

1. Questions

Study the following information carefully and answer the following questions.

The given bar graph shows the total number of people attending the concert in 10's in five different months namely June, July, August, September and October respectively and also the percentage of the number of males who attended the concert in these five different months.

Note: The total number of people attending the concert = The number of males attending the concert + The number of females attending the concert

The total number of people who attended the concert in May is $(x + 10)\%$ more than that in June. If the total number of people who attended the concert in July and May is 1152, find the value of x .

- a. 36
- b. 40
- c. 38
- d. 45
- e. 32

2. Questions

In October, 40% of the males attended a singing concert, and the rest of them attended a tribute concert. If the ratio of the number of males to females who attended the singing concert is 4:1, then find the number of females who attended the tribute concert.

- a. 88

- b. 90
- c. 72
- d. 92
- e. 50

3. Questions

Find the ratio of the number of males who attended a concert in July to the number of females who attended a concert in August.

- a. 18: 35
- b. 21: 29
- c. 11: 15
- d. 21: 32
- e. 19: 18

4. Questions

The number of females who attended the concert in September is what percentage of the total number of people who attended the concert in July?

- a. 135%
- b. 125%
- c. 140%
- d. 210%
- e. 200%

@RankZen Banker

5. Questions

In June, out of the number of females who attended the concert, the ratio of the number of females who attended a concert in the evening to the morning was 5:3. Find the number of females who attended the concert in the evening.

- a. 145
- b. 215
- c. 210
- d. 225
- e. 175

6. Questions

Study the following information carefully and answer the following questions.

Three shops, A, B, and C, sell two types of items: cups and pans. The number of cups sold in shop B is 20 more than that in shop A, while the number of cups sold in shop C is 8 more than that in shop A. The number of pans sold in shop B is 30% more than the number of cups sold in the same shop. The number of pans sold in shop A is three times the number of cups sold in the same shop. The total number of cups sold by all three shops together is 178. The number of pans sold in shop C is equal to the number of cups sold in shop B.

In shop A, out of the number of cups sold, $\frac{3}{5}$ th are tea cups and the rest of them are measuring cups. If each measuring cup was sold for Rs. 20, then find the total selling price of all measuring cups.

- a. Rs. 880
- b. Rs. 500
- c. Rs. 400
- d. Rs. 280
- e. Rs. 200

7. Questions

In shop C, the ratio of the number of frying pans to sauce pans sold is 3:4. Find the sum of the 20% of the frying pans sold and 60% of the sauce pans sold together.

Note: Shop C sold only frying pans and sauce pans.

@RankZen Banker

- a. 30
- b. 20
- c. 45
- d. 54
- e. 60

8. Questions

The number of pans sold in shop D is $\frac{3}{7}$ th more than that in shop B, and the number of cups sold in shop D is 32 more than the number of pans sold in the same shop. Find the sum of the number of cups and pans sold in shop D.

- a. 324
- b. 292
- c. 218
- d. 345
- e. 415

9. Questions

Find the difference between the total number of cups sold in shops B and C together and the number of pans sold in shop A.

- a. 35
- b. 20
- c. 18
- d. 22
- e. 31

10. Questions

Find the sum of the number of pans sold in shops A and B together and the number of cups sold in shop B.

- a. 320
- b. 245
- c. 198
- d. 311
- e. 415

11. Questions

@RankZen Banker

The time taken by boat to cover a certain distance upstream is 25% more than the time taken by boat to cover the same distance downstream. If the time taken by boat to travel 250 km downstream is 10 hours, then find the upstream speed of the boat.

- a. 16 km/hr
- b. 20 km/hr
- c. 36 km/hr
- d. 32 km/hr
- e. 28 km/hr

12. Questions

The marked price of the watch is Rs. 1200 above its cost price and sold after two successive discounts of 10% and 25%, respectively, but obtained a loss of Rs. 165. Find the marked price of the watch.

- a. Rs. 4500
- b. Rs. 3800
- c. Rs. 5300
- d. Rs. 4200

e. Rs. 3600

13. Questions

Pipes A and B together can fill 50% of a tank in 3 hours, and pipes A, B and C together can fill the same tank in 7.5 hours. If pipe B and C together can fill the tank in 30 hours, find the time taken by pipe A alone to fill the tank. (Pipe C is an outlet pipe).

- a. 20 hours
- b. 15 hours
- c. 30 hours
- d. 10 hours
- e. 6 hours

14. Questions

P and Q entered into a business by investing Rs. 8000 and Rs. 7200, respectively. Both P and Q invested for 12 months and 18 months, respectively. If the difference between the profit share of P and Q is Rs. 6300, then find the profit share of P.

- a. Rs. 18000
- b. Rs. 24300
- c. Rs. 19000
- d. Rs. 21800
- e. Rs. 24500

@RankZen Banker

15. Questions

Ravi invested a certain amount at 12% simple interest per annum for 3 years, and Ramu invested Rs. 3000 in compound interest at the rate of 15% compounded annually for 2 years. If the interest received by both Ravi and Ramu is Rs. 1687.5, then find the amount invested by Ravi.

- a. Rs. 4000
- b. Rs. 6500
- c. Rs. 3000
- d. Rs. 2000
- e. Rs. 5500

16. Questions

A circular wire of radius 28 cm is bent into the shape of a rectangle. If the ratio of the length to the breadth of the rectangle is 7 : 4, find the breadth of the rectangle.

- a. 32 cm

- b. 48 cm
- c. 42 cm
- d. 16 cm
- e. 56 cm

17. Questions

The ratio of the present age of A to B is 3:7 respectively. The ratio of A's age M years ago to the present age of B is 5:14, and the age of A after 2 years is half the present age of B. Find the value of M.

- a. 11
- b. 6
- c. 12
- d. 2
- e. 10

18. Questions

A mixture contains 300 litres of milk and water in the ratio of 2:3, respectively. 25% of the mixture is taken out and replaced with the same quantity of milk. Find the ratio of the final quantity of milk to water.

- a. 15:7
- b. 11:9
- c. 19:17
- d. 21:4
- e. 12:11

19. Questions

A train crosses a pole in 30 seconds and crosses a platform of length x metres in 90 seconds. Find the speed of the train.

- a. 60 m/sec
- b. 30 m/sec
- c. 20 m/sec
- d. None of the above
- e. Cannot be determined

20. Questions

The ratio of the number of fans to tables sold is 6:5, and the ratio of the number of tables to chairs sold is 3:2. If the difference between the number of fans and chairs sold is 72, then find the number of tables sold.

- a. 128
- b. 135
- c. 215
- d. 120
- e. 156

21. Questions

What value should come in the place of (?) in the following questions?

$$\sqrt{(664 - 20 * 26)} + 45\% \text{ of } 200 = ?/2$$

- a. 185
- b. 204
- c. 98
- d. 121
- e. 96

@RankZen Banker

22. Questions

$$(121)^{1/2} * 5 + 55/5 - 11 = ? * 5$$

- a. 8
- b. 11
- c. 13
- d. 5
- e. 2

23. Questions

$$56 * 7/8 - 5^2 + ? * 2 = 70\% \text{ of } 300$$

- a. 56
- b. 91
- c. 86
- d. 93
- e. 45

24. Questions

$$80\% \text{ of } 1200 - 150 * \frac{2}{3} = ?^2 - 101$$

- a. 45
- b. 32
- c. 28
- d. 67
- e. 31

25. Questions

$$4\frac{3}{8} * 1\frac{1}{7} + 304 = ? * 3$$

- a. 103
- b. 96
- c. 145
- d. 141
- e. 35

@RankZen Banker

26. Questions

What approximate value should come in the place of (?) in the following questions.

$$125.12 * 2.05 + 35.12\% \text{ of } 400.12 = ? * 4.98$$

- a. 56
- b. 70
- c. 78
- d. 89
- e. 98

27. Questions

$$25.12\% \text{ of } 800.12 + (225.12 * 2.12^2) = ?$$

- a. 1200
- b. 800
- c. 1500
- d. 1100
- e. 1060

28. Questions

$$(2519.98/8.89)/(64.12)^{1/2} = 110.12 - ?$$

- a. 75
- b. 35
- c. 85
- d. 45
- e. 55

29. Questions

$$24.06 * 11.10 + 21.12^2 = ? - 60.12\% \text{ of } 300.12$$

- a. 725
- b. 885
- c. 912
- d. 1020
- e. 456

30. Questions

$$(2450.12/4.98) * 1.98 = ?/1.98 + 17 * 2.98$$

- a. 2108
- b. 1858
- c. 2156
- d. 1920
- e. 998

31. Questions

What value should come in the place of (?) in the following number series?

?, 171, 242, 299, 377, 427

- a. 107
- b. 125
- c. 98
- d. 76
- e. 85

@RankZen Banker

32. Questions**21, 22, 30, ?, 121, 246**

- a. 40
- b. 39
- c. 57
- d. 46
- e. 52

33. Questions**452, 411, ?, 407, 460, 401**

- a. 454
- b. 389
- c. 425
- d. 402
- e. 388

34. Questions**65, ?, 100, 125, 155, 190**

- a. 45
- b. 80
- c. 72
- d. 75
- e. 30

35. Questions**16, 17, 19, 25, 49, ?**

- a. 121
- b. 58
- c. 93
- d. 169
- e. 100

36. Questions

@RankZen Banker

Find out the wrong number in the following number series.

18, 36, 55, 100, 114, 228

- a. 36
- b. 100
- c. 114
- d. 18
- e. 55

37. Questions

245, 258, 280, 344, 469, 685

- a. 280
- b. 344
- c. 258
- d. 469
- e. 685

38. Questions

40, 62, 92, 134, 190, 262

- a. 92
- b. 62
- c. 190
- d. 40
- e. 262

39. Questions

640, 340, 960, 240, 1200

- a. 340
- b. 640
- c. 960
- d. 240
- e. 1200

40. Questions

@RankZen Banker

13, 29, 78, 390, 2730, 30030

- a. 390
- b. 2730
- c. 78
- d. 29
- e. 13

41. Questions

The following question contains two equations as I and II. You have to solve both equations and determine the relationship between them and give answer.

i). $x^2 - 23x + 120 = 0$

ii). $y^2 - 32y + 255 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or a relationship cannot be established
- d. $x < y$
- e. $x \leq y$

@RankZen Banker

42. Questions

i). $x^2 + 25x + 156 = 0$

ii). $y^2 + 8y + 12 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or a relationship cannot be established
- d. $x < y$
- e. $x \leq y$

43. Questions

i). $x^2 - 6x - 216 = 0$

ii). $y^2 - 5y - 234 = 0$

- a. $x > y$
- b. $x \geq y$

- c. $x = y$ or a relationship cannot be established
- d. $x < y$
- e. $x \leq y$

44. Questions

i). $20x^2 = 1620$

ii). $y^2 + 11y + 28 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or a relationship cannot be established
- d. $x < y$
- e. $x \leq y$

45. Questions

i). $x^2 - 24x + 128 = 0$

ii). $y^2 - 6y + 9 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or a relationship cannot be established
- d. $x < y$
- e. $x \leq y$

@RankZen Banker

Explanations:

1. Questions

In June:

The total number of people who attended the concert = 600

The number of males who attended the concert = $600 * 40/100 = 240$

The number of females who attended the concert = $600 * 60/100 = 360$

In July:

The total number of people who attended the concert = 300

The number of males who attended the concert = $300 * 60/100 = 180$

The number of females who attended the concert = $300 * 40/100 = 120$

In August:

The total number of people who attended the concert = 500

The number of males who attended the concert = $500 * 30/100 = 150$

The number of females who attended the concert = $500 * 70/100 = 350$

In September:

The total number of people who attended the concert = 700

The number of males who attended the concert = $700 * 40/100 = 280$

The number of females who attended the concert = $700 * 60/100 = 420$

In October:

The total number of people who attended the concert = 400

The number of males who attended the concert = $400 * 70/100 = 280$

The number of females who attended the concert = $400 * 30/100 = 120$

Month	The total number of people who attended the concert	The number of males who attended the concert	The number of females who attended the concert
June	600	240	360
July	300	180	120
August	500	150	350
September	700	280	420
October	400	280	120

@RankZen Banker

Answer: E

The total number of people who attended the concert in May = $(1152 - 300) = 852$

$$852 = [600 * (100 + x + 10)/100]$$

$$142 = (110 + x)$$

$$x = 32$$

Hence, the correct answer is option E

2. Questions

In June:

The total number of people who attended the concert = 600

The number of males who attended the concert = $600 * 40/100 = 240$

The number of females who attended the concert = $600 * 60/100 = 360$

In July:

The total number of people who attended the concert = 300

The number of males who attended the concert = $300 * 60/100 = 180$

The number of females who attended the concert = $300 * 40/100 = 120$

In August:

The total number of people who attended the concert = 500

The number of males who attended the concert = $500 * 30/100 = 150$

The number of females who attended the concert = $500 * 70/100 = 350$

In September:

The total number of people who attended the concert = 700

The number of males who attended the concert = $700 * 40/100 = 280$

The number of females who attended the concert = $700 * 60/100 = 420$ @RankZen Banker

In October:

The total number of people who attended the concert = 400

The number of males who attended the concert = $400 * 70/100 = 280$

The number of females who attended the concert = $400 * 30/100 = 120$

Month	The total number of people who attended the concert	The number of males who attended the concert	The number of females who attended the concert
June	600	240	360
July	300	180	120
August	500	150	350
September	700	280	420
October	400	280	120

Answer: D

The number of males who attended a singing concert in October = $[280 * 40/100] = 112$

The number of females who attended a singing concert in October = $(112 * 1/4) = 28$

The number of females who attended a tribute concert in October = $120 - 28 = 92$

Hence, the correct answer is option D

3. Questions

In June:

The total number of people who attended the concert = 600

The number of males who attended the concert = $600 * 40/100 = 240$

The number of females who attended the concert = $600 * 60/100 = 360$

In July:

The total number of people who attended the concert = 300

The number of males who attended the concert = $300 * 60/100 = 180$

The number of females who attended the concert = $300 * 40/100 = 120$

In August:

The total number of people who attended the concert = 500

The number of males who attended the concert = $500 * 30/100 = 150$

The number of females who attended the concert = $500 * 70/100 = 350$

In September:

The total number of people who attended the concert = 700

The number of males who attended the concert = $700 * 40/100 = 280$

The number of females who attended the concert = $700 * 60/100 = 420$

In October:

The total number of people who attended the concert = 400

The number of males who attended the concert = $400 * 70/100 = 280$

The number of females who attended the concert = $400 * 30/100 = 120$

@RankZen Banker

Month	The total number of people who attended the concert	The number of males who attended the concert	The number of females who attended the concert
June	600	240	360
July	300	180	120
August	500	150	350
September	700	280	420
October	400	280	120

Answer: A

The number of males who attended a concert in July = 180

The number of females who attended a concert in August = 350

Required ratio = 180: 350 = 18: 35

Hence, the correct answer is option A

@RankZen Banker

4. Questions

In June:

The total number of people who attended the concert = 600

The number of males who attended the concert = $600 \times \frac{40}{100} = 240$

The number of females who attended the concert = $600 \times \frac{60}{100} = 360$

In July:

The total number of people who attended the concert = 300

The number of males who attended the concert = $300 \times \frac{60}{100} = 180$

The number of females who attended the concert = $300 \times \frac{40}{100} = 120$

In August:

The total number of people who attended the concert = 500

The number of males who attended the concert = $500 \times \frac{30}{100} = 150$

The number of females who attended the concert = $500 \times \frac{70}{100} = 350$

In September:

The total number of people who attended the concert = 700

The number of males who attended the concert = $700 * 40/100 = 280$

The number of females who attended the concert = $700 * 60/100 = 420$

In October:

The total number of people who attended the concert = 400

The number of males who attended the concert = $400 * 70/100 = 280$

The number of females who attended the concert = $400 * 30/100 = 120$

Month	The total number of people who attended the concert	The number of males who attended the concert	The number of females who attended the concert
June	600	240	360
July	300	180	120
August	500	150	350
September	700	280	420
October	400	280	120

@RankZen Banker

Answer: C

The number of females who attended the concert in September = 420

The total number of people who attended the concert in July = 300

Required percentage = $[420/300 * 100] = 140\%$

Hence, the correct answer is option C

5. Questions

In June:

The total number of people who attended the concert = 600

The number of males who attended the concert = $600 * 40/100 = 240$

The number of females who attended the concert = $600 * 60/100 = 360$

In July:

The total number of people who attended the concert = 300

The number of males who attended the concert = $300 * 60/100 = 180$

The number of females who attended the concert = $300 * 40/100 = 120$

In August:

The total number of people who attended the concert = 500

The number of males who attended the concert = $500 * 30/100 = 150$

The number of females who attended the concert = $500 * 70/100 = 350$

In September:

The total number of people who attended the concert = 700

The number of males who attended the concert = $700 * 40/100 = 280$

The number of females who attended the concert = $700 * 60/100 = 420$

In October:

The total number of people who attended the concert = 400

The number of males who attended the concert = $400 * 70/100 = 280$

The number of females who attended the concert = $400 * 30/100 = 120$

Month	The total number of people who attended the concert	The number of males who attended the concert	The number of females who attended the concert
June	600	240	360
July	300	180	120
August	500	150	350
September	700	280	420
October	400	280	120

@RankZen Banker

Answer: D

The number of females who attended the concert in June = 360

The number of females who attended the concert in evening in June = $[360 * (5/8)] = 225$

Hence, the correct answer is option D

6. Questions

Let, the number of cups sold in shop A = x

The number of cups sold in shop B = (x + 20)

The number of cups sold in shop C = $(x + 8)$

$$x + x + 20 + x + 8 = 178$$

$$3x + 28 = 178$$

$$3x = 150$$

$$x = 50$$

The number of cups sold in shop A = 50

The number of pans sold in shop A = $50 * 3 = 150$

The number of cups sold in shop B = $50 + 20 = 70$

The number of pans sold in shop B = $[70 * (130/100)] = 91$

The number of cups sold in shop C = $50 + 8 = 58$

The number of pans sold in shop C = 70

Shop	The number of cups sold	The number of pans sold
A	50	150
B	70	91
C	58	70

@RankZen Banker

Answer: C

The number of cups sold in shop A = 50

The number of measuring cups sold in shop A = $[50 * (2/5)] = 20$

The total selling price of all measuring cups = $20 * 20 = \text{Rs. } 400$

Hence, the correct answer is option C

7. Questions

Let, the number of cups sold in shop A = x

The number of cups sold in shop B = $(x + 20)$

The number of cups sold in shop C = $(x + 8)$

$$x + x + 20 + x + 8 = 178$$

$$3x + 28 = 178$$

$$3x = 150$$

$$x = 50$$

The number of cups sold in shop A = 50

The number of pans sold in shop A = $50 * 3 = 150$

The number of cups sold in shop B = $50 + 20 = 70$

The number of pans sold in shop B = $[70 * (130/100)] = 91$

The number of cups sold in shop C = $50 + 8 = 58$

The number of pans sold in shop C = 70

Shop	The number of cups sold	The number of pans sold
A	50	150
B	70	91
C	58	70

Answer: A

The number of frying pans sold in shop C = $70 * 3/7 = 30$

The number of sauce pans sold in shop C = $70 * 4/7 = 40$

Required sum = $[(30 * (20/100))] + [40 * (60/100)] = 6 + 24 = 30$

Hence, the correct answer is option A

8. Questions

Let, the number of cups sold in shop A = x

The number of cups sold in shop B = $(x + 20)$

The number of cups sold in shop C = $(x + 8)$

$$x + x + 20 + x + 8 = 178$$

$$3x + 28 = 178$$

$$3x = 150$$

$$x = 50$$

The number of cups sold in shop A = 50

The number of pans sold in shop A = $50 * 3 = 150$

The number of cups sold in shop B = $50 + 20 = 70$

The number of pans sold in shop B = $[70 * (130/100)] = 91$

The number of cups sold in shop C = $50 + 8 = 58$

@RankZen Banker

The number of pans sold in shop C = 70

Shop	The number of cups sold	The number of pans sold
A	50	150
B	70	91
C	58	70

Answer: B

The number of pans sold in shop D = $91 + [91 * (3/7)] = (91 + 39) = 130$

The number of cups sold in shop D = $(130 + 32) = 162$

Required sum = $(130 + 162) = 292$

Hence, the correct answer is option B

9. Questions

Let, the number of cups sold in shop A = x

The number of cups sold in shop B = $(x + 20)$

The number of cups sold in shop C = $(x + 8)$

$$x + x + 20 + x + 8 = 178$$

$$3x + 28 = 178$$

$$3x = 150$$

$$x = 50$$

The number of cups sold in shop A = 50

The number of pans sold in shop A = $50 * 3 = 150$

The number of cups sold in shop B = $50 + 20 = 70$

The number of pans sold in shop B = $[70 * (130/100)] = 91$

The number of cups sold in shop C = $50 + 8 = 58$

The number of pans sold in shop C = 70

@RankZen Banker

Shop	The number of cups sold	The number of pans sold
A	50	150
B	70	91
C	58	70

Answer: D

The total number of cups sold in shop B and C together = $(70 + 58) = 128$

The number of pans sold in shop A = 150

Required difference = $(150 - 128) = 22$

Hence, the correct answer is option D

10. Questions

Let, the number of cups sold in shop A = x

The number of cups sold in shop B = $(x + 20)$

The number of cups sold in shop C = $(x + 8)$

$$x + x + 20 + x + 8 = 178$$

$$3x + 28 = 178$$

$$3x = 150$$

$$x = 50$$

The number of cups sold in shop A = 50

The number of pans sold in shop A = $50 * 3 = 150$

The number of cups sold in shop B = $50 + 20 = 70$

The number of pans sold in shop B = $[70 * (130/100)] = 91$

The number of cups sold in shop C = $50 + 8 = 58$

The number of pans sold in shop C = 70

@RankZen Banker

Shop	The number of cups sold	The number of pans sold
A	50	150
B	70	91
C	58	70

Answer: D

The sum of the number of pans sold in shop A and B together = $(150 + 91) = 241$

The number of cups sold in shop B = 70

Required sum = $(241 + 70) = 311$

Hence, the correct answer is option D

11. Questions

Answer: B

Let, the distance = D km

$(D/\text{upstream speed}) = [(125/100) * (D/\text{downstream speed})]$

$(\text{Downstream speed}/\text{Upstream speed}) = 5/4$

Let, the downstream speed and upstream speed of the boat be 5x km/hr and 4x km/hr respectively.

$$5x = 250/10$$

$$5x = 25$$

$$x = 5$$

The upstream speed of the boat = $4 * 5 = 20$ km/hr

Hence, the correct answer is option B

12. Questions

Answer: D

Let, the cost price of the watch = Rs. x

The marked price of the watch = Rs. $(x + 1200)$

$$[(x + 1200) * 90/100 * 75/100] = (x - 165)$$

$$27x + 32400 = 40x - 6600$$

$$13x = 39000$$

$$x = 3000$$

@RankZen Banker

The marked price of the watch = $3000 + 1200 = \text{Rs. } 4200$

Hence, the correct answer is option D

13. Questions

Answer: D

$$1/A + 1/B = 1/6$$

$$1/A + 1/B - 1/C = 1/7.5$$

$$1/6 - 1/C = 1/7.5$$

$$1/C = 1/6 - 1/7.5$$

$$1/C = 1.5/45$$

$$1/C = 1/30$$

$$1/B - 1/C = 1/30$$

$$1/B = 1/30 + 1/30$$

$$1/B = 1/15$$

$$1/A = 1/6 - 1/15$$

$$1/A = 9/90$$

$$1/A = 1/10$$

@RankZen Banker

OR

The time taken by pipe C to empty the tank = $(1/7.5) - (1/6) = (4 - 5)/30 = -1/30$

The time taken by pipe B alone to fill the tank = $(1/30) + (1/30) = 2/30 = 1/15$

The time taken by A alone to fill the tank = $(1/6) - (1/15) = 1/10$

The time taken by pipe A alone to fill the tank in 10 hours

Hence, the correct answer is option D

14. Questions

Answer: A

The ratio of the profit share of P to Q = $(8000 * 12) : (7200 * 18)$

$$= (10 * 2) : (9 * 3)$$

$$= 20 : 27$$

Let, the profit share of Q and P be $27x$ and $20x$ respectively.

$$27x - 20x = 6300$$

$$7x = 6300$$

$$x = 900$$

The profit share of P = $20 * 900 = \text{Rs. } 18000$

Hence, the correct answer is option A

15. Questions

Answer: D

Let, the amount invested in simple interest = Rs. x

$$SI = PNR/100$$

$$SI = [x * 12 * 3/100]$$

$$SI = \text{Rs. } 0.36x$$

$$CI = [P * (1 + R/100)^n - P]$$

$$CI = 3000 * 1.15 * 1.15 - 3000$$

$$CI = \text{Rs. } 967.5$$

$$1687.5 = 967.5 + 0.36x$$

$$720 = 0.36x$$

$$x = 2000$$

The amount invested by Ravi = Rs. 2000

Hence, the correct answer is option D

16. Questions

Answer: A

As per the given data,

$$\text{Circumference of the circle} = 2\pi r = 2 * (22/7) * 28 = 176 \text{ cm}$$

$$\text{Perimeter of the rectangle} = 2(l + b)$$

$$\text{Here, } l : b = 7 : 4$$

Let the sides be 7x and 4x

$$176 = 2(7x + 4x)$$

$$88 = 11x$$

$$x = 8$$

$$\text{The breadth of the rectangle side} = 4x = 4 * 8 = 32 \text{ cm}$$

Hence, the correct answer is option A.

17. Questions

Answer: D

Let, the present age of A and B be 3x years and 7x years respectively.

@RankZen Banker

$$(3x + 2) = 7x/2$$

$$3x + 2 = 3.5x$$

$$0.5x = 2$$

$$x = 4$$

The present age of A = $3 * 4 = 12$ years

The present age of B = $7 * 4 = 28$ years

$$[(12 - M)/(28)] = 5/14$$

$$12 - M = 10$$

$$M = 2$$

Hence, the correct answer is option D

18. Questions

Answer: B

According to the question,

The initial quantity of milk in the mixture = $[300 * 2/(2 + 3)] = 120$ litres

The initial quantity of water in the mixture = $300 * 3/5 = 180$ litres

25% of the mixture to be removed = $300 * 25/100 = 75$ litres

@RankZen Banker

The quantity of milk left in the mixture after 25% of the mixture is removed = $120 - [75 * (2/5)]$

$$= 120 - 30$$

$$= 90 \text{ litres}$$

The quantity of water left in the mixture after 25% of the mixture is removed = $180 - [75 * (3/5)]$

$$= 180 - 45$$

$$= 135 \text{ litres}$$

The ratio of the final quantity of milk to water = $(90 + 75): 135 = 165: 135 = 11:9$

Hence, the correct answer is option B

19. Questions

Answer: E

Let, the length of the train = l m

The speed of the train = s m/sec

$$l = s * 30$$

$$l = 30s$$

and

$$(1 + x) = s * 90$$

$$30s + x = 90s$$

$$x = 60s$$

$$s = x/60$$

We cannot find the speed of the train using the given data.

So, cannot be determined.

Hence, the correct answer is option E

20. Questions

Answer: B

The ratio of the number of fans, tables to chairs sold = 18: 15: 10

Let, the number of fans, tables and chairs sold be 18x, 15x and 10x respectively.

$$18x - 10x = 72$$

$$8x = 72$$

$$x = 9$$

The number of tables sold = 15 * 9 = 135

Hence, the correct answer is option B

21. Questions

Answer: B

$$\sqrt{(664 - 20 * 26) + 45\% \text{ of } 200} = ?/2$$

$$\sqrt{(664 - 520) + 90} = ?/2$$

$$\sqrt{144 + 90} = ?/2$$

$$12 + 90 = ?/2$$

$$102 = ?/2$$

$$? = 204$$

Hence, the correct answer is option B

22. Questions

Answer: B

$$(121)^{1/2} * 5 + 55/5 - 11 = ? * 5$$

$$11 * 5 + 11 - 11 = ? * 5$$

$$55 = ? * 5$$

$$? = 11$$

@RankZen Banker

Hence, the correct answer is option B

23. Questions

Answer: D

$$56 * 7/8 - 5^2 + ? * 2 = 70\% \text{ of } 300$$

$$7 * 7 - 25 + ? * 2 = 210$$

$$49 - 25 + ? * 2 = 210$$

$$24 + ? * 2 = 210$$

$$? * 2 = 186$$

$$? = 93$$

Hence, the correct answer is option D

24. Questions

Answer: E

$$80\% \text{ of } 1200 - 150 * 2/3 = ?^2 - 101$$

$$960 - 100 = ?^2 - 101$$

$$?^2 = 961$$

$$? = 31$$

Hence, the correct answer is option E

25. Questions

Answer: A

$$4\frac{3}{8} * 1\frac{1}{7} + 304 = ? * 3$$

$$[(35/8) * (8/7)] + 304 = ? * 3$$

$$5 + 304 = ? * 3$$

$$309 = ? * 3$$

$$? = 103$$

Hence, the correct answer is option A

26. Questions

Answer: C

$$125.12 * 2.05 + 35.12\% \text{ of } 400.12 = ? * 4.98$$

$$125 * 2 + 35\% \text{ of } 400 = ? * 5$$

@RankZen Banker

$$250 + 140 = ? * 5$$

$$390/5 = ?$$

$$? = 78$$

Hence, the correct answer is option C

27. Questions

Answer: D

$$25.12\% \text{ of } 800.12 + (225.12 * 2.12^2) = ?$$

$$25\% \text{ of } 800 + (225 * 4) = ?$$

$$200 + 900 = ?$$

$$? = 1100$$

Hence, the correct answer is option D

28. Questions

Answer: A

$$(2519.98/8.89)/(64.12)^{1/2} = 110.12 - ?$$

$$(2520/9)/(64)^{1/2} = 110.12 - ?$$

$$280/8 = 110 - ?$$

$$? = 110 - 35$$

$$? = 75$$

Hence, the correct answer is option A

29. Questions

Answer: B

$$24.06 * 11.10 + 21.12^2 = ? - 60.12\% \text{ of } 300.12$$

$$24 * 11 + 21^2 = ? - 60\% \text{ of } 300$$

$$264 + 441 = ? - 180$$

$$? = 885$$

Hence, the correct answer is option B

30. Questions

Answer: B

$$(2450.12/4.98) * 1.98 = ?/1.98 + 17 * 2.98$$

$$[(2450/5) * 2] = (?/2) + 17 * 3$$

@RankZen Banker

$$980 = (?/2) + 51$$

$$929 * 2 = ?$$

$$? = 1858$$

Hence, the correct answer is option B

31. Questions

Answer: A

107	171	242	299	377	427
64	71	57	78	50	
	+7	-14	+ 21	-28	

Hence, the correct answer is option A

32. Questions

Answer: C

$$21 + 1^3 = 22$$

$$22 + 2^3 = 30$$

$$30 + 3^3 = \mathbf{57}$$

$$57 + 4^3 = 121$$

$$121 + 5^3 = 246$$

Hence, the correct answer is option C

33. Questions

Answer: A

$$452 - 41 = 411$$

$$411 + 43 = \mathbf{454}$$

$$454 - 47 = 407$$

$$407 + 53 = 460$$

$$460 - 59 = 401$$

Hence, the correct answer is option A

34. Questions

Answer: B

65	80	100	125	155	190
15	20	25	30	35	

@RankZen Banker

Hence, the correct answer is option B

35. Questions

Answer: D

$$16 + 1! = 17$$

$$17 + 2! = 19$$

$$19 + 3! = 25$$

$$25 + 4! = 49$$

$$49 + 5! = 169$$

(or)

16	17	19	25	49	169
1	2	6	24	120	
	*2	*3	*4	*5	

Hence, the correct answer is option D

36. Questions

Answer: E

$$18 * 2 = 36$$

$$36 + 14 = \mathbf{50}$$

$$50 * 2 = 100$$

$$100 + 14 = 114$$

$$114 * 2 = 228$$

Hence, the correct answer is option E

37. Questions

Answer: C

$$245 + 2^3 = \mathbf{253}$$

$$253 + 3^3 = 280$$

$$280 + 4^3 = 344$$

$$344 + 5^3 = 469$$

$$469 + 6^3 = 685$$

Hence, the correct answer is option C

38. Questions

@RankZen Banker

Answer: D

$$42 + (4 * 5) = 62$$

$$62 + (5 * 6) = 92$$

$$92 + (6 * 7) = 134$$

$$134 + (7 * 8) = 190$$

$$190 + (8 * 9) = 262$$

Or

42	62	92	134	190	262
20	30	42	56	72	
10	12	14	16		

Hence, the correct answer is option D

39. Questions

Answer: A

$$640/2 = 320$$

$$320 * 3 = 960$$

$$960/4 = 240$$

$$240 * 5 = 1200$$

Hence, the correct answer is option A

40. Questions

Answer: D

$$13 * 2 = 26$$

$$26 * 3 = 78$$

$$78 * 5 = 390$$

$$390 * 7 = 2730$$

$$2730 * 11 = 30030$$

Hence, the correct answer is option D

41. Questions

Answer: E

$$i). x^2 - 23x + 120 = 0$$

$$x^2 - 15x - 8x + 120 = 0$$

$$x(x - 15) - 8(x - 15) = 0$$

@RankZen Banker

$$(x - 15)(x - 8) = 0$$

$$x = 15, 8$$

$$\text{ii). } y^2 - 32y + 255 = 0$$

$$y^2 - 15y - 17y + 255 = 0$$

$$y(y - 15) - 17(y - 15) = 0$$

$$(y - 15)(y - 17) = 0$$

$$y = 15, 17$$

Thus, $x \leq y$

Hence, the correct answer is option E

42. Questions

Answer: D

$$\text{i). } x^2 + 25x + 156 = 0$$

$$x^2 + 13x + 12x + 156 = 0$$

$$x(x + 13) + 12(x + 13) = 0$$

$$(x + 13)(x + 12) = 0$$

$$x = -13, -12$$

$$\text{ii). } y^2 + 8y + 12 = 0$$

$$y^2 + 6y + 2y + 12 = 0$$

$$y(y + 6) + 2(y + 6) = 0$$

$$(y + 6)(y + 2) = 0$$

$$y = -6, -2$$

Thus, $x < y$

Hence, the correct answer is option D

43. Questions

Answer: C

$$\text{i). } x^2 - 6x - 216 = 0$$

$$x^2 - 18x + 12x - 216 = 0$$

$$x(x - 18) + 12(x - 18) = 0$$

$$(x - 18)(x + 12) = 0$$

@RankZen Banker

$$x = 18, -12$$

$$\text{ii). } y^2 - 5y - 234 = 0$$

$$y^2 - 18y + 13y - 234 = 0$$

$$y(y - 18) + 13(y - 18) = 0$$

$$(y - 18)(y + 13) = 0$$

$$y = 18, -13$$

Thus, $x = y$ or relationship cannot be established

Hence, the correct answer is option C

44. Questions

Answer: C

$$\text{i). } 20x^2 = 1620$$

$$x^2 = 81$$

$$x = 9, -9$$

$$\text{ii). } y^2 + 11y + 28 = 0$$

$$y^2 + 7y + 4y + 28 = 0$$

$$y(y + 7) + 4(y + 7) = 0$$

$$(y + 7)(y + 4) = 0$$

$$y = -7, -4$$

Thus, the relationship cannot be established

Hence, the correct answer is option C

45. Questions

Answer: A

$$\text{i). } x^2 - 24x + 128 = 0$$

$$x^2 - 16x - 8x + 128 = 0$$

$$x(x - 16) - 8(x - 16) = 0$$

$$(x - 16)(x - 8) = 0$$

$$x = 16, 8$$

$$\text{ii). } y^2 - 6y + 9 = 0$$

$$y^2 - 3y - 3y + 9 = 0$$

@RankZen Banker

$$y(y - 3) - 3(y - 3) = 0$$

$$(y - 3)(y - 3) = 0$$

$$y = 3, 3$$

Thus, $x > y$

Hence, the correct answer is option A

@RankZen Banker
