2nd eldest = $(5/2)x$

One member is $x + 4$

One member is 40

Sum: $x + (x + 52) + (5/2)x + (x + 4) + 40 = 195$

$\rightarrow (9.5)x + 96 = 195 \rightarrow (9.5)x = 99 \rightarrow x = 198 / 19 = \text{not integer}$

Try $x = 10 \rightarrow \text{LHS} = 10 + 62 + 25 + 14 + 40 = 151$

Try $x = 12 \rightarrow 12 + 64 + 30 + 16 + 40 = 162$

Try $x = 14 \rightarrow 14 + 66 + 35 + 18 + 40 = 173$

Try $x = 16 \rightarrow 16 + 68 + 40 + 20 + 40 = 184$

Try $x = 18 \rightarrow 18 + 70 + 45 + 22 + 40 = 195 \quad \checkmark$

So, Eldest = $18 + 52 = 70$

Final Answer:

Quantity I = 60, Quantity II = 70

Answer: Quantity I < Quantity II

98) Solution:

Quantity I: Let $A = 2x, B = 3x$

Average age = 36 $\Rightarrow (2x + 3x + C)/3 = 36 \Rightarrow 5x + C = 108$

$C = D + 19$

$(C + 5)/(D + 5) = 43/24$

$\Rightarrow (D + 24)/(D + 5) = 43/24 \Rightarrow$ Cross-multiplied and solved $\Rightarrow D = 19 \Rightarrow$

$C = 38$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$5x = 70 \Rightarrow x = 14 \Rightarrow A = 28 \Rightarrow A \text{ after 5 yrs} = 33$$

$$\text{Quantity II: } E \times F = 1176, E/F = 2/3 \Rightarrow E = 28, F = 42$$

$$G = E + 5 = 33$$

$$\begin{aligned} \text{Quantity III: } H + \text{Father} &= 60, \text{Father} = \text{Mother} + 5, \text{Mother} = H + 25 \\ \Rightarrow H + (H + 30) &= 60 \Rightarrow 2H = 30 \Rightarrow H = 15 \Rightarrow \text{Mother} = 15 + 25 = 40 \end{aligned}$$

Answer:

(c) Quantity III > Quantity I = Quantity II ☒

99) Solution:

Quantity I:

Solution: The total age of the 32 people is: $32 * 11 = 352$ years.

When the leader is included, the total number of people becomes 33, and the new average age is 12 years: $33 * 12 = 396$ years.

Thus, the leader's age is: $396 - 352 = 44$ years.

Quantity II:

Solution: Let Anjali's current age be A and Ashutosh's current age be B.

From the first condition: $(A + 10) / (B - 8) = 7 / 6$

$$\Rightarrow 6(A + 10) = 7(B - 8)$$

$$\Rightarrow 6A + 60 = 7B - 56$$

$$\Rightarrow 6A - 7B = -116 \text{ [Equation 1]}$$

From the second condition: $(A - 8) / (B + 8) = 4 / 5$

$$\Rightarrow 5(A - 8) = 4(B + 8)$$

$$\Rightarrow 5A - 40 = 4B + 32$$

$$\Rightarrow 5A - 4B = 72 \text{ [Equation 2]}$$

Now, solve these two equations: From Equation 1:

$$6A - 7B = -116$$

From Equation 2:

$$5A - 4B = 72$$

Multiply Equation 2 by 6 and Equation 1 by 5: $30A - 24B = 432$

$$30A - 35B = -580$$

Subtract the second equation from the first: $(30A - 24B) - (30A - 35B) = 432 - (-580)$

$$\Rightarrow 11B = 1012$$

$$\Rightarrow B = 92$$

Now substitute $B = 92$ in Equation 2:

$$5A - 4(92) = 72$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$\Rightarrow 5A - 368 = 72$$

$$\Rightarrow 5A = 440$$

$$\Rightarrow A = 88$$

Thus, Anjali's current age is 88. To find her age 40 years ago: $88 - 40 = 48$ years.

Quantity III:

Let the current ages of P, Q, R, and S be P, Q, R, and S respectively.

P's age is 20% less than Q's age:

$$P = 0.8Q$$

R's age after 6 years equals Q's age 6 years ago:

$$R + 6 = Q - 6$$

$$\Rightarrow R = Q - 12$$

R's age is 50% more than S's age:

$$R = 1.5S$$

The average age of P, Q, and R is 80 years:

$$(P + Q + R) / 3 = 80$$

$$\Rightarrow P + Q + R = 240$$

Substitute $P = 0.8Q$ and $R = Q - 12$ into the equation: $(0.8Q + Q + (Q - 12)) = 240$

$$\Rightarrow 2.8Q - 12 = 240$$

$$\Rightarrow 2.8Q = 252$$

$$\Rightarrow Q = 252 / 2.8 = 90$$

Now substitute $Q = 90$ into $R = Q - 12$: $R = 90 - 12 = 78$

Substitute $R = 78$ into $R = 1.5S$: $78 = 1.5S$

$$\Rightarrow S = 78 / 1.5 = 52$$

Thus, the current age of S is 52 years.

100) Solution:

Quantity I

Let, the present age of Rohan = $4u$ years, Sourav = $3u$ years, and Jitu = $6u$ years

Given that,

$$4u + 3u + 6u = 3P + 21$$

$$13u - 3P = 21 \dots\dots\dots (i)$$

Given that,

$$6u - 3u = P - 1$$

Problem on Ages

FOR SBI/IBPS/RBI/ ALL OTHER BANKING EXAMS

$$3u - P = -1 \dots\dots\dots (ii)$$

Solving equation (i) and (ii)

$$13u - 9u = 21 + 3$$

$$u = 6$$

Required the age of Rohan after 2 years = $4 * 6 + 2 = 26$ years

Quantity II

Let, the age of Priti = u , Priyanka = $2u$, and Pallabi = $2u * 3 = 6u$

Given that,

$$u + 2u + 6u = 108$$

$$u = 12$$

The age of Priti = 12 years, Priyanka = $2 * 12 = 24$ years, and Pallabi = $6 * 12 = 72$ years

The age gap of Pallabi and Priti = $72 - 12 = 60$ years

Required years when Priyanka will be 60 years = $60 - 24 = 36$ years

Quantity III

Let the present age of Albie be ' x ', then the present age of George is $46 - x$

Eleven years ago, the present age of Albie was $x - 11$ and the present age of George would have been $46 - x - 11 = 35 - x$

According to the question, $x - 11 = 3(35 - x)$

$$x - 11 = 105 - 3x$$

$$4x = 116$$

$$x = 29$$

Age of Albie after two years = 31 years

Quantity I < Quantity II > Quantity III

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

- 1) If the ratio of present ages of A, B and C is 3:4:5 respectively and the sum of the present ages of B and C is 108 years. Find the present age of A?
यदि A, B और C की वर्तमान आयु का अनुपात क्रमशः 3:4:5 है और B और C की वर्तमान आयु का योग 108 वर्ष है। A की वर्तमान आयु ज्ञात कीजिये?
a) 36yrs
b) 30yrs
c) 42yrs
d) 36yrs
e) None of these
- 2) If the ratio of the present age of P and Q is 3:4 and that of Q and R is 2:1. If the sum of their ages is 72 years, then find the present age of Q?
यदि P और Q की वर्तमान आयु का अनुपात 3:4 है और Q और R की वर्तमान आयु का अनुपात 2:1 है। यदि उनकी आयु का योग 72 वर्ष है, तो Q की वर्तमान आयु ज्ञात कीजिये?
a) 32 years
b) 30 years
c) 36 years
d) 24 years
e) None of these
- 3) If Sanjay is 6 years older than Vicky and 6 years younger than Lucky. The sum of their present ages is 78 years. Find the youngest one's age?
यदि संजय विकी से 6 वर्ष बड़ा है और लकी से 6 वर्ष छोटा है। उनकी वर्तमान आयु का योग 78 वर्ष है। सबसे छोटे की आयु ज्ञात कीजिये?
a) 26 years
b) 22 years
c) 32 years
d) 20 years
e) None of these
- 4) Eight years ago, the sum of the ages of X and Y is 72 years. If X's age 5 years ago is equal to Y's age 11 years ago. Find the present age of X?
आठ वर्ष पहले, X और Y की आयु का योग 72 वर्ष है। यदि X की आयु 5 वर्ष पहले Y की आयु 11 वर्ष पहले के बराबर है। X की वर्तमान आयु ज्ञात कीजिये?
a) 41 years
b) 37 years
c) 47 years
d) 49 years
e) None of these

47) The questions below consist of a question and may three statements have numbered I, II and III given below it. You have to decide whether the data provided in the statements are satisfied to answer the question.

Read all the statements and answer is 25 years.

Statement I: 5 years ago, the age of A and the age of B, 7 years after is in the ratio of 5: 7. The present age of A is equal to the average present age of B and C together. Then find the age of C, 7 years ago, if the average present age of A, B and C is 30 years?

Statement II: 4 years ago, the age of P and Q is 2: 3. The average present age of P, Q and R is 30 years. Find the age of P, 5 years ago, if the age of R, after 3 years is 20 years?

Statement III: After 3 years, the ratio of age of Q and R is 10: 13. P's present age is the sum of the age of Q and R, 5 years ago. Find the present age of P, if the present age of S is 4 years more than the present age of Q but 2 years less than the present age of R?

नीचे दिए गए प्रश्नों में एक प्रश्न शामिल है और इसके नीचे तीन कथन क्रमांक I, II और III दिए गए हैं। आपको यह तय करना होगा कि कथनों में दिया गया डेटा प्रश्न का उत्तर देने के लिए संतुष्ट है या नहीं।

सभी कथन पढ़ें और उत्तर 25 वर्ष है।

कथन I: 5 वर्ष पहले, A की आयु और 7 वर्ष बाद B की आयु का अनुपात 5:7 है। A की वर्तमान आयु, B और C की औसत वर्तमान आयु के बराबर है। यदि A, B और C की औसत वर्तमान आयु 30 वर्ष है, तो 7 वर्ष पहले C की आयु ज्ञात कीजिए?

कथन II: 4 वर्ष पहले, P और Q की आयु 2:3 थी। P, Q और R की औसत वर्तमान आयु 30 वर्ष है। 5 वर्ष पहले P की आयु ज्ञात कीजिए, यदि 3 वर्ष बाद R की आयु 20 वर्ष है?

कथन III: 3 वर्षों के बाद, Q और R की आयु का अनुपात 10:13 है। P की वर्तमान आयु, 5 वर्ष पहले Q और R की आयु का योग है। P की वर्तमान आयु ज्ञात करें, यदि S की वर्तमान आयु Q की वर्तमान आयु से 4 वर्ष अधिक है लेकिन R की वर्तमान आयु से 2 वर्ष कम है?

- a) Both statements I and II
- b) Both statements I and III
- c) Only statement I
- d) All the three statements
- e) None of these

48) Choose correct option: -

Quantity I- Average of the ages of A, B and C is $(x+8)$ years and the average of the ages of D and B is $(x + 2)$ years. If the difference between the age of A and B is 4 years where age of A < age of B and the ratio of the age of B and C is 5:6, and the age of D is 8. Find the value of x?

Connect with

Kaushik Mohanty on :

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

Quantity II- After 5 years, Sum of the ages of P and Q is x years and the present age of Q is $x/3$ years and the sum of the present ages of P and Q is 32 years and the present age of R is $8/7$ th of the present age of Q. Find the present age of R.

सही विकल्प चुनें:-

मात्रा I- A, B और C की आयु का औसत $(x+8)$ वर्ष है और D और B की आयु का औसत $(x+2)$ वर्ष है। यदि A और B की आयु के बीच का अंतर 4 वर्ष है, जहाँ A की आयु $<$ B की आयु है और B और C की आयु का अनुपात 5:6 है, और D की आयु 8 है। x का मान ज्ञात कीजिए?

मात्रा II- 5 वर्ष के बाद, P और Q की आयु का योग x वर्ष है और Q की वर्तमान आयु $x/3$ वर्ष है और P और Q की वर्तमान आयु का योग 32 वर्ष है और R की वर्तमान आयु है Q की वर्तमान आयु का $8/7$ वाँ भाग। R की वर्तमान आयु ज्ञात कीजिए।

- a) Quantity-I $<$ Quantity-II
- b) Quantity-I $>$ Quantity-II
- c) Quantity-I $\leq$ Quantity-II
- d) Quantity-I = Quantity-II or No relation
- e) Quantity-I $\geq$ Quantity-II

49) In the question, two quantities I and II are given. You have to solve both the quantities to find out the correct relation between Quantity-I and Quantity-II and choose the correct option.

Quantity I: Present ages of Vivek and Vishvaas are in the ratio of 8:5 respectively. Find the present age of Vivek, if the age of Vishvaas after 15 years will be equal to the age of Vivek after 6 years?

Quantity II: Average age of a class of 50 students is 24 years. The average age of the class is increased by six months if the age of the class teacher is also included. Find the age of the class teacher?

प्रश्न में दो मात्राएँ I और II दी गई हैं। मात्रा-I और मात्रा-II के बीच सही संबंध जानने और सही विकल्प चुनने के लिए आपको दोनों मात्राओं को हल करना होगा।

मात्रा I: विवेक और विश्वास की वर्तमान आयु क्रमशः 8:5 के अनुपात में है। विवेक की वर्तमान आयु ज्ञात कीजिए, यदि 15 वर्ष बाद विश्वास की आयु 6 वर्ष बाद विवेक की आयु के बराबर होगी?

मात्रा II: 50 छात्रों की एक कक्षा की औसत आयु 24 वर्ष है। यदि कक्षा शिक्षक की आयु भी शामिल कर ली जाए तो कक्षा की औसत आयु छह महीने बढ़ जाती है। कक्षा अध्यापक की आयु ज्ञात कीजिये?

- a) Quantity-I $<$ Quantity-II
- b) Quantity-I $>$ Quantity-II
- c) Quantity-I $\leq$ Quantity-II
- d) Quantity-I = Quantity-II or No relation
- e) Quantity-I $\geq$ Quantity-II

50) In the question, two quantities I and II are given. You have to solve both the quantities to find out the correct relation between Quantity-I and Quantity-II and choose correct option: -

Quantity I- Ratio of the age of A to B is 5:4 . The ratio of age of B to C is 5:6. The ratio of the age of A after 5 years to the age of C after 16 years is 3:4. Find the difference between the age of B and D, if the age D is 20% more than the age A.

Quantity II- Average age of three members of a family is 42. The average age of the other 4 members of another family is 36. If the oldest people X in the family of three members and another oldest people Y in the family of four members added. Find the difference of the oldest people's age, if the total age difference of the other people (Included oldest member) of the family is 12? ($Y > X$)

प्रश्न में दो मात्राएँ I और II दी गई हैं। आपको मात्रा-I और मात्रा-II के बीच सही संबंध जानने के लिए दोनों मात्राओं को हल करना होगा और सही विकल्प चुनना होगा: -

मात्रा I- A से B की आयु का अनुपात 5:4 है। B से C की आयु का अनुपात 5:6 है। 5 वर्ष के बाद A की आयु का 16 वर्ष के बाद C की आयु से अनुपात 3:4 है। यदि D की आयु A की आयु से 20% अधिक है, तो B और D की आयु के बीच अंतर ज्ञात करें।

मात्रा II- एक परिवार के तीन सदस्यों की औसत आयु 42 है। दूसरे परिवार के अन्य 4 सदस्यों की औसत आयु 36 है। यदि तीन सदस्यों वाले परिवार में सबसे बुजुर्ग लोग X हैं और चार सदस्यों वाले परिवार में सबसे बुजुर्ग लोग Y हैं। जोड़ा गया. यदि परिवार के अन्य लोगों (सबसे बुजुर्ग सदस्य सहित) की कुल उम्र का अंतर 12 है, तो सबसे बुजुर्ग लोगों की उम्र का अंतर ज्ञात करें? (वाई > एक्स)

- a) Quantity-I < Quantity-II
- b) Quantity-I > Quantity-II
- c) Quantity-I $\leq$ Quantity-II
- d) Quantity-I = Quantity-II or No relation
- e) Quantity-I $\geq$ Quantity-II

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

SOLUTION

1) Answer - D

Present Age of A, B and C is $3x$, $4x$ and $5x$ respectively,
ATP,

$$4x + 5x = 108$$

$$9x = 108$$

$$x = 12$$

$$\text{Present Age of A} = 3 \times 12 = 36$$

2) Answer - A

Present age of	P	Q	R
	3	4	
		2	1

6	8	4
---	---	---

Present age of P, Q and R = $3:4:2$

$$\text{Age of Q} = \frac{4}{9} \times 72 = 32$$

3) Answer - D

Present age of Vicky = x

Present age of Sanjay = $x + 6$

Present age of Lucky = $x + 6 + 6 = x + 12$

ATP,

$$3x + 18 = 78$$

$$3x = 78 - 18$$

$$3x = 60$$

$$x = 20$$

4) Answer - A

Present age of X = x

Present age of Y = y

ATP,

$$x - 5 = y - 11$$

$$x = y - 6 \text{ ---- (i)}$$

$$(x - 8) + (y - 8) = 72$$

$$y - 6 + y = 88$$

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

$$2y = 88 + 6$$

$$y = 94/2 = 47$$

$$x = 47 - 6 = 41$$

5) Answer - C

Present age of A = x

Present age of B = 3x

ATP,

$$(x + 3)/(3x + 3) = 11/30$$

$$30x + 90 = 33x + 33$$

$$3x = 57$$

$$x = 19$$

$$\text{Req. sum} = 4x = 4 \times 19 = 76$$

6) Answer - C

Present age of Manoj = 4x

Present age of Dinesh = 3x

ATP,

$$4x - 6 = 3x + 12$$

$$x = 18$$

$$\text{req. sum} = 7 \times 18 = 126$$

7) Answer - B

Present age of M = 2x

Present age of N = x

ATP,

$$3x = 63$$

$$x = 21$$

$$\text{Req. sum after 5 years} = 2 \times 21 + 5 = 47$$

8) Answer - A

$$\text{Present age of Deepali} = 25 \times 9/5 = 45$$

$$\text{Age of her son} = 45 \times 2/5 = 18$$

9) Answer - C

Present age of Sanjay = x

Now,

$$(x - 3) = (x + 6) \times 85/100$$

$$20x - 60 = 17x + 102$$

$$3x = 162$$

$$x = 54$$

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

10) Answer - B

$$\text{Present age of B} = 60 \times 50 / 100 = 30$$

$$\text{Present age of A} = 30 \times 70 / 100 = 21$$

$$\text{Req. average} = (26 + 65) / 2 = 45.5 \text{ years}$$

11) Answer - C

$$\text{The age of 30 Students} = (30 \times 12) = 360 \text{ yrs.}$$

$$\text{Average age of 31 persons} = 12 + 2 = 14 \text{ years}$$

$$\text{Total age of 31 persons} = 31 \times 14 = 434 \text{ yrs.}$$

$$\text{Age of the Class Teacher} = (434 - 360) = 74 \text{ yrs.}$$

12) Answer - D

Let us take Roshni's age be x and Rama's age be y

$$Y = 2x + 28$$

$$Y - 2x = 28 \text{ ---- (1)}$$

$$y + 5 = 3(x + 5) + 10$$

$$y - 3x = 20$$

$$y = 20 + 3x \text{ ---- (2)}$$

$$(1) = (2)$$

$$2x + 28 = 20 + 3x$$

$$x = 8$$

13) Answer - D

The ratio of present age of Kamal and Puneet = $2 : 3$ ($2x, 3x$)

Given,

$$\Rightarrow (2x + 10) / (3x - 7) = (2/1)$$

$$\Rightarrow 2x + 10 = 6x - 14$$

$$\Rightarrow 4x = 24$$

$$\Rightarrow x = 6$$

$$\text{The age of Kamal, 8 years hence} = 2x + 8$$

$$= 20 \text{ years}$$

14) Answer - C

$$\text{Given that, } A = 125/100 \times B$$

$$P = 5/4 \times Q$$

$$P/R = 5/7$$

$$S - R = 8$$

$$P + Q + R + S = 48 \times 4 = 192$$

$$P:Q:R = 5:4:7$$

$$S - 7x = 8$$

Connect with

Kaushik Mohanty on :

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

$$S = 8 + 7x$$

$$5x + 4x + 7x + 8 + 7x = 192$$

$$x = 8$$

Thus,

$$S's \text{ age} = 7 * 8 + 8 = 64 \text{ years}$$

15) Answer - C

$$x + y = 38 \text{---(1)}$$

$$(x+4)/(y+2) = 6/5$$

$$5x + 20 = 6y + 12$$

$$5x - 6y = -8 \text{---(2)}$$

$$(1) * 5 - (2)$$

$$11y = 198$$

$$y = 18$$

$$x = 20$$

$$x:y = 10:9$$

16) Answer - A

Let the present age of Surya is = x years

Then, the present age of Rahul is = $7x$ years

So, 5 years hence.

According to the question,

$$= 5(x + 5) = (7x + 5)$$

$$= 5x + 25 = 7x + 5$$

$$= 7x - 5x = 25 - 5$$

$$= 2x = 20 =$$

$$x = 10$$

So, the present age of the Surya is = 10 years

Thus, the age of Surya 8 years Hence is = $10 + 8 = 18$ years

17) Answer - A

The age of P, 5 years ago and the age of Q, 7 years hence is in the ratio = 5: 6

Present age of P and Q = $5x + 5, 6x - 7$

$$S = Q + 2 = 6x - 7 + 2 = 6x - 5$$

$$R = S - 7 = 6x - 5 - 7 = 6x - 12$$

The average present age of P, Q, R and S = 24 years

$$5x + 5 + 6x - 7 + 6x - 5 + 6x - 12 = 24 * 4$$

$$23x - 19 = 96$$

$$23x = 115$$

$$x = 115/23 = 5$$

The present age of S = $6x - 5 = 25$ years

Connect with

Kaushik Mohanty on :

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

18) Answer – D

The ratio of age of A and B ,5 years ago = 2: 3

The sum of the present age of A, B and C together = 96 years

$$2x + 5 + 3x + 5 + 16 = 96$$

$$5x = 96 - 10 - 16$$

$$5x = 70$$

$$x = 14$$

$$\begin{aligned}\text{The present age of A} &= 2x + 5 \\ &= 33 \text{ years}\end{aligned}$$

$$\begin{aligned}\text{The present age of D} &= A + 6 \\ &= 33 + 6 \\ &= 39 \text{ years}\end{aligned}$$

19) Answer – E

The ratio of age of P, Q and R is=2:3:9

Let ages of P, Q and R be $2x$, $3x$ and $9x$ respectively.

So, we can say,

$$2x+3/9x+3=1/3$$

Or,

$$x=2$$

$$\begin{aligned}\text{Age S} &= 18 \times 4/3 \\ &= 24\end{aligned}$$

$$\begin{aligned}\text{Age Q} &= 3x \\ &= 6\end{aligned}$$

$$\begin{aligned}\text{Required difference} &= 24-6 \\ &= 18\end{aligned}$$

20) Answer – B

The ratio of age of Ram, 3 years ago and the age of Shyam, 5 years hence = 5: 7
($5x$, $7x$)

6 years hence, the ratio of age of Ram and Shyam is in the ratio = 17: 18

According to the question,

$$\Rightarrow (5x + 3 + 6) / (7x + 1) = (17/18)$$

$$\Rightarrow (5x + 9) / (7x + 1) = (17/18)$$

$$\Rightarrow 90x + 162 = 119x + 17$$

$$\Rightarrow 29x = 145$$

$$\Rightarrow x = 5$$

$$\text{Present age of Shyam} = 7x - 5 = 35 - 5 = 30 \text{ years}$$

$$\text{Present age of Charlie} = 30 - 8 = 22 \text{ years}$$

Connect with

Kaushik Mohanty on :

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

21) Answer - C

Let, ages of Sidhu and Monika before four years are $2k$ years and $3k$ years respectively.

$$(2k + 8)/(3k + 8) = 5/7$$

$$\Rightarrow 14k + 56 = 15k + 40$$

$$\Rightarrow 15k - 14k = 56 - 40$$

$$\Rightarrow k = 16$$

$$\begin{aligned}\text{Present age of Sidhu} &= 2 \times 16 + 4 \\ &= 36 \text{ years}\end{aligned}$$

$$\begin{aligned}\text{Present age of Monika} &= 3 \times 16 + 4 \\ &= 52 \text{ years}\end{aligned}$$

$$\text{Sidhu} + \text{Monika} + \text{Kamal} = 32 \times 3$$

$$\Rightarrow 20 + 28 + \text{Kamal} = 96$$

$$\Rightarrow \text{Kamal} = 96 - 88$$

$$\Rightarrow \text{Kamal} = 8$$

$$\begin{aligned}\text{Required difference} &= 36 - 8 \\ &= 28 \text{ years}\end{aligned}$$

22) Answer - C

$$\begin{aligned}P + Q + R + S &= 56 \times 4 \\ &= 224\end{aligned}$$

$$\begin{aligned}Q + R + S &= 49 \times 3 \\ &= 147\end{aligned}$$

$$P + Q = 132$$

$$\begin{aligned}P &= 224 - 147 \\ &= 77 \text{ years}\end{aligned}$$

$$\begin{aligned}Q &= 132 - 77 \\ &= 55 \text{ years}\end{aligned}$$

$$\begin{aligned}R + S &= 224 - (77 + 55) \\ &= 92 \text{ years}\end{aligned}$$

$$\begin{aligned}\text{After 8 years Q's age} &= 55 + 8 \\ &= 63 \text{ years}\end{aligned}$$

$$\begin{aligned}\text{R's age after 8 years} &= (63/3) \times 1 \\ &= 21\end{aligned}$$

$$\begin{aligned}\text{Present age of R} &= 21 - 8 \\ &= 13 \text{ years}\end{aligned}$$

$$\begin{aligned}S &= 92 - 13 \\ &= 79 \text{ years.}\end{aligned}$$

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

23) Answer - D

$$\text{Raju} = 120/100 * \text{Akil}$$

$$\text{Raju}/\text{Ankit} = 6/5$$

$$(\text{Ankit} + 5) = 100/300 * (\text{Madhuri} + 5)$$

$$3\text{Ankit} + 15 = \text{Madhuri} + 5$$

$$3\text{Ankit} + 10 = \text{Madhuri}$$

$$3\text{Ankit} + 10 - 6\text{Ankit}/5 = 37$$

$$15\text{Ankit} + 50 - 6\text{Ankit} = 37 * 5$$

$$\text{Ankit} = 15$$

5 years ago

$$\begin{aligned}\text{Ankit's age} &= 15 - 5 \\ &= 10 \text{ years}\end{aligned}$$

24) Answer - B

Let the age of Father be x

$$\text{So daughter} = 0.5x$$

$$\text{Mother} = x + 6$$

$$\text{Son} = 0.5x - 14$$

ATQ,

$$x + 6 = 3(0.5x - 14)$$

$$x + 6 = 1.5x - 42$$

$$0.5x = 48$$

$$x = 96$$

$$\begin{aligned}\text{Age of son} &= 0.5x - 14 \\ &= 34 \text{ years}\end{aligned}$$

25) Answer - A

Let the age of Param, Raman and Tarun be P, R and T respectively

ATQ,

$$P + 4 = x(R)$$

$$R + 5 = T$$

$$P = 0.5T + 4.5$$

$$R = 12$$

$$\begin{aligned}\text{So } T &= 12 + 5 \\ &= 17\end{aligned}$$

$$\begin{aligned}P &= 8.5 + 4.5 \\ &= 13\end{aligned}$$

So,

$$13 + 4 = x(12)$$

$$x = 17/12$$

26) Answer - D

$$\begin{aligned}\text{Sum of Ages of Ramu , Ravi and Raman} &= (2x+12)*3 \\ &= 6x+36\end{aligned}$$

$$\begin{aligned}\text{Sum of Ages of Ramu and Raman} &= 2(x+16) \\ &= 2x+32\end{aligned}$$

$$\begin{aligned}\text{Age of Ravi} &= (6x+36) - (2x+32) \\ &= 4x + 4\end{aligned}$$

Let the Age of Ravi and Raman be $4a$ and $5a$ respectively.

$$5a - 4a = 9$$

$$a = 9$$

$$\text{Raman} = 45$$

$$\text{Ravi} = 36 = 4x + 4$$

$$X = 8$$

$$\begin{aligned}\text{Age of Ramu} &= 2x + 32 - 45 \\ &= 48 - 45 \\ &= 3 \text{ years}\end{aligned}$$

27) Answer - C

Let the Age of Aman , Bhavana and Charu be A , B and C respectively.

$$(A + B + C)/3 = C + 5$$

$$A + B + C = 3C + 15 \text{ ---- (1)}$$

$$(B + C) * 2/3 = A$$

$$A = (2B + 2C) * 1/3 \text{ ---- (2)}$$

From (1) and (2),

$$(2B + 2C) * 1/3 + B + C = 3C + 15$$

$$2B + 2C + 3B + 3C = 9C + 45$$

$$5B - 4C = 45 \text{ ---- (3)}$$

$$B - C = 6$$

$$B = C + 6 \text{ ---- (4)}$$

$$5 * (C + 6) - 4C = 45$$

$$5C + 30 - 4C = 45$$

$$\text{Charu} = 15 \text{ years}$$

$$\begin{aligned}\text{Bhavana} &= 15 + 6 \\ &= 21 \text{ years}\end{aligned}$$

$$\begin{aligned}\text{Aman} &= (21 + 15) * 2/3 \\ &= 36 * 2/3 \\ &= 24 \text{ years}\end{aligned}$$

$$\begin{aligned}\text{Req ratio} &= 24 : 21 \\ &= 8:7\end{aligned}$$

For SBI/IBPS/RBI/ All other Banking Exams

28) Answer - D

$$\begin{aligned} \text{Ram} + \text{Rahul} + \text{Sanjay} + \text{David} &= 42 * 4 \\ &= 168 \end{aligned}$$

$$\begin{aligned} \text{Rahul} + \text{Sanjay} + \text{David} &= 28 * 3 \\ &= 84 \end{aligned}$$

$$\text{Ram} + \text{Rahul} = 144$$

$$\begin{aligned} \text{Ram} &= 168 - 84 \\ &= 84 \text{ years} \end{aligned}$$

$$\begin{aligned} \text{Rahul} &= 144 - 84 \\ &= 60 \text{ years} \end{aligned}$$

$$\begin{aligned} \text{Sanjay} + \text{David} &= 168 - (84 + 60) \\ &= 24 \text{ years} \end{aligned}$$

$$\begin{aligned} \text{After 10 years Rahul's age} &= 60 + 10 \\ &= 70 \text{ years} \end{aligned}$$

$$\begin{aligned} \text{Sanjay's age after 10 years} &= 70 * 3/70 \\ &= 30 \text{ years} \end{aligned}$$

$$\begin{aligned} \text{Sanjay's Present Age} &= 30 - 10 \\ &= 20 \end{aligned}$$

29) Answer - A

$$(9x + 10)/(5x + 10) = 11/7$$

$$8x = 40$$

$$x = 5$$

$$\text{B's age} = 6 * 5 = 30 \text{ years}$$

$$B * D = 720$$

$$D = 24 \text{ years}$$

$$E = 24 + 10 = 34 \text{ years}$$

$$\text{C's age} = 25 \text{ years}$$

$$\text{Average} = (25 + 34)/2 = 29.5 \text{ years}$$

30) Answer - B

$$5 \text{ years ago, the ratio of age of the Nihal and his Akash} = 7: 2 (7x, 2x)$$

$$8 \text{ years after, the ratio of age of the Nihal and 5 years after, the age of Akash} = 12: 5$$

According to the question,

$$(7x + 13)/(2x + 10) = (12/5)$$

$$35x + 65 = 24x + 120$$

$$11x = 55$$

$$x = 5$$

$$\text{The present age of the Nihal and his Akash} = (7x + 5), (2x + 5) = 40, 15$$

Connect with

Kaushik Mohanty on :

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

The average Present age of the Nihal, Niru, Akash and Anu = 25
Total Present age of the Nihal , Niru, Akash and Anu = $25 * 4 = 100$
Total present age of the Niru and her Anu = $100 - 55 = 45$
Let the present age of Niru and Anu be A and B,
 $A + B = 45 \rightarrow (1)$
 $A - B = 25 \rightarrow (2)$
By solving the equation (1) and (2),
 $A = 35, B = 10$
The present age of Anu = 10 years

31) Answer - C

The ratio of present ages of Aman and Preeti = $7 : 8$ ($7x, 8x$)
The present age of Usha = $7x + 8x = 15x$
According to the question,
 $(7x + 3) / (8x - 6) = 4/3$
 $21x + 9 = 32x - 24$
 $11x = 33$
 $x = 3$
Aman's present age = 21 years
Preeti's present age = 24 years
Present age of Usha = 45 years
Required ratio = $45 : (21 + 4) = 45 : 25 = 9 : 5$

32) Answer - B

M : F = $15 : 16$
Let the Age of mother and father be $15x$ and $16x$ respectively
 $15x + 6 / 16x + 6 = 17/18$
 $270x + 108 = 272x + 102$
 $X = 3$
Age of mother = 45
Age of father = 48
Now,
 $48 - a / 45 - a = 9/8$
 $384 - 8a = 405 - 9a$
 $A = 21$
Rajat's Age = $21 - 4$
 $= 17$

For SBI/IBPS/RBI/ All other Banking Exams

33) Answer - B

Let the age of Ram, Shyam and Murari are $6x$ years, $8x$ years and $5x$ years respectively.

So, the age of Rahul = $(81 - 6x)$ years

And the age of Saurav = $(94 - 8x)$ years

Then, according to the question,

Murari's Brother = $\frac{5}{11} \times (81 - 6x + 94 - 8x)$

= $\frac{5}{11} \times (175 - 14x)$

So, the value of x will be

$\frac{6x}{\frac{5}{11} \times (175 - 14x)} = \frac{6}{5}$

$11x = 175 - 14x$

$25x = 175$

$x = 7$ years

Thus, the sum of the age is = $6x + 8x + 5x$

= $19x$

= 133 years

34) Answer - A

Total age of family = 243 years

Three years later total age of family = $243 + 8 \times 3 - 64 = 203$ years

After another three years total age of family = $203 - 64 + 8 \times 3 = 163$ years

Average age $\approx 163/8 = 20$ years

35) Answer - C

Before Death = $50 \times 16 = 800$

The age of late director at the time of his death $800 - (58 + x) + 38 + 15 = 750$

$X = 45$

36) Answer - A

16 years ago Total age of a family of four members = 180

Sum of the Present age of a family of four members = $180 + (16 \times 4) = 244$

Sum of the Present age of a family of six members = $45 \times 6 = 270$

$x + x + 8 = 26$

$x = 9$

Present age of the older child to the present age of the younger Child = 17:9

37) Answer - A

$M/T = 3/2$

$B + R = 66 - 16 = 50$

$R/S = 2/5$

Connect with

Kaushik Mohanty on :

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

$$(B + 10)/(S + 10) = 2/3$$

$$2S + 20 = 3B + 30$$

$$2S - 3B = 10 \text{ ———(1)}$$

$$T - 10 = B$$

$$B + 2S/5 = 50$$

$$5B + 2S = 250 \text{ ———(2)}$$

$$(2) - (1)$$

$$8B = 240$$

$$B = 30$$

$$T = 30 + 10 = 40$$

$$B + R = 50$$

$$R = 50 - 30 = 20$$

$$2S/5 = 20$$

$$S = 50$$

$$M = 3/2 * 40 = 60$$

$$\text{Required ratio} = (60 + 50):(30 + 40 + 20)/3$$

$$= 110:30$$

$$= 11:3$$

38) Answer – E

Present age ratio of Abhijeet and his sister = 5:2

Present age ratio of mother and daughter = 9:1

Present age ratio of mother, daughter and Abhijeet = 18:2:5

Difference between mother and Abhijeet = 26 years

$$13x = 26 \text{ years}$$

$$x = 2 \text{ years}$$

Present age of mother = 36 years

Abhijeet = 10 years

Abhijeet's sister = 4 years

Let Father's present age = y

$$(y - 7) - (36 - 7) = 10 - 7$$

$$y - 7 - 29 = 3$$

$$y = 39 \text{ years}$$

$$\text{Sum} = 36 + 39 = 75 \text{ years}$$

39) Answer – B

Let the age of A, B and C are 7x years, 6x years and 9x years respectively.

So, the age of A's brother = (81 - 7x) years

And the age of B's brother = (65 - 6x) years

Then, according to the question, $= 7/17 \times (81 - 7x + 65 - 6x)$

Connect with

$$= 7/17 \times (146 - 13x)$$

$$\text{So, the value of } x \text{ will be } = 7x/[7/17 \times (146 - 13x)] = 3/2$$

$$= 34x = 438 - 39x$$

$$= 73x = 438$$

$$= x = 6 \text{ years}$$

$$\text{Thus, the sum of the age is } = 6 \times (7 + 6 + 9) = 6 \times 22 \Rightarrow 132 \text{ years}$$

Hence, the required answer = 132 years.

40) Answer - B

$$Y/(A - 16) = 2/1$$

$$2A - 32 = Y$$

$$Y/A = 6/5$$

$$6A = 5Y$$

$$3Y + 96 = 5Y$$

$$Y = 48$$

Present age of Yash = 48 years

$$A = 5/6 \times 48 = 40$$

Present age of Anika = 40 years

$$S + 18 = 150/100 \times S$$

$$S = 36$$

$$\text{Present age of Ramesh} = 42 \times 3 - 36 - 48 = 42$$

$$\text{Required percentage} = (48 - 36)/(40 + 42) \times 100 = (12/82) \times 100 = 14.63\%$$

41) Answer - A

Let the present age of Parul and Priya = $4x : 5x$

Four years from now the age of Parul and Six years from now the age of Pakhi = $4y : 5y$

Equate Parul in both cases

$$4x = 4y - 4$$

$$X = y - 1, y = x + 1$$

Substitute the value of Y

$$\text{Age of Pakhi} = 5y - 6 \Rightarrow 5(x + 1) - 6 = 5x + 5 - 6 = 5x - 1$$

So present ages of Parul, Priya and Pakhi = $4x : 5x : 5x - 1$

Four years from now the age of Parul is 10 years less than Pihu

$$4x + 4 = E - 10 \Rightarrow E = 4x + 14$$

$$5 \text{ parts of Pihu} = 4x + 14$$

$$1 \text{ parts of Pihu} = 0.8x + 2.8$$

$$4 \text{ parts of Pari} = 3.2x + 11.2$$

Connect with

Kaushik Mohanty on :

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

So present ages of Parul, Priya, Pakhi, Pari and Pihu = $4x : 5x : 5x - 1 : 3.2x + 11.2 : 4x + 14$

Average age of all friends = 43

Total age of all friends = $43 \times 5 = 215$ years

$4x + 5x + 5x - 1 + 3.2x + 11.2 + 4x + 14 = 215$

$21.2x = 190.8$

$x = 9$

Substitute x value in Pari and Pihu

Average age of Pari and Pihu = $7.2 \times 9 + 25.2 / 2 = 45$ years.

42) Answer - A

I) 5:3, 25: 18, 14

Let seven years ago age of Aman and Babita is $5x$ and $3x$

$5x + 7 - 3x - 7 = 14$

Or, $2x = 14$

$x = 7$

Eight years hence ratio of age is = $5 \times 7 + 7 + 8 : 3 \times 7 + 7 + 8 = 50 : 36 = 25 : 18$

So, it is true.

II) 4:5, 7: 8, 5

Let seven years ago age of Aman and Babita is $4x$ and $5x$

$5x + 7 - 4x - 7 = 5$

Or, $x = 5$

Eight years hence ratio of age is = $4 \times 5 + 7 + 8 : 5 \times 5 + 7 + 8 = 35 : 40 = 7 : 8$

So, it is true.

III) 7:9, 6:7, 6

Let seven years ago age of Aman and Babita is $7x$ and $9x$

$9x + 7 - 7x - 7 = 6$

Or, $x = 3$

Eight years hence ratio of age is = $7 \times 3 + 7 + 8 : 9 \times 3 + 7 + 8 = 36 : 42 = 6 : 7$

So, it is true.

43) Answer - D

I. $(9x + 4) / (8x + 4) = 10/9$

$x = 4$

Present age of Shyam's father = $9 \times 4 = 36$

Present age of Shyam's Mother = $8 \times 4 = 32$

Sum of the age of the family = $22 \times 4 = 88$

Age of Shyam = $(88 - 36 - 32) \times 2 / 5 = 8$

II. $(10x + 4) / (9x + 4) = 11/10$

$x = 4$

Connect with

Kaushik Mohanty on :

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

Present age of Shyam's father = $10 \times 4 = 40$

Present age of Shyam's Mother = $9 \times 4 = 36$

Sum of the age of the family = $25 \times 4 = 100$

Age of Shyam = $(100 - 36 - 40) \times 3 / 8 = 9$

III. $(11x + 4) / (10x + 4) = 12/11$

$x = -8$

x is not negative.

Hence Only I and II

44) Answer - B

From statement I,

Ratio of age of Ramu to Doll = $4x:5x$

The difference of Suman and Ramu is 6.

From Statement II,

Age of Meenu is either 16 or 25.

From Statement III,

Age of Doll is 25

The sum of the ages of Ramu and Suman is 40.

From I and III

Age of Ramu = $30 \times 4 / 5 = 24$

So, Age of Suman = $40 - 24 = 16$ years

45) Answer - B

From I

$Z + Y + 12 = 40 \times 2$

$Z + Y = 68$ (1)

Also, ratio of present age of Hemalata to Kanishak after 13 years is 32:19

If age of Kanishak after 13 years = 19

Present age of Kanishak = $19 - 13 = 6$ years

So, at that time age of Hemalata = 32 years

Present age of Arun = $68 - 32 = 36$ years.

If age of Kanishak after 13 years = 38 years

Present age of Kanishak = $38 - 13 = 25$ years

Present age of Hemalata = 64 years

Present age of Abhishek = $68 - 64 = 4$ years (not possible)

So, age of Hemalata = 32 years

Age of Abhishek = 36 years

Required ratio = $36:32 = 9:8$

This statement alone is sufficient to answer the question.

Connect with

Kaushik Mohanty on :

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

Statement II.

$$Z - 6 = 5/2 \times (M + 6)$$

$$2Z - 12 = 5M + 30$$

$$2Z - 5M = 42 \dots\dots\dots (1)$$

Also,

$$Z + Y + M + 6 = 3 \times 80/3$$

$$Z + Y + M = 74 \dots\dots\dots (2)$$

We need Z and Y, so eliminate M, On solving both equations, we get

$$7Z + 5Y = 412$$

$$Y = (412 - 7Z)/5$$

7Z must contains unit digit 2, when 7 multiply 6 gives 2-unit digit

$$\text{Also, } 2Z > 42$$

$$Z > 21$$

So, if $Z = 26$, $Y = 46$ (not possible)

$$\text{If } Z = 36, Y = 32$$

$$\text{Then } M = 6$$

$$\text{If } Z = 46, Y = 18$$

So, we can't find the exact ages.

So, this statement alone is not sufficient to answer the question.

So Only I is sufficient to answer the question. Hence the answer is option B.

46) Answer - B

From statement I,

Let, age of Neha and Nanu is $3x$ and $5x$ respectively.

$$\text{Age of Neena} = 5x - 5$$

Statement I alone is not sufficient

From statement II,

$$\text{Neha} + 5 = \text{Neena} \Rightarrow \text{Neha} = \text{Neena} - 5$$

$$\text{Namrita} = \text{Nanu} - 1$$

$$\text{Neena} = \text{Namrita} - 4$$

$$\text{Neena} = \text{Nanu} - 1 - 4$$

$$\text{Then Nanu} = A + 5$$

$$(\text{Neha} + 3)/(\text{Nanu} + 2) = 2/3$$

$$\text{So, } (\text{Neena} - 5 + 3)/(\text{Neena} + 5 + 2) = 2/3$$

$$\text{Hence Neena} = 20 \text{ years}$$

So, the data in statement II alone is sufficient to answer the question.

Connect with

Kaushik Mohanty on :

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

47) Answer – A

Statement I:

5 years ago, the age of A and the age of B, 7 years after is in the ratio = 5: 7 ($5x$, $7x$)

The present age of A and B = $5x + 5$, $7x - 7$

The present age of A = The average present age of B and C together

$$5x + 5 = (7x - 7 + C)/2$$

$$10x + 10 - 7x + 7 = C$$

The present age of C = $3x + 17$

The average present age of A, B and C = 30 years

Given,

$$5x + 5 + 7x - 7 + 3x + 17 = 90$$

$$15x + 15 = 90$$

$$15x = 75$$

$$x = 5$$

The age of C, 7 years ago = $3x + 17 - 7 = 15 + 10 = 25$ years

Statement II:

4 years ago, the age of P and Q = 2 : 3 ($2x$, $3x$)

The present age of P and Q = $2x + 4$, $3x + 4$

The average present age of P, Q and R = 30 years

Given,

$$2x + 4 + 3x + 4 + 17 = 90$$

$$5x + 25 = 90$$

$$5x = 65$$

$$x = 13$$

The age of P, 5 years ago = $2x - 1 = 25$ years

Statement III:

After 3 years, the ratio of age of Q and R = 10: 13 ($10x$, $13x$)

A's present age = Sum of the age of Q and R, 5 years ago

$$\Rightarrow (10x + 13x - 6 - 10) = 23x - 16$$

Given,

$$10x - 3 + 4 = 13x - 3 - 2$$

$$10x + 1 = 13x - 5$$

$$6 = 3x$$

$$x = 2$$

The present age of P = $23x - 16 = 46 - 16 = 30$ years

Only statements I and II satisfy the value given in the question.

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

48) Answer – B

Quantity I-

$$A+B+C = 3*(x+8)=3x + 24$$

$$B+D = 2x+4$$

$$D=8$$

$$B=2x + 4 - 8 = 2x - 4$$

$$B - A = 4$$

$$A = B - 4 = 2x - 4 - 4 = 2x - 8$$

$$C = 3x + 24 - A - B = 3x + 24 - 2x + 8 - 2x + 4 = 36 - x$$

$$B:C = 5:6$$

$$2x - 4 / 36 - x = 5/6$$

$$17x = 204$$

$$X=12$$

Quantity II-

$$\text{Present age of Q} = x/3$$

$$P + Q = 32$$

$$P + Q = x - 10$$

$$32 = x - 10$$

$$x = 42 \text{ years}$$

$$\text{Present age of Q} = 42/3 = 14 \text{ years}$$

$$\text{Present age of R} = 14 * 8/7 = 16 \text{ years}$$

$$QI < QII$$

49) Answer – A

Quantity I:

Let the present ages of Vivek and Vishvaas be $8x$ years and $5x$ years respectively.

According to the question,

$$8x + 6 = 5x + 15$$

$$3x = 9$$

$$x = 3$$

$$\text{So, the present age of Vivek} = 8 \times 3 = 24 \text{ years}$$

Quantity II:

$$\text{Sum of the ages of all the students in the class} = 50 \times 24 = 1200 \text{ years}$$

$$\text{Sum of the ages of all the students along with class teacher} = 51 \times 24.5 = 1249.5 \text{ years}$$

$$\text{So the age of the class teacher} = 1249.5 - 1200 = 49.5 \text{ years}$$

So, Quantity I < Quantity II.

Top 50 Problem on Ages

For SBI/IBPS/RBI/ All other Banking Exams

50) Answer – B

Quantity I-

The ratio of age of A, B and C is=25:20:24

So, we can say,

$$25x+5/24x+16=3/4$$

Or, $x=1$

$$\text{Age D} = 25 \times 120 / 100 = 30$$

$$\text{Required difference} = 30 - 20 = 10$$

Quantity II-

$$\text{Total age of 3 members family} = 42 \times 3 = 126 \text{ years}$$

$$\text{Total age of 4 members family} = 36 \times 4 = 144 \text{ years}$$

Let the oldest member age of the 1st family is X and 2nd family is Y.

$$\text{So, } 144 + Y - 126 - X = 12$$

$$\text{Or, } Y - X = 6 \text{ years}$$

QI > QII

- e) None of these

21) In a group of 4 friends, ratio of present age of A and D is 3:4 and that B to C is 2:3. Calculate the present average age of A, B and C, if 4 years ago, A was 30 years younger than C and at present C is twice of age of A.

4 दोस्तों के समूह में, A और D की वर्तमान आयु का अनुपात 3:4 है और B से C की वर्तमान आयु का अनुपात 2:3 है। A, B और C की वर्तमान औसत आयु की गणना करें, यदि 4 वर्ष पहले, A, C से 30 वर्ष छोटा था और वर्तमान में C, A की आयु का दोगुना है।

- a) 20.33 years
- b) 25.33 years
- c) 53.33 years
- d) 33.33 years
- e) 43.33 years

22) Ratio of age of Vijay to age of Rony 3:2 and average age of Rony, Vijay and Rahul is 30. When Ajay joins the group, average age of these 4 persons is 35 years. Calculate sum of age Ajay and Rahul, if Rahul is 10 years older than Vijay?

विजय की आयु का रोनी की आयु से अनुपात 3:2 है और रोनी, विजय और राहुल की औसत आयु 30 है। जब अजय समूह में शामिल होता है, तो इन 4 व्यक्तियों की औसत आयु 35 वर्ष है। यदि राहुल, विजय से 10 वर्ष बड़ा है तो अजय और राहुल की आयु का योग ज्ञात कीजिए?

- a) 40 years
- b) 50 years
- c) 90 years
- d) None of these
- e) 60 years

23) Four years ago, Ratio of Ria's to Sia's age is 7:9 and Sia's age four years ago is same as Ria's present age. If Ritu's present age is average of present age of Ria and Sia, then find Ritu's age 4 year hence.

- 60) Rakhi's age is 112.5% of what it was 4 years ago, but 90% of what it will be after 4 years. What is her present age?
राखी की उम्र 4 साल पहले की उम्र का 112.5% है, लेकिन 4 साल बाद यह 90% हो जाएगी।
उसकी वर्तमान आयु क्या है?
- a) 12 years
 - b) 36 years
 - c) 42 years
 - d) 30 years
 - e) Cannot be determined
- 61) Three years ago, $\frac{6}{5}$ of Vedanth and $\frac{4}{3}$ of Chintu is 3:4. 2 years hence, their ratio will be 6:7. Then what will be 25% sum of present ages of both?
तीन साल पहले, वेदांत का $\frac{6}{5}$ और चिंटू का $\frac{4}{3}$ 3:4 है। 2 वर्ष बाद, उनका अनुपात 6:7 होगा।
तो दोनों की वर्तमान आयु का योग 25% क्या होगा?
- a) 16.25 years
 - b) 17 years
 - c) 19.5 years
 - d) 15.25 years
 - e) None of these
- 62) The respective ratio between the present age of Ramesh, Rohan and Rajesh is 2:5:7. If the average of their present age is 28 years, then what would be the sum of the ages of Ramesh and Rohan together after 5 years?
रमेश, रोहन और राजेश की वर्तमान आयु के बीच संबंधित अनुपात 2:5:7 है। यदि उनकी वर्तमान आयु का औसत 28 वर्ष है, तो 5 वर्ष बाद रमेश और रोहन की कुल आयु का योग क्या होगा?
- a) 45 years
 - b) 55 years
 - c) 59 years
 - d) 52 years
 - e) None of these
- 63) Farhan was married 6 years ago, today his age is $\frac{6}{5}$ times to that at the time of marriage. At present, his daughter's age is $\frac{1}{4}$ th of his age. What was his daughter's age 6 years ago?

फरहान की शादी 6 साल पहले हुई थी, आज उनकी उम्र शादी के वक्त की उम्र से $\frac{6}{5}$ गुना है।
वर्तमान में उनकी बेटी की उम्र उनकी उम्र की एक चौथाई है। 6 वर्ष पहले उसकी बेटी की उम्र क्या थी?

- a) 6 years
- b) 7 years
- c) 3 years
- d) Cannot be determined
- e) None of these

64) Suraj got married 4 years ago. His age is $\frac{7}{6}$ times of his age at the time of his marriage. Seven years ago, his son was 7 years old. The ratio of their (Suraj & his son) present age?

सूरज की शादी 4 साल पहले हुई थी। उसकी उम्र उसकी शादी के समय की उम्र से $\frac{7}{6}$ गुना है। सात साल पहले उनका बेटा 7 साल का था। उनकी (सूरज और उसके बेटे की) वर्तमान आयु का अनुपात क्या है?

- a) 1 : 4
- b) 7 : 1
- c) 2 : 1
- d) 4 : 1
- e) 8 : 1

65) Mayank's age is $\frac{3}{2}$ of his brother's age and the age of Mayank's father is 44 years more than the age of Mayank. If the average age of Mayank, Mayank's father and Mayank's brother is 45 years, find the age of Mayank.

मयंक की उम्र उसके भाई की उम्र की $\frac{3}{2}$ है और मयंक के पिता की उम्र मयंक की उम्र से 44 वर्ष अधिक है। यदि मयंक, मयंक के पिता और मयंक के भाई की औसत आयु 45 वर्ष है, तो मयंक की आयु ज्ञात कीजिए।

- a) 28 years
- b) 26 years
- c) 20 years
- d) 25 years
- e) None of these

66) Shyam's age is $\frac{1}{9}$ th of his father's age. Shyam's father, Vijay's age will be twice the age of Rani's age after 10 years. If Rani's 19th birthday was celebrated three years before, then what is Shyam's present age.

श्याम की उम्र उसके पिता की उम्र का $\frac{1}{9}$ वां हिस्सा है। श्याम के पिता, विजय की उम्र 10 साल बाद रानी की उम्र से दोगुनी होगी। यदि रानी का 19वां जन्मदिन तीन वर्ष पहले मनाया गया था, तो श्याम की वर्तमान आयु क्या है?

Top 100 Problem On Ages

- a) 5 years
- b) 6 years
- c) 8 years
- d) 5 years
- e) None of these

67) Difference between the ages of Aryan and Ramesh is same as the difference between the ages of Ramesh and Karan. The difference between the ages of Aryan and Karan is 6 years ($\text{Aryan} > \text{Karan}$). If their sum of ages 81, then what are the ratio of ages of Aryan, Ramesh and Karan?

आर्यन और रमेश की उम्र के बीच का अंतर रमेश और करण की उम्र के बीच के अंतर के समान है। आर्यन और करण की उम्र के बीच का अंतर 6 वर्ष है ($\text{आर्यन} > \text{करण}$)। यदि उनकी आयु का योग 81 है, तो आर्यन, रमेश और करण की आयु का अनुपात क्या है?

- a) 8:9:10
- b) 5:6:7
- c) 3:4:5
- d) 10:9:8
- e) None of these

68) The ratio of present ages of Dinesh to Ashish is 5:8 and present age of Imran is equal to the average ages of Dinesh and Ashish after 1 year. If the ratio of present age of Imran and age of Ashish four years ago is 10:11 then what will be the ratio of age of Dinesh after five years to that of present age of Imran?

दिनेश और आशीष की वर्तमान आयु का अनुपात 5:8 है और इमरान की वर्तमान आयु 1 वर्ष के बाद दिनेश और आशीष की औसत आयु के बराबर है। यदि इमरान की वर्तमान आयु और आशीष की चार वर्ष पहले की आयु का अनुपात 10:11 है तो पांच वर्ष बाद दिनेश की आयु और इमरान की वर्तमान आयु का अनुपात क्या होगा?

- a) 13:14
- b) 14:13
- c) 8:7
- d) 7:8
- e) None of these

69) In a family, a couple has a son and daughter. The age of the father is four times that of his daughter and the age of the son is half of his mother. The wife is 16 years younger to her husband and the brother is four years older than his sister. What is the age of the mother?

Top 100 Problem On Ages

एक परिवार में, एक जोड़े का एक बेटा और बेटी है। पिता की उम्र उसकी बेटी की उम्र की चार गुना है और बेटे की उम्र उसकी माँ की उम्र की आधी है। पत्नी अपने पति से 16 साल छोटी है और भाई अपनी बहन से चार साल बड़ा है। माँ की उम्र क्या है?

- a) 30 years
- b) 35 years
- c) 32 years
- d) 40 years
- e) 34 years

- 70) The average age of Mahesh and Rishi at the time of their marriage was 24 years. A son was born to them three years after their marriage. The present average age of all the three of them is 22 years. How many years is it since the couple got married?

विवाह के समय महेश और ऋषि की औसत आयु 24 वर्ष थी। शादी के तीन साल बाद उनके घर एक बेटे का जन्म हुआ। इन तीनों की वर्तमान औसत आयु 22 वर्ष है। जोड़े की शादी को कितने साल हो गए हैं?

- a) 5 years
- b) 6 years
- c) 7 years
- d) 4 years
- e) 9 years

- 71) If the ages of A and C are added to twice the age of B, the total becomes 54. If the ages of B and C are added to thrice the age of A, the total becomes 84 and if the age of A is added to thrice the age of B and thrice the age of C, the total becomes 132. What is the age of A?

यदि A और C की आयु को B की आयु के दोगुने में जोड़ दिया जाए, तो कुल योग 54 हो जाता है। यदि B और C की आयु को A की आयु के तीन गुना में जोड़ दिया जाए, तो कुल 84 हो जाता है और यदि A की आयु है B की आयु का तीन गुना और C की आयु का तीन गुना जोड़ने पर, कुल 132 हो जाता है। A की आयु क्या है?

- a) 19 years
- b) 15 years
- c) 17 years
- d) 12 years
- e) None of these

- 72) The ages of the members of a joint family of eight people added up to 241 years. Three years later, one member died at the age of 80 years and a child was born at the same time when person was died. After another three years, one more member died, again at 80, and a child was born at the same time when person

was died. The current average age of this eight-member joint family is nearest to?

आठ लोगों के संयुक्त परिवार के सदस्यों की आयु जोड़ने पर 241 वर्ष होती है। तीन साल बाद, एक सदस्य की 80 वर्ष की आयु में मृत्यु हो गई और उसी समय एक बच्चे का जन्म हुआ जब व्यक्ति की मृत्यु हुई थी। अगले तीन वर्षों के बाद, एक और सदस्य की मृत्यु हो गई, फिर से 80 वर्ष की आयु में, और उसी समय एक बच्चे का जन्म हुआ जब व्यक्ति की मृत्यु हुई थी। इस आठ सदस्यीय संयुक्त परिवार की वर्तमान औसत आयु किसके निकटतम है?

- a) 12 years
- b) 16 years
- c) 10 years
- d) 13 years
- e) 14 years

- 73) The average age of board of directors of a company having 12 directors was 52 years. When a director aged 54 resigned from the board of directors another director died on the same day. A new director joined board of directors aged 36. Next year the average age of all 11 directors was found to be 52 years. The age of late director at the time of his death was?

12 निदेशकों वाली कंपनी के निदेशक मंडल की औसत आयु 52 वर्ष थी। जब 54 वर्ष की आयु के एक निदेशक ने निदेशक मंडल से इस्तीफा दिया तो उसी दिन दूसरे निदेशक की मृत्यु हो गई। एक नया निदेशक 36 वर्ष की आयु में निदेशक मंडल में शामिल हुआ। अगले वर्ष सभी 11 निदेशकों की औसत आयु 52 वर्ष पाई गई। दिवंगत निर्देशक की मृत्यु के समय उनकी उम्र कितनी थी?

- a) 48 years
- b) 42 years
- c) 45 years
- d) 40 years
- e) None of these

- 74) 10 years ago the average age of a family of four members was 35 years. Two children were born in this span of 10 years. The present average of the family remains unchanged. Among the two children who were born during the 10 years, if the older child at present is 2 years older than the younger one, what is the ratio of the present age of the older child to the present age of the younger Child?

10 वर्ष पहले चार सदस्यों वाले एक परिवार की औसत आयु 35 वर्ष थी। 10 साल की इस अवधि में दो बच्चों का जन्म हुआ। परिवार का वर्तमान औसत अपरिवर्तित रहता है। 10 वर्षों के दौरान

पैदा हुए दो बच्चों में से, यदि वर्तमान में बड़ा बच्चा छोटे बच्चे से 2 वर्ष बड़ा है, तो बड़े बच्चे की वर्तमान आयु का छोटे बच्चे की वर्तमान आयु से अनुपात क्या है?

- a) 9:4
- b) 7:3
- c) 7:6
- d) 8:7
- e) 9:5

75) Mr. Sunil is 4 times more aged than his son. If after 10 years, he would be 3 times of son's age, then further after 20 years, how many times he would be of his son's age?

श्री सुनील की उम्र उनके बेटे से 4 गुना अधिक है। यदि 10 वर्ष बाद, वह अपने बेटे की उम्र का 3 गुना होगा, तो 20 साल बाद, वह अपने बेटे की उम्र का कितना गुना होगा?

- a) 4 times
- b) 2 times
- c) 7 times
- d) $13/3$ times
- e) 8 times

76) A and B's present age ratio is 5:9. If A's age 5 years ago and B's age 4 years ago is in the ratio 1:2 respectively. A is ____ years old 7 years ago and B is ____ years old after 6 years.

A और B की वर्तमान आयु का अनुपात 5:9 है। यदि A की आयु 5 वर्ष पहले और B की आयु 4 वर्ष पहले की आयु क्रमशः 1:2 के अनुपात में है। A 7 वर्ष पहले ____ वर्ष का था और B 6 वर्ष बाद ____ वर्ष का था।

- a) 36, 36
- b) 43, 31
- c) 23, 60
- d) 36, 32
- e) None of these

77) Ratio of the ages of Minu and Tinu is 4:5 and the sum of the ages of Binu and Rinu after 2 years is 60 years. If the ratio of the ages of Rinu and Sinu is 8:7 and the ratio of the ages of Binu and Sinu after 10 years is 17:19. 10 years ago Tinu's age is 62.5% of the present age of Binu. What is the ratio of the sum of the present

ages Minu and Sinu together to average of the present ages of Tinu, Binu and Rinu together?

मीनू और टीनू की आयु का अनुपात 4:5 है और 2 वर्ष के बाद बीनू और रीनू की आयु का योग 60 वर्ष है। यदि रिनु और सिनु की आयु का अनुपात 8:7 है और 10 वर्ष के बाद बीनू और सिनु की आयु का अनुपात 17:19 है। 10 वर्ष पहले टीनू की उम्र बीनू की वर्तमान उम्र का 62.5% थी। मीनू और सिनू की वर्तमान आयु के योग का टीनू, बीनू और रीनू की कुल वर्तमान आयु के औसत से अनुपात क्या है?

- a) 5: 2
- b) 16:9
- c) 11: 3
- d) 13: 6
- e) None of these

78) The present average age of a group of 50 athletes is 50% more than the average age of the 50 athletes 4 years ago. The average age of the group will become Y, if two new athletes of 24 year and 32 years join the group. Find the value of Y.
50 एथलीटों के एक समूह की वर्तमान औसत आयु 4 वर्ष पहले के 50 एथलीटों की औसत आयु से 50% अधिक है। यदि 24 वर्ष और 32 वर्ष के दो नए एथलीट समूह में शामिल होते हैं, तो समूह की औसत आयु Y हो जाएगी। Y का मान ज्ञात कीजिये।

- a) 14.44
- b) 17.54
- c) 15.48
- d) 16
- e) None of these

79) The ratio of the present age of Komal and the present age of Priya is 5:7, respectively and the ratio of the present age of Priya and the present age of Rahul are 5:7 respectively. After 15 years, Rahul dies and at that time the age of Komal becomes the $\frac{4}{5}$ of the age of Priya. Find the age of Rahul at the time of his death.
कोमल की वर्तमान आयु और प्रिया की वर्तमान आयु का अनुपात क्रमशः 5:7 है और प्रिया की वर्तमान आयु और राहुल की वर्तमान आयु का अनुपात क्रमशः 5:7 है। 15 साल बाद, राहुल की मृत्यु हो जाती है और उस समय कोमल की उम्र प्रिया की उम्र का $\frac{4}{5}$ हो जाती है। मृत्यु के समय राहुल की आयु ज्ञात कीजिये।

- a) 91 years
- b) 75 years

80) 6 years ago, the ratio of the ages of Ganesh and Kartik was 3 : 5, respectively. After 6 years, the ratio of the ages of Kartik and Ganesh would be 9 : 13 respectively. By how many years is Kartik older than Ganesh?

6 वर्ष पहले, गणेश और कार्तिक की आयु का अनुपात क्रमशः 3: 5 था। 6 वर्ष बाद, कार्तिक और गणेश की आयु का अनुपात क्रमशः 9:13 होगा। कार्तिक, गणेश से कितने वर्ष बड़ा है?

- a) 13
- b) 15
- c) 19
- d) 16
- e) None of these

81) The ratio of the present age of Rathish to the age of Miklan 15 years ago is 4: 3 and the age of Sharmila after 9 years is 33.33% more than her present age. If the ratio of ages of Rathish to Miklan is 8: 11 and the average age of Rathish, Sharmila and Shalini is 30 years. Find the difference between the present ages of Rathish and Shalini is what percentage of the sum of the present ages of Sharmila and Miklan together.

रथीश की वर्तमान आयु का 15 वर्ष पहले मिकलान की आयु से अनुपात 4:3 है और 9 वर्ष बाद शर्मिला की आयु उसकी वर्तमान आयु से 33.33% अधिक है। यदि रथीश और मिकलान की आयु का अनुपात 8:11 है और रथीश, शर्मिला और शालिनी की औसत आयु 30 वर्ष है। रथीश और शालिनी की वर्तमान आयु के बीच का अंतर ज्ञात कीजिए जो शर्मिला और मिकलान की वर्तमान आयु के योग का कितना प्रतिशत है?

- a) 12.5%
- b) 75%
- c) 30%
- d) 25%
- e) 20%

82) The average age of the family consisting of A, C, and D is 39 years, and two years later, A married B, so the average age of the family decreased by 2 years. After three more years, a new baby is born for A and B, and the average age of the family at the time of baby turns 'x' years is equal to the average age of the family at the time of A's marriage (including B's age). The age of B is three years less than the age of A, and the ratio of the age of C to D at A's marriage is 10: 9. Find the age of A, x years before his marriage.

86) What is the age of A?

Statement I: Ratio of the present age of B and C is 3:5. E is 6 years younger than D who is 4 years older than A. C is 5 years older than A.

Statement II: Ratio of age of B after 3 years and age of C after 2 years is 2:3. Age of B after 5 years is equal to the present age of A. A is 4 years younger than D who is 1 year younger than C.

A की उम्र क्या है?

कथन I: B और C की वर्तमान आयु का अनुपात 3:5 है। E, D से 6 वर्ष छोटा है जो A से 4 वर्ष बड़ा है। C, A से 5 वर्ष बड़ा है।

कथन II: 3 वर्ष के बाद B की आयु और 2 वर्ष के बाद C की आयु का अनुपात 2:3 है। 5 वर्ष बाद B की आयु A की वर्तमान आयु के बराबर है। A, D से 4 वर्ष छोटा है जो C से 1 वर्ष छोटा है।

- a) The data in statement I alone is sufficient to answer the question, while the data in statement II alone is not sufficient to answer the question
- b) The data in statement II alone is sufficient to answer the question, while the data in statement I alone is not sufficient to answer the question
- c) The data either in statement I alone or in statement II alone is sufficient to answer the question
- d) The data given in both statements I and II together are not sufficient to answer the question
- e) The data given in both statements I and II together are necessary to answer the question.

87) What is the present age of X?

Statement I: Z is the younger sister of X, who is 6 years younger than Y who is X's elder brother.

Statement II: P is the mother of Y and was 30 years old when Z was born. The sum of the ages of Y and Z is 24 years.

Statement III: Y is 8 years elder to Z.

X की वर्तमान आयु क्या है?

कथन I: Z, X की छोटी बहन है, जो Y से 6 वर्ष छोटी है, जो X का बड़ा भाई है।

कथन II: P, Y की माँ है और Z के जन्म के समय उसकी उम्र 30 वर्ष थी। Y और Z की आयु का योग 24 वर्ष है।

कथन III: Y, Z से 8 वर्ष बड़ा है।

- d) All three statements together are required to answer the question.
- e) All three statements together are not sufficient to answer the question.

88) What is the present age of Anit?

Statement I: Ratio of the age of Aman to Akash is 3:5. The difference between the age of Anit and Aman after 5 years is 1.

Statement II: The age of Manju is a perfect square between 12 to 26. Manju is 2 years older than Anit.

Statement III: The age of Akash is 25 and sum of the age of Aman and Anit is 29 years old.

अनित की वर्तमान आयु क्या है?

कथन I: अमन और आकाश की आयु का अनुपात 3:5 है। 5 वर्ष बाद अनित और अमन की उम्र के बीच का अंतर 1 है।

कथन II: मंजू की आयु 12 से 26 के बीच एक पूर्ण वर्ग है। मंजू अनित से 2 वर्ष बड़ी है।

कथन III: आकाश की उम्र 25 वर्ष है और अमन और अनित की उम्र का योग 29 वर्ष है।

- a) Both II and III are sufficient
- b) Both I and III are sufficient
- c) only I is sufficient
- d) only II is sufficient
- e) only III is sufficient

89) If the average age of four persons is 26 years, then find the present age of Ankit.

Statement I: The average present age of Ankit and Krish together is 10 years more than the present age of Anjan.

Statement II: The age of Rohit is four years older than Anjan and the present average age of four persons is equal to the age of Rohit after 2 years.

Statement III: The difference between the sum of the present age of Ankit and Rohit together and the present age of Anjan is equal to the present age of Krish.

यदि चार व्यक्तियों की औसत आयु 26 वर्ष है, तो अंकित की वर्तमान आयु ज्ञात कीजिए।

कथन I: अंकित और कृष की औसत वर्तमान आयु अंजन की वर्तमान आयु से 10 वर्ष अधिक है।

कथन II: रोहित की आयु अंजन से चार वर्ष अधिक है और चार व्यक्तियों की वर्तमान औसत आयु 2 वर्ष बाद रोहित की आयु के बराबर है।

कथन III: अंकित और रोहित की वर्तमान आयु और अंजन की वर्तमान आयु के योग के बीच का अंतर कृष की वर्तमान आयु के बराबर है।

- a) The data given in either statements I and II together or statements I and III together are sufficient
- b) The data given in statements I, II and III together is not sufficient
- c) The data given in any of the two statements together is sufficient
- d) The data given in statements I, II and III together is necessary
- e) The data given in statements II and III together are sufficient while statement I alone is not sufficient

90) If the age of Sumit is 5 years older than the present age of Ankita and the present age of Vimal is equal to the average age of Ankita and Sangita, find the average age of five people together.

Statement I: The ratio between the age of Sumit after five years and the present age of Sangita is 2: 1.

Statement II: After 5 years, the age of Sumit is double the age of Ranjana at that time.

Statement III: The present age of Ranjana is equal to the age of Ankita at the time of Ranjana's birth.

यदि सुमित की आयु अंकिता की वर्तमान आयु से 5 वर्ष अधिक है और विमल की वर्तमान आयु अंकिता और संगीता की औसत आयु के बराबर है, तो पांच लोगों की औसत आयु ज्ञात करें।

कथन I: पांच वर्ष बाद सुमित की आयु और संगीता की वर्तमान आयु के बीच का अनुपात 2:1 है।

कथन II: 5 वर्ष बाद, सुमित की उम्र उस समय रंजना की उम्र से दोगुनी है।

कथन III: रंजना की वर्तमान आयु रंजना के जन्म के समय अंकिता की आयु के बराबर है।

- a) The data given in either statements I and II together or statements I and III together are sufficient
- b) The data given in statements I, II and III together are not sufficient
- c) The data given in any of the two statements together are sufficient
- d) The data given in all three statements together are necessary

e) The data given in statements II and III together are sufficient while statement I alone is not sufficient

91) Santosh is the father of Gourav, Sourav and Kavita. Kavita is the younger sister of Gourav who is the elder brother of Sourav. Sourav is 3 years younger than Gourav. Find the present age of Kavita.

Statement I: Babli's (who is the wife of Santosh) age is 25 when Gourav was born.

Statement II: The sum of the age of Sourav and Kavita is 45 years.

Statement III: Santosh's age is 27 when Gourav was born and Gourav is 6 years older than Kavita.

संतोष गौरव, सौरव और कविता के पिता हैं। कविता गौरव की छोटी बहन है जो सौरव का बड़ा भाई है। सौरव, गौरव से 3 वर्ष छोटा है। कविता की वर्तमान आयु ज्ञात कीजिये।

कथन I: गौरव के जन्म के समय बबली (जो संतोष की पत्नी है) की उम्र 25 वर्ष थी।

कथन II: सौरव और कविता की आयु का योग 45 वर्ष है।

कथन III: गौरव के जन्म के समय संतोष की उम्र 27 वर्ष थी और गौरव कविता से 6 वर्ष बड़ा है।

a) Statement II and III together are sufficient.

b) Either statement I alone is sufficient or statement II and III together are sufficient.

c) Either statement III alone is sufficient or statement I and II together are sufficient.

d) All the statements are necessary

e) All the statements together are not sufficient

92) The ratio of the ages of A and B is 3:2 and the ratio of the ages of C and D is 4:5. Average of the ages of A, B, C and D is 26 years.

Which of the following statement is satisfied?

Statement I: If Sum of the ages of A and C is 54, then difference between the ages of B and D is 12 years.

Statement II: If the ratio of the ages of A, B and C is 15:10:12, the present age of D is 30 years.

Statement III: If the average ages of A and B and C and D is 25 years and 27 years, the sum of the ages of B and C is 44.

A और B की आयु का अनुपात 3:2 है और C और D की आयु का अनुपात 4:5 है। A, B, C और D की औसत आयु 26 वर्ष है।

निम्नलिखित में से कौन सा कथन संतुष्ट है?

कथन I: यदि A और C की आयु का योग 54 है, तो B और D की आयु के बीच का अंतर 12 वर्ष है।

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

कथन II: यदि A, B और C की आयु का अनुपात 15:10:12 है, तो D की वर्तमान आयु 30 वर्ष है।

कथन III: यदि A और B तथा C और D की औसत आयु 25 वर्ष और 27 वर्ष है, तो B और C की आयु का योग 44 है।

- a) Only I
- b) Only II
- c) Only III
- d) Only II and III
- e) All I, II and III

93) Read all the statements and answer is 25 years.

Statement I: 5 years ago, the age of A and the age of B, 7 years after is in the ratio of 5: 7. The present age of A is equal to the average present age of B and C together. Then find the age of C, 7 years ago, if the average present age of A, B and C is 30 years?

Statement II: 4 years ago, the age of P and Q is 2: 3. The average present age of P, Q and R is 30 years. Find the age of P, 5 years ago, if the age of R, after 3 years is 20 years?

Statement III: After 3 years, the ratio of age of Q and R is 10: 13. P's present age is the sum of the age of Q and R, 5 years ago. Find the present age of P, if the present age of S is 4 years more than the present age of Q but 2 years less than the present age of R?

सभी कथन पढ़ें और उत्तर 25 वर्ष है।

कथन I: 5 वर्ष पहले, A की आयु और 7 वर्ष बाद B की आयु का अनुपात 5:7 है। A की वर्तमान आयु, B और C की औसत वर्तमान आयु के बराबर है। यदि A, B और C की औसत वर्तमान आयु 30 वर्ष है, तो 7 वर्ष पहले C की आयु ज्ञात कीजिए?

कथन II: 4 वर्ष पहले, P और Q की आयु 2:3 है। P, Q और R की औसत वर्तमान आयु 30 वर्ष है। 5 वर्ष पहले P की आयु ज्ञात कीजिए, यदि 3 वर्ष बाद R की आयु 20 वर्ष है?

कथन III: 3 वर्षों के बाद, Q और R की आयु का अनुपात 10:13 है। P की वर्तमान आयु, 5 वर्ष पहले Q और R की आयु का योग है। P की वर्तमान आयु ज्ञात करें, यदि S की वर्तमान आयु Q की वर्तमान आयु से 4 वर्ष अधिक है लेकिन R की वर्तमान आयु से 2 वर्ष कम है?

- a) Both statements I and II
- b) Both statements I and III
- c) Only statement I
- d) All the three statements
- e) None of these

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

94) Quantity-I: The ratio between the ages of Vijay and Ajay is 7: 4, the ratio between the ages of Manish and Raj is 13: 7, and the ratio between the ages of Ajay and Raj is 8: 7. If the sum of their ages is 168 years, then find the difference between the ages of Vijay after 16 years and Manish before 16 years.

Quantity-II: If 3 years is added to the present age of Nitesh and then multiplied by 4, the present age of Anurag is obtained. The present age of Anurag is twice the present age of Vikash, whose age is 34 years. Find the age of Nitesh 6 years hence.

मात्रा-I: विजय और अजय की उम्र के बीच का अनुपात 7: 4 है, मनीष और राज की उम्र के बीच का अनुपात 13: 7 है, और अजय और राज की उम्र के बीच का अनुपात 8: 7 है। उनकी आयु का योग 168 वर्ष है, तो 16 वर्ष के बाद विजय और 16 वर्ष से पहले मनीष की आयु के बीच अंतर ज्ञात कीजिए।

मात्रा-II: यदि नितेश की वर्तमान आयु में 3 वर्ष जोड़ा जाए और फिर 4 से गुणा किया जाए, तो अनुराग की वर्तमान आयु प्राप्त होती है। अनुराग की वर्तमान आयु विकास की वर्तमान आयु से दोगुनी है, जिसकी आयु 34 वर्ष है। 6 वर्ष बाद नितेश की आयु ज्ञात कीजिए।

- a) Quantity-I < Quantity-II
- b) Quantity-I > Quantity-II
- c) Quantity-I ≤ Quantity-II
- d) Quantity-I ≥ Quantity-II
- e) Quantity-I = Quantity-II or No relation

95) Quantity-I: The sum of the present ages of Babli and her husband is 63 years. Three years ago, the ratio of the ages of her son and husband was 3:13 respectively. If the ratio of the present ages of Babli and her son is 7:4 respectively, then what is the current age of her son?

Quantity-II: Ayan's father and mother are 25 years and 20 years respectively elder to him. Ayan's sister is 5 years younger to him. If the sum of present age of his mother, father and sister is 85 years, then what will be the age of Ayan after 6 years from now?

मात्रा-I: बबली और उसके पति की वर्तमान आयु का योग 63 वर्ष है। तीन वर्ष पहले, उसके बेटे और पति की उम्र का अनुपात क्रमशः 3:13 था। यदि बबली और उसके बेटे की वर्तमान उम्र का अनुपात क्रमशः 7:4 है, तो उसके बेटे की वर्तमान उम्र क्या है?

मात्रा-II: अयान के पिता और माता उससे क्रमशः 25 वर्ष और 20 वर्ष बड़े हैं। अयान की बहन उनसे 5 साल छोटी हैं। यदि उसके माता, पिता और बहन की वर्तमान आयु का योग 85 वर्ष है, तो अब से 6 वर्ष बाद अयान की आयु क्या होगी?

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

SOLUTION

1) Answer - B

Solution-

$$(A + 4)/(B + 4) = 3/4$$

$$4A + 16 = 3B + 12$$

$$3B - 4A = 4 \text{ ----- (1)}$$

$$A + 8 = B$$

$$B - A = 8 \text{ ----- (2)}$$

$$(1) - [(2) * 3]$$

$$-A = -20$$

$$A = 20$$

$$B = 20 + 8 = 28$$

$$\text{Required ratio} = 20 : 28 = 5 : 7$$

2) Answer - A

Solution-

$$(3x + 12)/(10x + 12) = 9/23$$

$$x = 8$$

$$\text{Ashutosh's present age} = 3 * 8 = 24 \text{ years}$$

$$\text{Grandmother's present age} = 10 * 8 = 80 \text{ years}$$

$$\text{sum of their ages 4 years ago} = 24 - 4 + 80 - 4 = 96$$

3) Answer - A

Solution-

$$A : B : C = 2 : 6 : 9 \text{ (2x, 6x, 9x)}$$

$$9x - 2x = 35$$

$$x = 5$$

$$\text{Required sum} = 2 * 5 + 6 * 5 + 9 * 5 = 10 + 30 + 45 = 85 \text{ years}$$

4) Answer - D

Solution-

$$5x * 8x = 360$$

$$x^2 = 9$$

$$x = 3$$

$$A's \text{ present age} = 8 * 3 = 24 \text{ years}$$

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

After 12 years B's age = $24 + 12 = 36$ years

5) Answer - A

Solution-

Ratio of age of A:B:C = 5 : 8 : 12

Ages of A, B, C is $5x, 8x, 12x$ respectively.

$$5x + 8x + 12x = 25 \times 3$$

$$25x = 75$$

$$x = 3$$

$$\text{Required answer} = 4x = 4 \times 3 = 12 \text{ years}$$

6) Answer - D

Solution-

$$(A - 8)/(B - 8) = 2/3$$

$$3A - 24 = 2B - 16$$

$$3A - 2B = 8 \text{ ---- (1)}$$

$$(B + 15) - (A + 15) = 6$$

$$B - A = 6 \text{ ---- (2)}$$

Solve (1) and (2) equation

$$A = 20 \text{ years}$$

$$B = 20 + 6 = 26 \text{ years}$$

$$\text{Sum} = 20 + 26 = 46 \text{ years}$$

7) Answer - C

Solution-

$$A = (8/7) \times B$$

$$A/B = 8/7$$

$$\text{Let } A = 8k, B = 7k$$

$$C = 7k \times 100/80 = (35/4)k$$

$$(35/4)k - 8k = 3$$

$$(35 - 32)k / 4 = 3$$

$$k = 4$$

$$\text{Present age of C} = 35 \text{ years}$$

8) Answer - C

Solution-

$$P : Q : R = 7 : 6 : 8$$

$$15x = 79.5$$

$$x = 5.3$$

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

The required age = $(6 \times 5.3) + 4 = 35.8$ years

9) Answer - A

Solution-

According to question

$$[V/(R + S)] = 1/3 \dots\dots\dots(1)$$

$$[R/(V + S)] = 1/1 \dots\dots\dots(2)$$

Solve (1) and (2)

$$V = S$$

So, ratio of their present ages Vishal, Rohit and Sumit = 1 : 2 : 1

$$1 \text{ unit} = 20$$

$$\text{Sum of present age} = 20 \times 4 = 80$$

$$\text{Sum of ages 3 years ago} = 80 - 4 \times 3 = 68 \text{ years}$$

10) Answer - C

Solution-

Let present age of mother = $12x$, therefore present age of Ashi = $5x$

Her son celebrated 20th birthday 6 years before, therefore present age of her son = 26 years

Mother's age after 5 years

$$12x + 4 = 2 \times (26)$$

$$12x + 4 = 52$$

$$x = 4$$

$$\text{Present age of mother} = 48$$

$$\text{Present age of Ashi} = 20$$

$$\text{Age of Ashi after 3 years} = 20 + 3 = 23 \text{ years}$$

11) Answer - C

Solution-

$$\text{Present age of L} = 2x + 5$$

$$\text{Present age of M} = 3x - 3$$

$$(3x - 3) - (2x + 5) = 7$$

$$x = 7 + 8 = 15$$

$$\text{Present age of L} = 35 \text{ years}$$

$$\text{Present age of M} = 42 \text{ years}$$

$$\text{Required sum} = (35 + 3) + (42 - 2) = 38 + 40 = 78 \text{ years}$$

12) Answer - A

Solution-

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

Let the present age of Anu and Radha are 'x' and 'y' years respectively.

$$(x - 5)/(y + 3) = 5/9$$

$$9x - 5y = 60 \text{ -----(1)}$$

$$(x + 4)/(y + 2) = 17/22 \text{ -----(2)}$$

From (1) and (2),

$$y = 42 \text{ years}$$

$$\text{Radha's age before 7 years} = 42 - 7 = 35 \text{ years}$$

13) Answer - A

Solution-

$$\text{Present age of Husband and wife} = 23.5 * 2 + 5 * 2 = 57 \text{ years}$$

$$\text{Present age of Husband, wife and child} = 20 * 3 = 60 \text{ years}$$

$$\text{Age of child} = 60 - 57 = 3 \text{ years}$$

14) Answer - A

Solution-

Let the age of family members be 6x, 7x and 10x

$$(6x - 8) + (7x - 8) + (10x - 8) = 68$$

$$23x - 24 = 68$$

$$23x = 68 + 24 = 92$$

$$x = 4$$

Present ages 24 years, 28 years and 40 years

15) Answer - A

Solution-

$$5 * 28 = 140 + 25 \text{ (5yrs ago)} = 165$$

$$\text{Birth of 2 children} = 7 * 25 = 175$$

$$175 - 165 = 10$$

$$2x + 2 = 10$$

$$x = 4$$

The age of two children is 6 and 4 years

16) Answer - B

Solution-

$$\text{Parent's age} = 29 * 2 = 58$$

$$\text{Children's age} = 4 * 3 = 12$$

$$\text{Grandparent's age} = 40.25 * 2 = 80.5$$

$$\text{Required average} = (58 + 12 + 80.5) / (2 + 3 + 2) = 150.5 / 7 = 21.5 \text{ years}$$

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

17) Answer - C

Solution-

Present age of A = $2x$

Present age of C = $5x$

Present age of B = $(2x + 5x)/2 - 3 = 3.5x - 3$

$5x - (3.5x - 3) = 12$

$1.5 = 9$

$x = 6$ years

Present age of B = 18 years

18) Answer - C

Solution-

Let Abhi's present age be x

Then,

$x - \frac{2}{3} * x = 6$

$x = 18$

Required age = $18 - 8 = 10$

19) Answer - C

Solution-

So, we can say, $(x+16)/(x+4+4) = 9/7$

Or, $7x + 112 = 9x + 72$

$2x = 40$

Or, $x = 20$

Age of B after 20 years = $20 + 4 + 20 = 44$ years

20) Answer - B

Solution-

$x + y = 85$ ---- (1)

$(x - 1)/(y + 1) = 7/10$

$10x - 10 = 7y + 7$

$10x - 7y = 17$ ----- (2)

Solve (1) and (2)

$x = 36, y = 49$

21) Answer - E

Let the present age of B is $2k$ and that of C is $3k$.

Also assume present age of A is $3m$ and D is $4m$.

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

Note that age difference between A and C will always be 20 years.

$$3k - 3m = 30$$

$$k - m = 10$$

$$\text{Also } 3k/3m = 2$$

$$k = 2m$$

$$m = 10 \text{ yrs}$$

$$k = 20 \text{ yrs}$$

$$\text{Average of A, B and C} = (30+40+60)/3 = 43.33 \text{ yrs}$$

22) Answer - C

Let age of Ajay, Vijay, Rony and Rahul is a, b, c and d respectively.

$$\text{Now, } b : c = 3 : 2 \quad \dots\dots (i)$$

$$b + c + d = 30 \times 3 = 90 \quad \dots\dots (ii)$$

$$a + b + c + d = 35 \times 4 = 140$$

$$a = 50 \text{ years}$$

$$\text{Also } d - b = 10$$

$$d = b + 10$$

Put this value in eq. (ii),

$$2b + c = 80$$

$$\text{From (i) } b = 30 \text{ years, } d = 40 \text{ years}$$

$$c = 20 \text{ years}$$

$$a + d = 50 + 40 = 90 \text{ years}$$

23) Answer - D

Let age of Ria and Sia 4 years ago be $7x$ and $9x$ respectively.

According to question,

$$9x = 7x + 4$$

$$x = 2$$

Their present age of Sia and Ria respectively is 22 and 18 years respectively.

$$\text{Ritu's age 4 yrs hence} = (22+18)/2 + 4 = 24$$

24) Answer - B

Let Amit's age, his wife's age, his first son's age and his second son's age is $20x$, $3y$, $9x$ and y respectively.

ATQ,

$$9x - y = 6 \quad \dots\dots (i)$$

$$20x + 3y + 9x + y = 26.5 \times 4 \quad \dots\dots (ii)$$

Solving (i) & (ii)

$$x = 2$$

$$y = 12$$

$$\text{His wife's age} = 12 \times 3 = 36$$

25) Answer - E

$$A+2B+C=59$$

$$3A+B+C=68$$

$$A+3B+3C=108$$

Solving the equation, $A = 12$ years, $B = 15$ years, $C = 17$ years.

Sum of their ages = 44 years.

26) Answer - C

Let present age of P, Q, R and S is $4x$, $5x$, $6y$ and $7y$ respectively.

Then, ATQ,

$$(4x-10)/(6y-10) = 1/2 \rightarrow 8x-20 = 6y-10$$

$$8x-6y = 10 \quad \dots\dots\dots(i)$$

Similarly

$$(5x-10)/(7y-10) = 3/5 \rightarrow 25x-50 = 21y-30$$

$$25x-21y = 20 \quad \dots\dots\dots(ii)$$

Solving (i) and (ii)

$$9x-9y = 0$$

$$x = y$$

Put this value in equation (i) we get, $x=y=5$

Therefore, average of P, Q and R together is $(15*5)/3 = 75/3 = 25$ yrs

27) Answer - D

Let present age of Vani&Surbhi be $3x$ and $4x$ respectively and present age of Divya&Siya be $2y$ and $3y$ respectively.

$$(3x+4x)/(2y+3y) = 63/65$$

$$x : y = 9 : 13 = 9k : 13k$$

ATQ -

$$3x+4x+2y+3y=128$$

$$3 \times 9k + 4 \times 9k + 2 \times 13k + 3 \times 13k = 128k = 128 \quad K=1$$

Therefore, age of Vani is 27 years.

Similarly, age of Siya is 39 years.

Sum of their present ages = 66 years

After 8 years, sum of their ages = $66 + 16 = 82$ years

28) Answer - E

Let age of Sneha 5 years ago = $5x$

Let age of Nitu 5 years ago = $4x$

According to question $(5x+10) + (4x+10) = (100\% + 400/9\%)(25+20)$

$$9x+20 = 13/9 \times 45$$

$$x=5$$

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

Sum of their present age = $(5+4) \times 5 + 10 = 45 \text{ year} + 10 \text{ years} = 55 \text{ years}$.
Required ratio = 6 : 5

29) Answer - A

Three year ago, sum of age of P, Q and R together = $27 \times 3 = 81 \text{ year}$

Four years hence, sum of ages of P, Q and R together = $81 + 7 \times 3 = 102$

Let Four years hence P's age be $7x \Rightarrow$ R's age be $10x$ and Q's age be $10x-6$

ATQ, $7x + 10x - 6 + 10x = 102 \Rightarrow 27x = 108 \Rightarrow x = 4$

Four years hence, P's age = $7 \times 4 = 28$

Present age of P = $28 - 4 = 24 \text{ year}$

30) Answer - D

Total age of Sony, Suman & Ajit = $32 \times 3 = 96 \text{ years}$

Total age 10 years ago = $96 - 30 = 66 \text{ years}$

Present age of Sony = $66/11 \times 2 + 10 = 22 \text{ years}$

31) Answer - A

Let the present age of father be x yr and that of son = $(65 - x)$ yr.

ATQ, $(x - 10)(65 - x - 10) = 5 \times (x - 10)$

$65x - x^2 - 10x - 650 + 10x + 100 = 5x - 50$

$-x^2 + 65x - 550 = 5x - 50$

$x^2 - 60x + 500$

$x = 50, 10$

Required ratio = $50/15 = 10:3$

32) Answer - A

Let the age of daughter be x yrs

Therefore, age of mother = $4x$ yrs

ATQ,

$(x-5) = (4x-5) \times 1/5$

$5x-25 = 4x-5$

$x = 20 \text{ yrs}$

Age of daughter = 20 yrs

33) Answer - D

Let the present age of daughter be x yrs

Present age of father = $3x$ yrs

After 5 yrs,

$(3x+5) = 5/2 \times (x+5)$

$x = 25 - 10 = 15$

10 yrs hence from present = $(3 \times 15 + 10)/25 + 10 = 55/25 = 2.2 \text{ times}$

34) Answer - A

Let Sam's present age is $5x$ yrs.

Then Neil's present age is $= x$ yrs.

After some years, Let Sam's age be $= 5y$ yrs.

Then, Neil's age be $= 60/100 * 5y = 3y$ yrs.

Now,

$$5x - x = 5y - 3y$$

$$\text{or, } 4x = 2y \text{ or, } y = 2x$$

Sam's present age $= 5x$

Sam's age after some years $= 5y = 5 \times 2x = 10x$

$$\% \text{ increase} = (10x - 5x) / 5x * 100 = 100\%$$

35) Answer - D

Sum of ages of P, Q and R $= 40 * 3 = 120$ yr

Let present age of R be x yrs

$$\text{So, } x + x = 120$$

$$x = 60 \text{ yrs}$$

$$\text{Age of P} = 60/3 * 2 = 40 \text{ yr}$$

$$\text{Age of Q} = 60 - 40 = 20 \text{ yrs}$$

$$\text{Required difference} = 60 - 20 = 40 \text{ yrs}$$

36) Answer - E

Let present age of Anuj $= x$

5 years ago, Age of Anuj $= x - 5$

5 years ago, age of Ambuj $= 3(x - 5)$

Anuj's age 5 year hence $= x + 5$

$$\text{So, Vijay's age 5 year ago} = (x + 5) / 3 * 5 = (5x + 25) / 3$$

Difference between Ambuj's and Vijay's age $= 10$

$$3(x - 5) - (5x + 25) / 3 = 10$$

$$9x - 45 - 5x - 25 = 30$$

$$4x = 100$$

$$x = 25 \text{ yrs}$$

37) Answer - D

Let present age of Aditya and Shiv be x and y respectively.

$$(x - 4) / (y - 4) = 9 / 7$$

$$-7x + 9y = 8 \quad \dots\dots\dots(i)$$

$$\text{Also, } (x + 8) / (y + 8) = 11 / 9$$

$$9x - 11y = 16 \quad \dots\dots\dots(ii)$$

Solving (i) and (ii)

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

$$x = 56 \text{ yr}$$

$$y = 46 \text{ yr}$$

$$\text{Required average} = \frac{1}{2}(58+46) = 52 \text{ yrs}$$

38) Answer - D

Let present age of A be x and that of B be y yrs

ATQ,

$$(x+5)/(y-3) = 5/3$$

$$3x-5y = -30 \quad \dots\dots\dots(i)$$

$$(x-4)/(y+2) = 4/5$$

$$5x-4y = 28 \quad \dots\dots\dots(ii)$$

Solving equations (i) and (ii)

$$x = 20 \text{ yrs (elder)}$$

$$y = 18 \text{ yrs}$$

39) Answer - C

Let A's age, B's age and C's age is a , b and c respectively .

$$a + b + c = 3 \times 27 - 15 = 81 \quad 15 = 66 \dots(i)$$

$$(a-6)/(b-6) = 6/7$$

$$7a-6b = 6 \quad \dots\dots\dots(ii)$$

$$b = c-8 \quad \dots\dots\dots(iii)$$

Using (i), (ii) and (iii)

$$(6b+6)/7 + b + b + 8 = 66$$

$$(6b+6+7b+7b+56)/7 = 66$$

$$20b = 66 \times 7 - 62 = 400$$

$$b = 20$$

$$a = 18$$

$$c = 28$$

$$\text{Required difference} = 28-18 = 10 \text{ years}$$

40) Answer - D

Let the present ages of Ram and his daughter be x and y respectively.

$2n$ years ago,

$$x - 2n = 4(y-2n)$$

$$x = 4y-6n \dots\dots\dots(i)$$

n years ago,

$$x - n = 3(y-n)$$

$$x = 3y-2n \dots\dots\dots(ii)$$

Solving (i) and (ii)

$$y = 4n$$

$$\text{And, } x = 4 \times 4n - 6n = 10n$$

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

n years later,

$$x + n + y + n = 80$$

$$4n + n + 10n + n = 80$$

$$16n = 80$$

$$n = 5$$

$$\text{Difference in their ages} = 10n - 4n = 50 - 20 = 30$$

41) Answer - A

$$A + S + 30 = 2(A + S)$$

$$\Rightarrow A + S = 30 \text{ ----} > (1)$$

$$A - S = 14 \text{ ----} > (2)$$

$$\therefore A = 22 \text{ years \& } S = 8 \text{ years}$$

42) Answer - B

$$(A - 5)/(P - 5) = 3/1; \quad R = 10 + P(0.5)$$

$$\Rightarrow A - 5 = 3P - 15$$

$$R = 10 + (10)(0.5) = 15$$

$$\Rightarrow 3P - A = 10$$

$$\Rightarrow 3P - (25 - 5) = 10$$

$$\Rightarrow P = 10$$

$$\therefore P:R = 2:3$$

43) Answer - E

$$S:G = 2:3$$

$$M = 2x + 8 \text{ \& } M = 3x - 4 \Rightarrow 2x + 8 = 3x - 4 \Rightarrow x = 12$$

$$\therefore S + M = 2(12) + 2(12) + 8 = 56 \text{ years}$$

44) Answer - C

$$A \cdot N = 448 \text{ \& } 2A = N + 4$$

$$A(2A - 4) = 448 \Rightarrow 2A^2 - 4A - 448 = 0 \Rightarrow A^2 - 2A - 224 = 0$$

$$\therefore A = 16 \text{ years}$$

45) Answer - C

$$N = 5S \text{ \& } N = 5F/7$$

$$\Rightarrow [N + (N/5) + (7N/5)]/3 = 26$$

$$\Rightarrow 13N = 390$$

$$\Rightarrow N = 30$$

$$\therefore S + F = 6 + 42 = 48 \text{ years}$$

46) Answer - C

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

$$R:K = 3:4$$

$$S = 4x + 3$$

$$3x + 4x + 4x + 3 = 34 \times 3 \Rightarrow 11x = 99 \Rightarrow x = 9$$

$$\therefore 2(3)(9) - 4 = 50 \text{ years}$$

47) Answer - B

$$A + 3 = 3B \text{ \& } C = B + 14$$

$$\Rightarrow B = C - 14$$

$$\Rightarrow B = (28 - 4) - 14 = 10$$

$$\therefore A = 3B - 3 = 27 \text{ years}$$

48) Answer - A

$$G:M = 25:x$$

$$M = N - 7 \Rightarrow M = (35 - 7) - 7 = 21$$

$$25k + 25 = 21 + 28 + 1 \Rightarrow k = 1$$

$$\therefore x = 21$$

49) Answer - C

$$R - A = 15 \text{ \& } (R + 3)/(A + 3) = 2 \Rightarrow R + 3 = 2A + 6 \Rightarrow R - 2A = 3$$

$$\Rightarrow R = 27$$

$$\therefore 26 + 27 = 53 \text{ years}$$

50) Answer - D

$$(R - 7)/8 = A \text{ \& } A = M - 3 \Rightarrow A = 10 - 3 = 7$$

$$\Rightarrow R - 7 = 7 \times 8$$

$$\therefore R = 63 \text{ years}$$

51) Answer - D

$$7x + 5x + x + 3(8) + 4 = 4(20)$$

$$\Rightarrow 13x = 52 \Rightarrow x = 4$$

$$\therefore \text{Age of oldest person in 2003} = 7(4) + 1 = 29 \text{ years}$$

52) Answer - C

$$W + D - 2(17) = 2(32.5)$$

$$\Rightarrow W + D = 99 \text{ ----> (1)}$$

$$\text{Given, } 2W = 3D + 18 \text{ ----> (2)}$$

$$\Rightarrow D = 36$$

$$\therefore 36 + 17 = 53 \text{ years}$$

53) Answer - B

$$P = 2Q/5; Q = 4R/3$$

$$P + (5P/2) + (15P/8) = 129$$

$$\Rightarrow 43P = 129 \times 8$$

$$\Rightarrow P = 24$$

$$\therefore R - P = 45 - 24 = 21 \text{ years}$$

54) Answer - C

$$M + N = B \text{ \& } M = N \Rightarrow B = 2M$$

$$(M - 4)/(B - 4) = 5/12$$

$$\Rightarrow 12M - 48 = 5B - 20$$

$$\Rightarrow 12(B/2) - 5B = 28$$

$$\Rightarrow B = 28$$

$$\therefore 28 + 7 = 35 \text{ years}$$

55) Answer - B

$$S:R = 4:5$$

$$(4x + 5)/(5x + 5) = 5/6$$

$$\Rightarrow 24x + 30 = 25x + 25$$

$$\Rightarrow x = 5$$

$$\therefore 9(5) + 2(10) = 65 \text{ years}$$

56) Answer - D

$$(P - 6)/(Q - 6) = 7/8$$

$$\Rightarrow 8P - 48 = 7Q - 42$$

$$\Rightarrow 8P - 7Q = 6 \text{ ----> (1)}$$

$$(P + 10)/(Q + 10) = 11/12$$

$$\Rightarrow 12P + 120 = 11Q + 110$$

$$\Rightarrow 12P - 11Q = -10 \text{ ----> (2)}$$

$$\therefore Q = 38 \text{ years}$$

57) Answer - B

Let elder sister age be x and younger sister be y.

$$x - y = 10 \text{ ----> (1)}$$

$$x - 5 = (5/3)(y - 5)$$

$$\Rightarrow 3x - 15 = 5y - 25$$

$$\Rightarrow 3x - 5y = -10 \text{ ----> (2)}$$

$$\therefore y = 20 \text{ years \& } x = 30 \text{ years}$$

58) Answer - C

$$R = F/3 \text{ \& } F + 8 = 2K \Rightarrow F + 8 = 2(26 + 5) \Rightarrow F = 54$$

$$\therefore R = 18 \text{ years}$$

59) Answer - B

$$A - V = K - A \Rightarrow 2A = K + V = 54 \Rightarrow A = 27$$

60) Answer - B

$$R = (x/100) * (R - 4)$$

$$\Rightarrow 100R = x(R - 4)$$

$$\Rightarrow x = 100R / (R - 4)$$

$$R = (9/10) * (R + 4)$$

$$\Rightarrow 10R = 9R + 36$$

$$\Rightarrow R = 36$$

61) Answer - D

$$[(6/5)(V - 3)] / [(4/3)(C - 3)] = \frac{3}{4}$$

$$\Rightarrow 3(6V - 18) / 5(4C - 12) = \frac{3}{4}$$

$$\Rightarrow 24V - 72 = 20C - 60$$

$$\Rightarrow 24V - 20C = 12 \text{ ----} > (1)$$

$$(V + 2) / (C + 2) = 6/7$$

$$\Rightarrow 7V + 14 = 6C + 12$$

$$\Rightarrow 7V - 6C = -2 \text{ ----} > (2)$$

$$V = 28 \text{ years \& } C = 33$$

$$\therefore (1/4) * (28 + 33) = 15.25 \text{ years}$$

62) Answer - D

$$2x + 5x + 7x = 28 * 3$$

$$\Rightarrow x = 6$$

$$\therefore 7(6) + 10 = 52 \text{ years}$$

63) Answer - C

$$F - 6 = 5F/6$$

$$\Rightarrow F = 36$$

$$\therefore (1/4) * 36 - 6 = 3 \text{ years}$$

64) Answer - C

$$(S - 4) = 6S/7$$

Connect with

$$\therefore \text{Suraj} : \text{Suraj's son} = 28:14 = 2:1$$

65) Answer - E

$$M = 3B/2$$

$$F = 20 + M$$

$$M + (2M/3) + M + 20 = 28 \times 3$$

$$\Rightarrow 8M = 64 \times 3$$

$$\therefore M = 24 \text{ years}$$

66) Answer - B

$$S = V/9 \text{ \& } V + 10 = 2(R + 10) \Rightarrow V = 2[(19 + 3) + 10] - 10$$

$$\Rightarrow V = 54$$

$$\therefore S = 6 \text{ years}$$

67) Answer - A

$$A - R = R - K \Rightarrow A + K = 2R \text{ ----> (1)}$$

$$R - A = R - K \Rightarrow A = K \text{ (Not possible)}$$

$$A - K = 6 \text{ ----> (2) \quad or \quad } K - A = 6 \text{ ----> (3)}$$

$$A + R + K = 81 \text{ ----> (4)}$$

$$\text{From 1 \& 4; } R = 27 \text{ years}$$

$$\text{From 1 \& 2; } A = 30 \text{ years \& } K = 24 \text{ years}$$

$$A:R:K = 30:27:24$$

$$\therefore A:R:K = 10:9:8$$

68) Answer - D

$$D:A = 5:8$$

$$I = (5x + 8x + 2)/2$$

$$[(13x + 2)/2] / (8x - 4) = 10/11$$

$$\Rightarrow (13x + 2) / 2(8x - 4) = 10/11$$

$$\Rightarrow 143x + 22 = 160x - 80$$

$$\Rightarrow 17x = 102$$

$$\Rightarrow x = 6$$

$$\therefore [5(6) + 5] : 40 = 35:40 = 7:8$$

$$S = 10 \text{ years} \& F = 50 \text{ years}$$
$$\therefore (50 + 30)/(10 + 30) = 2 \text{ times}$$

76) Answer - C

$$(5x - 5)/(9x - 4) = \frac{1}{2}$$
$$\Rightarrow 10x - 10 = 9x - 4$$
$$\Rightarrow x = 6$$
$$\therefore (5*6 - 7), (9*6 + 6) = 23, 60$$

77) Answer - B

$$M:T = 4:5 \text{ ----} \rightarrow (1)$$
$$B + R + 4 = 60 \Rightarrow B + R = 56 \text{ ----} \rightarrow (2)$$
$$R:S = 8:7 \text{ ----} \rightarrow (3)$$
$$(B + 10)/(S + 10) = 17/19$$
$$19B + 190 = 17S + 170$$
$$17S - 19B = 20 \text{ ----} \rightarrow (4)$$
$$T - 10 = (5/8)*B$$
$$8T - 80 = 5B \text{ ----} \rightarrow (5)$$

From 2, 3 & 4;

$$B = 56 - 8x \& 19B = 17(7x) - 20$$
$$\Rightarrow 1064 - 152x = 119x - 20$$
$$\Rightarrow 271x = 1084$$
$$\Rightarrow x = 4$$
$$R = 32 \text{ years}, S = 28 \text{ years}, B = 24 \text{ years}, T = 25 \text{ years}, M = 20 \text{ years}$$
$$\therefore (20 + 28) : [(25 + 24 + 32)]/3 = 48:27 = 16:9$$

78) Answer - E

Let the current average age be y.

$$(150/100)(y - 4) = y$$
$$\Rightarrow 3y - 12 = 2y$$
$$\Rightarrow y = 12$$
$$\therefore X = [12(50) + 24 + 32]/52 = 12.62$$

79) Answer - C

$$K:P = 5:7 \& P:R = 5:6$$
$$5x + 15 = (4/5)(7x + 15)$$
$$\Rightarrow 25x + 75 = 28x + 60$$
$$\Rightarrow x = 5$$
$$\therefore 7(5/5)*6 + 15 = 57 \text{ years}$$

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

80) Answer - 0

$$(G - 6)/(K - 6) = 3/5$$

$$\Rightarrow 5G - 30 = 3K - 18$$

$$\Rightarrow 5G - 3K = 12 \text{ ----} > (1)$$

$$(K + 6)/(G + 6) = 13/9$$

$$\Rightarrow 9K + 54 = 13G + 78$$

$$\Rightarrow 13G - 9K = -24 \text{ ----} > (2)$$

$$G = 30 \text{ years \& } K = 46 \text{ years}$$

$$\therefore K - G = 16 \text{ years}$$

81) Answer - D

Present age of Rathish = $4x$ years

Present age of Miklan = $3x + 15$

Age of Sharmila after 9 years is 33.33% more than her present age

Present age of Sharmila = y years

After 9 years, age of Sharmila = $4y/3$ years

$$(4y/3) - y = 9$$

$$y = 27$$

Present age of Sharmila = 27 years

Ratio of the age Rathish to Miklan is 8: 11

$$4x / (3x + 15) = 8/11$$

$$44x = 24x + 120$$

$$20x = 120$$

$$x = 6$$

Present age of Rathish $4x = 24$ years

Present age of Miklan = 33 years

Average age of Rathish, Sharmila and Shalini = 30 years

$$(24 + 27 + \text{Shalini's age})/3 = 30$$

$$\text{Shalini's age} = 90 - 51$$

$$\text{Shalini's age} = 39 \text{ years}$$

$$\text{Difference of Rathish and Shalini's age} = 39 - 24 = 15 \text{ years}$$

$$\text{Sum of the ages of Miklan and Sharmila together} = 33 + 27 = 60 \text{ years}$$

$$\text{Required percentage} = 15/60 * 100 = 25\%.$$

82) Answer - A

The average age of A, C, and D before 2 years of marriage = 39 years

The sum of the ages of A, C, and D before 2 years of marriage = $39 * 3 = 117$ years

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

The average age of the family after A married B = 37 years

The sum of the ages of the family after A married B = $37 * 4 = 148$ years

Age of B at the time of her marriage = $148 - (117 + 6) = 25$ years

Age of A at the time of his marriage = $25 + 3 = 28$ years

The ratio of the age of C to D at the time of A's marriage = 10: 9

The sum of the ages of C and D together at the time of A's marriage = $148 - (25 + 28) = 95$ years

Age of C at the time of A's marriage = $95/19 * 10 = 50$ years

Age of D at the time of A's marriage = $95/19 * 9 = 45$ years

The average age of the family A, B, C, and D at the birth of the new baby = $37 + 3 = 40$ years

The sum of the ages of A, B, C, and D at the birth of the baby = $40 * 4 = 160$

If the age of the baby is x years (each of them increased by x)

$(160 + 4x) + x = 37 * 5$

$160 + 5x = 185$

$5x = 25$

$x = 5$

Age of A, x years before his marriage = $28 - 5 = 23$ years

83) Answer - A

I) 5:3, 25: 18, 14

Let seven years ago age of Aman and Babita is 5x and 3x

$5x + 7 - 3x - 7 = 14$

Or, $2x = 14$

$x = 7$

Eight years hence ratio of age is = $5 * 7 + 7 + 8 : 3 * 7 + 7 + 8 = 50 : 36 = 25 : 18$

So, it is true.

II) 4:5, 7: 8, 5

Let seven years ago age of Aman and Babita is 4x and 5x

$5x + 7 - 4x - 7 = 5$

Or, $x = 5$

Eight years hence ratio of age is = $4 * 5 + 7 + 8 : 5 * 5 + 7 + 8 = 35 : 40 = 7 : 8$

So, it is true.

III) 7:9, 6:7, 6

Let seven years ago age of Aman and Babita is 7x and 9x

$9x + 7 - 7x - 7 = 6$

Or, $x = 3$

Eight years hence ratio of age is = $7 * 3 + 7 + 8 : 9 * 3 + 7 + 8 = 36 : 42 = 6 : 7$

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

So, it is true.

84) Answer - D

$$\text{I. } (9x + 4) / (8x + 4) = 10/9$$

$$x = 4$$

$$\text{Present age of Shyam's father} = 9 \times 4 = 36$$

$$\text{Present age of Shyam's Mother} = 8 \times 4 = 32$$

$$\text{Sum of the age of the family} = 22 \times 4 = 88$$

$$\text{Age of Shyam} = (88 - 36 - 32) \times 2 / 5 = 8$$

$$\text{II. } (10x + 4) / (9x + 4) = 11/10$$

$$x = 4$$

$$\text{Present age of Shyam's father} = 10 \times 4 = 40$$

$$\text{Present age of Shyam's Mother} = 9 \times 4 = 36$$

$$\text{Sum of the age of the family} = 25 \times 4 = 100$$

$$\text{Age of Shyam} = (100 - 36 - 40) \times 3 / 8 = 9$$

$$\text{III. } (11x + 4) / (10x + 4) = 12/11$$

$$x = -8$$

x is not negative.

Hence Only I and II

85) Answer - D

The average age of 35 students and one teacher together in a class = 20 years

$$\text{The sum of the ages of 35 students and one teacher together in a class} = 20 \times 36 = 720 \text{ years}$$

The average age of 35 students before two students left = 19 years

$$\text{The sum of the ages of 35 students before two students left} = 19 \times 35 = 665 \text{ years}$$

$$\text{Age of teacher} = 720 - 665 = 55 \text{ years}$$

The average age of the class after two students left and three new students joined = 21 years

The sum of the ages of the class after two students left and three new students joined

$$= 21 \times (36 - 2 + 3) = 21 \times 37 = 777 \text{ years}$$

According to the question,

$$720 - 18 - P + 25 + 2(P + 12.5) = 777$$

$$727 - P + 2P + 25 = 777$$

$$752 + P = 777$$

$$P = 25$$

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

Value of $P = 25$

The average age of the principal and 35 students = 21 years

The sum of the ages of the principal and 35 students together = $21 * 36 = 756$ years

The sum of the ages of 35 students before two students left = $19 * 35 = 665$ years

Age of principle = $756 - 665 = 91$ years

The sum of the ages of the teacher and principal together = $91 + 55 = 146$ years
(Age of B can't be calculated without Age of C)

Thus, B, C, and D can be calculated.

86) Answer: B

From statement I,

Let, age of B and C is $3x$ and $5x$ respectively

Age of A = $5x - 5$

Statement I alone is not sufficient

From statement II,

$B + 5 = A \Rightarrow B = A - 5$

$D = C - 1$

$A = D - 4$

$A = C - 1.4$

Then $C = A + 5$

$(B + 3) / (C + 2) = 2/3$

So, $(A - 5 + 3) / (A + 5 + 2) = 2/3$

Hence $A = 20$ years

So, the data in statement II alone is sufficient to answer the question

87) Answer - D

From statement (I)

Z is the younger sister of X

X is 6 years younger than Y

$Y = X + 6$

From statement (II)

$Y + Z = 24$

And mother's age is 30 when Z was born

From statement (III)

$Y - Z = 8$

From statement (II) and (III)

$Y + Z = 24$

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

$$Y - Z = 8$$

So Y's age = 16 years

Z's age = 8 years

From statements (I), (II) and (III)

$$Y = X + 6$$

$$16 = X + 6$$

$$X = 10 \text{ years}$$

Hence, all three statements together are required to answer this question.

88) Answer - B

From statement I,

Ratio of age of Aman to Akash = $3x / 5 * x$

Difference of Anit and Aman is 1.

From Statement II,

Age of Manju is either 16 or 25.

Age of Anit is either 14 or 23.

From Statement III,

Age of Akash is 25

From I and III

$$\text{Age of Aman} = 25 \times \frac{3}{5} = 15$$

$$\text{So, Age of Anit} = 29 - 15 = 14 \text{ years}$$

The sum of the ages of Aman and Anit is 29.

89) Answer - B

Let's consider the present age of Ankit, Anjan, Krish and Rohit are a, b, c and d years respectively.

From statement I,

Average present age of Ankit and Krish together is 10 years more than the present age of Anjan

$$(a + c)/2 = 10 + 20$$

$$a + c = 60 \text{ ---(1)}$$

Statement I alone is not sufficient to answer the question.

From statement II,

Average age of Ankit, Anjan, Krish and Rohit = 26 years

Present average age of four persons is equal to the age of Rohit after 2 years

$$\text{Present age of Rohit} = 26 - 2 = 24 \text{ years}$$

Age of Rohit is four years older than Sanakar

$$\text{Present age of Anjan} = 24 - 4 = 20 \text{ years}$$

Statement II alone is not sufficient to answer the question.

From statement III,

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

Difference between the sum of the present age of Ankit and Rohit together and the present age of Anjan is equal to the present age of Krish

$$(a + d) \sim b = c$$

Statement III alone is not sufficient to answer the question.

From statement I and II together,

Present age of Rohit = 20 years

Present age of Anjan = 28 years

$$\text{Sum of the Ankit and Krish} = 4 * 26 - (20 + 24) = 60$$

$$a + c = 60$$

Statements I and II together are not sufficient to answer the question.

From statement II and III together,

Present age of Rohit = 20 years

Present age of Anjan = 28 years

Difference between the sum of the present age of Ankit and Rohit together and the present age of Anjan is equal to the present age of Krish (Age of Rohit is less than Anjan)

$$(a + d) \sim b = c$$

$$(a + 24) - 20 = c$$

$$a + 4 = c$$

Statements II and III together are not sufficient to answer the question

From statements I and III together,

$$a + c = 60$$

$$c = 60 - a$$

$$(a + d) \sim b = c$$

$$(a + d) \sim b = 60 - a$$

Statements I and III together are not sufficient to answer the question.

From statements I, II and III together,

Average age of Ankit, Anjan, Krish and Rohit = 26 years

Present average age of four persons is equal to the age of Rohit after 2 years

$$\text{Present age of Rohit} = 26 - 2 = 24 \text{ years}$$

Age of Rohit is four years older than Anjan

$$\text{Present age of Anjan} = 24 + 4 = 28 \text{ years}$$

Average present age of Ankit and Krish together is 10 years more than the present age of Anjan

$$(a + c)/2 = 10 + 20$$

$$a + c = 60 \text{ ---(1)}$$

Difference between the sum of the present age of Ankit and Rohit together and the present age of Anjan is equal to the present age of Krish

$$(a + 24) - 20 = c$$

$$a + 4 = c$$

$$c - a = 4 \text{ ---(2)}$$

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

Solving the equation (1) and (2),

$$c = 32$$

$$a = 28$$

Present age of Ankit = 28 years

Thus, statements I, II and III together are necessary to answer the question.

90) Answer – B

Let's consider the present age of Sumit, Shruti, Sangita and Ranjana are a, b, c and d years respectively.

From statement I,

Ratio between the age of Sumit after five years and the present age of Sangita = 2: 1

$$(a + 5)/c = 2/1$$

$$a + 5 = 2c$$

$$c = (a + 5)/2$$

Statement I alone is not sufficient to answer the question.

From statement II,

After 5 years, the age of Sumit is double the age of Ranjana at that time

$$(a + 5)/(d + 5) = 2/1$$

$$a + 5 = 2d + 10$$

$$a = 2d + 5$$

$$d = (a - 5)/2$$

Statement II alone is not sufficient to answer the question.

From statement III,

The present age of Ranjana is equal to the age of Ankita at the time of Ranjana's birth

The ratio between the present age of Ankita and Ranjana = 2: 1

Statement III alone is not sufficient to answer the question.

From statement I and II together,

$$a + 5 = 2c$$

$$a = 2c - 5 \dots\dots i)$$

$$d = (a - 5)/2 \dots\dots ii)$$

from i) and ii),

$$2d + 5 = 2c - 5$$

$$d + 5 = c$$

Statements I and II together are not sufficient to answer the question.

Combination of statements II and III together,

$$d = (a - 5)/2$$

Ratio between the present age of Ankita and Ranjana = 2: 1

$$b = a - 5$$

Statements II and III together are not sufficient to answer the question.

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

Combination of statements I and III,

$$c = (a + 5)/2$$

Ratio between the present age of Ankita and Ranjana = 2: 1

Statements I and III together are not sufficient to answer the question.

From statements I, II and III together,

$$c = (a + 5)/2 \text{ ---(1)}$$

$$d = (a - 5)/2 \text{ ---(2)}$$

Present age of Ranjana is equal to the age of Ankita at the time of Ranjana's birth

Ratio between the present age of Ankita and Ranjana = 2: 1

$$b/d = 2/1$$

$$d = b/2 \text{ ---(3)}$$

$$(a - 5)/2 = b/2$$

$$b = a - 5 \text{ ---(3)}$$

Difference between the age of Sumit and Ankita is 5 years

$$a - b = 5$$

$$b = a - 5 \text{ (We got the same equation (3))}$$

We cannot proceed further, so we cannot be determined.

Thus, Statements I, II and III together are not sufficient to answer the question.

91) Answer - A

Statement II and III together:

Let the age of Santosh, Gourav, Sourav and Kavita be P, M, B and S respectively.

$$M - B = 3 \text{ --> (1)}$$

From II,

$$B + S = 45 \text{ --> (2)}$$

From III,

$$M - S = 6 \text{ --> (3)}$$

Adding (1) and (3)

$$2M - (B + S) = 9$$

Put (2) in above equation.

$$2M - 45 = 9$$

$$2M = 54$$

$$M = 27$$

$$S = 21 \text{ years}$$

The age of Kavita is 21 years.

Thus Statements II and III together are sufficient.

92) Answer - D

$$A/B = 3/2$$

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

$$C/D = 4/5$$

$$A + B + C + D = 26 \times 4 = 104$$

From I,

$$A + C = 54$$

$$B + D = 104 - 54 = 50$$

We cannot find the value of B and D

From II,

$$A/B = 3/2$$

$$C/D = 4/5$$

$$A + B + C + D = 26 \times 4 = 104$$

$$A : B : C = 15 : 10 : 12$$

$$B : C = 10 : 12 = 5/6$$

$$C : D = 4 : 5$$

$$B : C : D = 10 : 12 : 15$$

$$A : B : C : D = 15 : 10 : 12 : 15$$

$$52x = 104$$

$$x = 2$$

$$D = 2 \times 15 = 30$$

This satisfied.

From III,

$$A/B = 3/2$$

$$C/D = 4/5$$

$$A + B + C + D = 26 \times 4 = 104$$

$$A + B = 50$$

$$B = 2/5 \times 50 = 20$$

$$C + D = 54$$

$$C = 4/9 \times 54 = 24$$

$$B + C = 44$$

This satisfied.

93) Answer - A

Statement I:

5 years ago, the age of A and the age of B, 7 years after is in the ratio = 5: 7
(5x, 7x)

The present age of A and B = 5x + 5, 7x - 7

The present age of A = The average present age of B and C together

$$5x + 5 = (7x - 7 + C)/2$$

$$10x + 10 - 7x + 7 = C$$

The present age of C = 3x + 17

The average present age of A, B and C = 30 years

Given,

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

$$5x + 5 + 7x - 7 + 3x + 17 = 90$$

$$15x + 15 = 90$$

$$15x = 75$$

$$x = 5$$

The age of C, 7 years ago = $3x + 17 - 7 = 15 + 10 = 25$ years

Statement II:

4 years ago, the age of P and Q = 2 : 3 (2x, 3x)

The present age of P and Q = $2x + 4, 3x + 4$

The average present age of P, Q and R = 30 years

Given,

$$2x + 4 + 3x + 4 + 17 = 90$$

$$5x + 25 = 90$$

$$5x = 65$$

$$x = 13$$

The age of P, 5 years ago = $2x - 1 = 25$ years

Statement III:

After 3 years, the ratio of age of Q and R = 10: 13 (10x, 13x)

A's present age = Sum of the age of Q and R, 5 years ago

$$= > (10x + 13x - 6 - 10) = 23x - 16$$

Given,

$$10x - 3 + 4 = 13x - 3 - 2$$

$$10x + 1 = 13x - 5$$

$$6 = 3x$$

$$x = 2$$

The present age of P = $23x - 16 = 46 - 16 = 30$ years

Only statements I and II satisfy the value given in the question.

94) Answer - B

Quantity-I

The ratio between the ages of Vijay and Ajay = 7: 4

The ratio between the ages of Manish and Raj = 13: 7

The ratio between the ages of Ajay and Raj = 8: 7

The ratio among the ages of Vijay, Ajay, Manish, and Raj = 14: 8: 13: 7

Sum of their ages = 168 years

$$14x + 8x + 13x + 7x = 168$$

$$42x = 168$$

$$x = 4$$

Age of Vijay = $14 * 4 = 56$ years

Age of Vijay after 16 years = 72 years

Age of Manish = $13 * 4 = 52$ years

Age of Manish before 16 years = 36 years

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

$$\text{Difference} = 72 - 36 = 36$$

Thus, the difference between the ages of Vijay after 16 years and Manish before 16 years = 36 years

Quantity-II

Let the present age of Nitesh, Anurag, and Vikash be A, S, and M respectively. If 3 years is added to the present age of Nitesh and then multiplied by 4, the present age of Anurag is obtained

$$(A + 3) * 4 = S$$

$$4A + 12 = S \text{ ----} > (i)$$

The present age of Anurag is twice the present age of Vikash, whose age is 34 years

$$S = 2 * M$$

$$S = 2 * 34$$

$$S = 68$$

Substitute S = 68 in (i)

$$4A + 12 = S$$

$$4A + 12 = 68$$

$$4A = 56$$

$$A = 14$$

The present age of Nitesh = 14 years

Age of Nitesh 6 years hence = 20 years

95) Answer - A

Quantity-I

Let assume the age of Babli as '7x', age of her husband as '63-7x' and age of her son as '4x'

Then

$$(4x-3): (63-7x-3) = 3/13$$

$$52x - 39 = 189 - 21x - 9$$

$$73x = 219$$

$$x = 3$$

So, age of her son = 12 years

Quantity-II

Let present age of Ayan is 'x' years

Present age of his father = 25+x

Present age of his mother = 20+x

Present age of his sister = x- 5

Then,

$$25+x + 20+x + x- 5 = 85$$

$$40+3x = 85$$

$$x = 15$$

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

So, Ayan age is 15 years. So, age of Ayan after 6 years from now is 21 years

96) Answer - A

Quantity-I

$$\text{Sonu's present age} = 37 - 2 = 35$$

$$\text{Babli} = 35 - 5 = 30$$

$$\text{Rakesh} - \text{Babli} = \text{Sonu}$$

$$\text{Hence, age of Rakesh} = 65$$

$$\text{So, age of Sunita} = (65/15) * 6 = 26$$

Quantity-II

$$B - 2A = 4$$

$$\text{The present age of A} = 2x - 4$$

$$\text{The present age of B} = 3x + 4$$

$$(3x + 4) - 2(2x - 4) = 4$$

$$3x + 4 - 4x + 8 = 4$$

$$-x + 12 = 4$$

$$x = 8$$

$$\text{The present age of B} = 28$$

$$\text{The present age of C} = 28 + 4 = 32$$

97) Answer - B

Quantity-I

$$\text{The present age of Ritesh} = 85 - 19 = 66$$

$$\text{Prince age} = 66 - 12 = 54$$

$$\text{Priya age} = 54/9 * n = 6n$$

$$6n - 54 = 60$$

$$6n = 114$$

$$n = 19$$

Quantity-II

$$\text{Before 1 year, Nikhil's age} = x - 1$$

$$\text{Nikhil's grandfather age after 2 years} = 5(x-1) = 5x - 5$$

$$\text{The present age of Nikhil} = x$$

$$\text{Grandfather present age} = 5x - 5 - 2 = 5x - 7$$

$$x + 5x - 7 = 65$$

$$6x = 72$$

$$x = 12$$

98) Answer - B

Quantity-I

$$\text{The present age of A} = 3x - 4$$

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

The present age of B = $2x$

The present age of D = $(3x - 4 + 3) * 0.8 = 2.4x - 0.8$

The present age of C = $(2.4x - 0.8 + 2) * 1.2 = 2.88x + 1.44$

The total present age A, B, C, and D = $32 * 4 - 2 * 4 = 128 - 8 = 120$

$3x - 4 + 2x + 2.4x - 0.8 + 2.88x + 1.44 = 120$

$10.28x - 3.36 = 120$

$x = 12$

The present age of F = $(2.88 * 12 + 1.44) / 3 * 4 = 36 / 3 * 4 = 48$ years

Quantity-II

The present age of the father = $4x$

The present age of the mother = $3x + 8$

The present age of the son = $(3x + 8) / 2 = 1.5x + 4$

The present age of the daughter = $(3x + 8) / 4 * 3 - 7$

$= (9x + 24 - 28) / 4$

$= (9x - 4) / 4$

The present age of the father = the present age of the son + the present of the daughter

$4x = 1.5x + 4 + (9x - 4) / 4$

$16x = 6x + 16 + 9x - 4$

$x = 12$

The present age of the mother = $3 * 12 + 8 = 44$ years

99) Answer - D

Quantity-I:

Let, age of Kriti = $4x$ and age of Malti = $3x$

Age of Jitesh = $3x + 6$

Age of Anita = y

Now, according to the question,

$y - 4 + 4x - 4 = 56$

$\Rightarrow y = 64 - 4x$

Also given,

$y + 3x = 4x - 11 + 3x + 6 - 11$

$64 - 4x + 3x = 4x - 11 + 3x + 6 - 11$

$64 = 8x - 16$

$\Rightarrow x = 10$

Therefore, age of Anita, $y = 64 - 4 * 10 = 64 - 40 = 24$ years

Quantity-II:

Six years hence Jothi will be thrice her daughter's age

$J + 6 = 3 * (D + 6)$

$J + 6 = 3D + 18$

$J - 3D = 12 \text{ -----} > (1)$

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

Six years before the ratio of the age of Jothi and her daughter = 11: 1

$$(J - 6) / (D - 6) = 11/1$$

$$J - 6 = 11D - 66$$

$$11D - J = 60 \text{ -----} > (2)$$

Equating (1) and (2), we get

$$D = 9$$

$$J = 39$$

The present age of Jothi = 39 years

The present age of her daughter = 9 years

Son was born when she was 35 years old

The present age of her son = 4 years

Age of her daughter after 11 years

$$= 9 + 11$$

$$= 20 \text{ years}$$

When her daughter is at the age of 20 years, the age of her son

$$= 4 + 11$$

$$= 15 \text{ years}$$

Quantity-III:

The difference in the ages of two persons = 11 years

$$\text{Elder} - \text{Younger} = 11 \text{ -----} > (i)$$

Twelve years ago, the Elder one will be twice as old as the Younger one

$$\text{Elder} - 12 = 2 * (\text{Younger} - 12)$$

$$\text{Elder} - 12 = 2 * \text{Younger} - 24$$

$$2 * \text{Younger} - \text{Elder} = 12 \text{ -----} > (ii)$$

Solving (i) and (ii)

$$\text{Younger} = 23$$

$$\text{Elder} = 34$$

Sum of the present age of Elder and Younger

$$= 34 + 23$$

$$= 57$$

100) Answer - C

Quantity-I:

Let the present age of Atul, Raja and Santosh be x, y and z.

$$x/z = 4/5$$

$$x = 4z/5 \text{ --} > (1)$$

$$(y+2)/(z+2) = 7/8$$

$$8y + 16 = 7z + 14$$

$$8y - 7z = -2 \text{ --} > (2)$$

$$x + y = z + 20$$

Substitute (1)

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

$$4z/5 + y = z + 20$$

$$y = z/5 + 20$$

$$5y = z + 100$$

$$5y - z = 100 \rightarrow (3)$$

$$(2) \rightarrow 8y - 7z = -2$$

$$(3) \times 7 \rightarrow 35y - 7z = 700$$

$$27y = 702$$

$$y = 26 \text{ years}$$

The present age of Raja = 26 years

Age of Raja after 4 years = $26 + 4 = 30$ years

Quantity-II:

$$(A + 6)/(B - 4) = 3/2$$

$$2A + 12 = 3B - 12$$

$$2A - 3B = -24 \rightarrow (1)$$

$$(A - 2)/C = 4/5$$

$$5A - 10 = 4C$$

$$5A - 4C = 10 \rightarrow (2)$$

$$B + 4 = C - 10$$

$$B = C - 14 \rightarrow (3)$$

Substitute (3) in (1)

$$2A - 3(C - 14) = -24$$

$$2A - 3C + 42 = -24$$

$$2A - 3C = -66 \rightarrow (4)$$

$$(2) \times 2 \rightarrow 10A - 8C = 20$$

$$(4) \times 5 \rightarrow 10A - 15C = -330$$

$$7C = 350$$

$$C = 50 \text{ years}$$

Present age of C = 50 years

Quantity-III:

Let the age of Karan, Karan's uncle and Karan's father be x, y and z respectively.

$$y + 6 = 3x$$

$$y = 3x - 6 \rightarrow (1)$$

$$z = (3/4) \times (y + 6)$$

$$4z = 3y + 18$$

$$4z - 3y = 18 \rightarrow (2)$$

$$y + z = 99 \rightarrow (3)$$

$$(2) \rightarrow 4z - 3y = 18$$

$$(3) \times 3 \rightarrow 3z + 3y = 297$$

$$7z = 315$$

$$z = 45 \text{ years}$$

Connect with

Kaushik Mohanty on :

Top 100 Problem On Ages

For SBI/IBPS/RBI/ All other Banking Exams

$$y = 99 - 45 = 54 \text{ years}$$

$$3x = y + 6$$

$$3x = 54 + 6$$

$$3x = 60$$

$$x = 20 \text{ years}$$

The present age of Karan = 20 years
