

1. Questions

Study the following information carefully and answer the following questions.

The given table chart shows the total number of cars (Alto + Ford) sold on five different days namely Monday, Tuesday, Wednesday, Thursday and Friday respectively and also the percentage of the number of Ford cars sold (or) number of Ford cars sold and the percentage of the number of Alto cars sold (or) number of Alto cars sold on these five days.

Days	The total number of cars sold	Percentage of the number of Ford cars sold (or) number of Ford cars sold	Percentage of the number of Alto cars sold (or) number of Alto cars sold
Monday	----	---	55%
Tuesday	----	35%	----
Wednesday	----	----	720
Thursday	2400	1400	----
Friday	3200	----	----

If the number of Alto cars sold on Thursday is the same as that on Friday and the number of Ford cars sold on Wednesday is 1000 less than that on Friday, then find the total number of cars sold on Wednesday.

- 1920
- 1880
- 1750
- 2180
- 1000

2. Questions

If the number of Alto cars sold on Tuesday is 1950, then find the total number of Ford cars sold on Tuesday.

@RankZen Banker

- 1050
- 980
- 720
- 880
- 1200

3. Questions

If the total number of cars sold on Monday is 800 more than that on Friday, then find the number of Ford cars sold on Monday.

- a. 1100
- b. 2450
- c. 1200
- d. 1800
- e. 1500

4. Questions

If the percentage of the number of Ford cars sold on Wednesday is 20%, then find the total number of cars sold on Wednesday.

- a. 880
- b. 900
- c. 1200
- d. 800
- e. 150

5. Questions

If the total number of Alto cars sold on Wednesday, Thursday and Friday together is 3820, then find the number of Ford cars sold on Friday.

- a. 1100
- b. 880
- c. 2100
- d. 2400
- e. 1800

6. Questions

@RankZen Banker

Study the following information carefully and answer the following questions.

The given pie chart shows the percentage distribution of the total number of staff working or the number of staff working in five different offices, namely A, B, C, D, and E, respectively.

Note: the total number of staff working in each office = The number of managers working in each office + The number of clerks working in each office

The percentage distribution of the total number of staff working or the number of staff working in five different offices

The number of clerks working in office B is 24 more than the number of managers in office B. If the sum of the number of clerks working in offices B and C together is 420, then find the sum of the number of managers working in offices B and C together.

- a. 424
- b. 488
- c. 620
- d. 588
- e. 512

7. Questions

The total number of staff working in office F is 30% more than that of office D and the ratio of the number of clerks to managers working in office F is 5:3. Find the number of clerks working in office F.

- a. 210
- b. 198
- c. 215
- d. 190
- e. 195

@RankZen Banker

8. Questions

Find the sum of the number of staff working in offices B, C and D together.

- a. 1331
- b. 1248

- c. 998
- d. 1250
- e. 880

9. Questions

Out of the total number of staff working in office B, $\frac{1}{6}$ are clerks, and the rest of them are managers. If the ratio of the number of males to female managers working in office B is 3:1, then find the number of female managers working in office B.

- a. 150
- b. 420
- c. 180
- d. 130
- e. 80

10. Questions

In office D, out of the total number of staff working, 40% are males and the rest of them are females. Find the number of female staff working.

- a. 152
- b. 201
- c. 156
- d. 144
- e. 245

11. Questions

The radius and height of the cylinder are 14 m and 5 m, respectively. The volume of the cuboid is 25% more than that of the cylinder. If the height and breadth of the cuboid are 14 m and 10 m, respectively, then find the length of the cuboid.

- a. 50 m
- b. 42.5 m
- c. 28.8 m
- d. 27.5 m
- e. 19 m

@RankZen Banker

12. Questions

The speed of the boat in still water is 6 times that of the stream. The time taken by the boat to cover

$(2x + 50)$ km downstream is 25% more than the time taken by the boat to cover $(2x - 100)$ km upstream. Find the value of x .

- a. 215
- b. 210
- c. 150
- d. 221
- e. 200

13. Questions

The number of students in class A is 25% more than that of class B. If 24 students join in each class, then the ratio of the number of students in classes A to B becomes 7:6. If the number of students in class C is the average number of students in classes A and B initially. Find the number of students in class C.

- a. 36
- b. 80
- c. 54
- d. 42
- e. None of these

14. Questions

A and B entered into a business by investing Rs. 350 and Rs. $2x$, respectively. After 2 months, A increased his investment by Rs. 100 and B increased his investment by 125%. After another 6 months, B left the business. At the end of one year, the ratio of the profit share of A to B is 52:31. Find the value of x .

- a. 100
- b. 420
- c. 250
- d. 450
- e. 200

@RankZen Banker

15. Questions

The average present age of A, B, C, and D together is 31.5 years. B's age after five years will be equal to C's age after 17 years, and the age of C is 60% that of B. The present age of D is twice the present age of C. Find the present age of A.

- a. 25 years
- b. 35 years

- c. 21 years
- d. 42 years
- e. 28 years

16. Questions

The marked price of the article is 45% above its cost price and sold for two successive discounts of 20% and Rs. 184, respectively. If the cost price of the article is Rs. 2400, then find the selling price of the article.

- a. Rs. 4415
- b. Rs. 2600
- c. Rs. 3410
- d. Rs. 2880
- e. Rs. 3245

17. Questions

Rs. 15000 is invested in compound interest at the rate of 20% per annum for 2 years. If Rs. P is invested in simple interest at the rate of 10% per annum for 5 years, then the simple interest received is 25% more than the compound interest received. Find the value of P.

- a. 21200
- b. 10500
- c. 12200
- d. 16500
- e. 14200

18. Questions

The ratio of two numbers is 11:5. If the second number is increased by 20, then the difference between both numbers becomes 100. If the smaller number is increased by 25, then find the resulting value.

@RankZen Banker

- a. 85
- b. 125
- c. 315
- d. 300
- e. 285

19. Questions

The time taken by the train to cross a man running in the same direction at a speed of 2 m/sec is 10% more than the time taken by the same train to cross a pole. If the train crosses a 140 m long platform in 20 seconds, then find the length of the train.

- a. 480 m
- b. 320 m
- c. 300 m
- d. 560 m
- e. 260 m

20. Questions

Pipe X can fill a tank in 20 hours. Pipe Y is an inlet pipe and is 25% more efficient than Pipe X, while Pipe Z is an outlet pipe that can empty the tank in 12 hours. If all three pipes are opened simultaneously, find the time taken to fill the tank completely.

- a. $(220/7)$ hours
- b. $(240/7)$ hours
- c. $(150/7)$ hours
- d. $(100/7)$ hours
- e. $(120/7)$ hours

21. Questions

What value should come in the place of (?) in the following questions?

30% of $(144 + 6) + 17 * 20 = 5 * ? - 20 * 3$

- a. 89
- b. 48
- c. 34
- d. 49
- e. 28

@RankZen Banker

22. Questions

$32^{(6/10)} * 9 + (32 + 48) * 4 = ?^2 * 2$

- a. 15
- b. 14
- c. 22
- d. 25

e. 34

23. Questions

$$(21 * 6 * 12 / 8) + 40 = ? * 4 - (1331)^{1/3}$$

- a. 63
- b. 79
- c. 45
- d. 85
- e. 60

24. Questions

$$20\% \text{ of } 1250 + 81 + (2744)^{1/3} = ? * (25)^{1/2}$$

- a. 56
- b. 69
- c. 75
- d. 84
- e. 66

25. Questions

$$32\% \text{ of } 600 + 20\% \text{ of } 420 = 3 * ? - (144)^{1/2}$$

- a. 85
- b. 72
- c. 56
- d. 96
- e. 80

@RankZen Banker

26. Questions

What approximate value should come in the place of (?) in the following questions?

$$(29.9 * 7 + 179.98) / \sqrt{169} = ? * 40.12 / 760$$

- a. 510
- b. 570
- c. 430
- d. 490

e. 620

27. Questions

$$((13/3) + (37/7)) * 126.12/101.01 = ? - \sqrt{121} * 1.98^3$$

- a. 150
- b. 140
- c. 210
- d. 190
- e. 100

28. Questions

$$(344.12 - 40.92 * 4) = ? * 114.98 / 23.10$$

- a. 36
- b. 18
- c. 72
- d. 45
- e. 9

29. Questions

$$25.12\% \text{ of } 799.98 - \sqrt{225} * 7.98 = ? - 21.85 * 4$$

- a. 154
- b. 118
- c. 168
- d. 190
- e. 134

30. Questions

$$12.01 * 28\% \text{ of } (971.12 + 529.01) - 40 = ? * 5^2$$

- a. 180
- b. 270
- c. 340
- d. 200
- e. 380

@RankZen Banker

31. Questions

What value should come in the place of (?) in the following number series?

20, 52, 132, 332, ?, 2082

- a. 832
- b. 765
- c. 615
- d. 829
- e. 345

32. Questions

?, 30, 43, 60, 79, 102

- a. 19
- b. 22
- c. 35
- d. 39
- e. 41

33. Questions

?, 210, 259, 284, 293, 297

- a. 86
- b. 75
- c. 89
- d. 92
- e. 95

34. Questions

26, 87, 16, 97, ?

- a. 6
- b. 81
- c. 12
- d. 15
- e. 88

@RankZen Banker

35. Questions

2, ?, 70, 630, 6930

- a. 12
- b. 19
- c. 6
- d. 8
- e. 10

36. Questions

Find out the wrong number in the following number series.

10, 28, 40, 59, 82, 111

- a. 40
- b. 82
- c. 111
- d. 28
- e. 59

37. Questions

6, 8, 18, 20, 36, 68

- a. 68
- b. 20
- c. 18
- d. 6
- e. 36

38. Questions

480, 96, 24, 8, 4, 2

- a. 480
- b. 24
- c. 8
- d. 4
- e. 2

@RankZen Banker

39. Questions**10, 30, 150, 1050, 9455**

- a. 9455
- b. 30
- c. 150
- d. 10
- e. 1050

40. Questions**1250, 1231, 1208, 1179, 1150, 1111**

- a. 1250
- b. 1150
- c. 1208
- d. 1231
- e. 1111

41. Questions

The following question contains two equations, I and II. You have to solve both equations and determine the relationship between them and give answer.

i). $x^2 - 27x + 182 = 0$

ii). $y^2 - 18y + 80 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or relationship cannot be established.
- d. $x < y$
- e. $x \leq y$

@RankZen Banker

42. Questions

i). $2x^2 - 7x + 6 = 0$

ii). $y^2 - 23y + 132 = 0$

- a. $x > y$
- b. $x \geq y$

- c. $x = y$ or relationship cannot be established.
- d. $x < y$
- e. $x \leq y$

43. Questions

i). $x^2 - 43x + 442 = 0$

ii). $y^2 + 26y + 169 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or relationship cannot be established.
- d. $x < y$
- e. $x \leq y$

44. Questions

i). $x^2 - 3x - 40 = 0$

ii). $y^2 - 34y + 285 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or relationship cannot be established.
- d. $x < y$
- e. $x \leq y$

45. Questions

i). $x^2 - 14x + 48 = 0$

ii). $y^2 - 10y + 21 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or relationship cannot be established.
- d. $x < y$
- e. $x \leq y$

@RankZen Banker

Explanations:

1. Questions

Answer: A

The number of Alto cars sold on Thursday = $(2400 - 1400) = 1000$

The number of Alto cars sold on Friday = 1000

The number of Ford cars sold on Friday = $(3200 - 1000) = 2200$

The number of Ford cars sold on Wednesday = $(2200 - 1000) = 1200$

The total number of cars sold on Wednesday = $(1200 + 720) = 1920$

Hence, the correct answer is option A

2. Questions

Answer: A

The total number of cars sold on Tuesday = $1950 * 100/65 = 3000$

The number of Ford cars sold on Tuesday = $3000 * 35/100 = 1050$

Hence, the correct answer is option A

3. Questions

Answer: D

The total number of cars sold on Monday = $(3200 + 800) = 4000$

The number of Ford cars sold on Monday = $4000 * 45/100 = 1800$

Hence, the correct answer is option D

4. Questions

Answer: B

The total number of cars sold on Wednesday = $720 * 100/80 = 900$

Hence, the correct answer is option B

5. Questions

Answer: A

The number of Alto cars sold on Wednesday = 720

The number of Alto cars sold on Thursday = $(2400 - 1400) = 1000$

The number of Alto cars sold on Friday = $(3820 - 1000 - 720) = 2100$

The number of Ford cars sold on Friday = $3200 - 2100 = 1100$

Hence, the correct answer is option A

6. Questions

@RankZen Banker

The percentage of the number of staff working in office B = $100\% - 24\% - 16\% - 10\% - 24\% = 26\%$

The total number of staff working in all offices together = $624 * 100/26 = 2400$

The total number of staff working in office A = $2400 * 24/100 = 576$

The total number of staff working in office B = $2400 * 26/100 = 624$

The total number of staff working in office C = $2400 * 16/100 = 384$

The total number of staff working in office D = $2400 * 10/100 = 240$

The total number of staff working in office E = $2400 * 24/100 = 576$

Office	The total number of staff working
A	576
B	624
C	384
D	240
E	576

Answer: D

The number of clerks working in office B = $(624 + 24)/2 = 324$

The number of managers working in office B = $(624 - 324) = 300$

The number of clerks working in office C = $(420 - 324) = 96$

The number of managers working in office C = $(384 - 96) = 288$

Required sum = $(300 + 288) = 588$

Hence, the correct answer is option D

7. Questions

The percentage of the number of staff working in office B = $100\% - 24\% - 16\% - 10\% - 24\% = 26\%$

The total number of staff working in all offices together = $624 * 100/26 = 2400$

The total number of staff working in office A = $2400 * 24/100 = 576$

The total number of staff working in office B = $2400 * 26/100 = 624$

The total number of staff working in office C = $2400 * 16/100 = 384$

The total number of staff working in office D = $2400 * 10/100 = 240$

The total number of staff working in office E = $2400 * 24/100 = 576$

Office	The total number of staff working
A	576
B	624
C	384
D	240
E	576

Answer: E

The total number of staff working in office F = $240 \times \frac{130}{100} = 312$

The number of clerks working in office F = $312 \times \frac{5}{8} = 39 \times 5 = 195$

Hence, the correct answer is option E

8. Questions

The percentage of the number of staff working in office B = $100\% - 24\% - 16\% - 10\% - 24\% = 26\%$

The total number of staff working in all offices together = $624 \times \frac{100}{26} = 2400$

The total number of staff working in office A = $2400 \times \frac{24}{100} = 576$

The total number of staff working in office B = $2400 \times \frac{26}{100} = 624$

The total number of staff working in office C = $2400 \times \frac{16}{100} = 384$

The total number of staff working in office D = $2400 \times \frac{10}{100} = 240$

The total number of staff working in office E = $2400 \times \frac{24}{100} = 576$

Office	The total number of staff working
A	576
B	624
C	384
D	240
E	576

@RankZen Banker

Answer: B

The sum of the number of staff working in offices B, C and D together = $(624 + 384 + 240) = 1248$

Hence, the correct answer is option B

9. Questions

The percentage of the number of staff working in office B = $100\% - 24\% - 16\% - 10\% - 24\% = 26\%$

The total number of staff working in all offices together = $624 * 100/26 = 2400$

The total number of staff working in office A = $2400 * 24/100 = 576$

The total number of staff working in office B = $2400 * 26/100 = 624$

The total number of staff working in office C = $2400 * 16/100 = 384$

The total number of staff working in office D = $2400 * 10/100 = 240$

The total number of staff working in office E = $2400 * 24/100 = 576$

Office	The total number of staff working
A	576
B	624
C	384
D	240
E	576

Answer: D

The total number of staff working in office B = 624

The number of managers working in office B = $624 * 5/6 = 520$

The number of female managers working in office B = $520 * 1/4 = 130$

Hence, the correct answer is option D

10. Questions

The percentage of the number of staff working in office B = $100\% - 24\% - 16\% - 10\% - 24\% = 26\%$

The total number of staff working in all offices together = $624 * 100/26 = 2400$

The total number of staff working in office A = $2400 * 24/100 = 576$

The total number of staff working in office B = $2400 * 26/100 = 624$

The total number of staff working in office C = $2400 * 16/100 = 384$

The total number of staff working in office D = $2400 * 10/100 = 240$

The total number of staff working in office E = $2400 * 24/100 = 576$

Office	The total number of staff working
A	576
B	624
C	384
D	240
E	576

Answer: D

The total number of staff working in office D = 240

The number of females working in office D = $240 \times \frac{60}{100} = 144$

Hence, the correct answer is option D

11. Questions

Answer: D

The volume of the cylinder = $\pi r^2 h = \frac{22}{7} \times 14 \times 14 \times 5 = 3080 \text{ m}^3$

The volume of the cuboid = $3080 \times \frac{125}{100} = 3850 \text{ m}^3$.

Let the length of the cuboid be l m.

$l b h = 3850$

$3850 = 14 \times 10 \times l$

$l = 27.5$

The length of the cuboid = 27.5 m

Hence, the correct answer is option D

12. Questions

Answer: C

Let, the speed of the stream = y km/hr

The speed of the boat in still water = $6 \times y = 6y \text{ km/hr}$.

The downstream speed of the boat = $(6y + y) = 7y \text{ km/hr}$

The upstream speed of the boat = $(6y - y) = 5y \text{ km/hr}$

$\frac{2x + 50}{7y} = \frac{125}{100} \times \frac{(2x - 100)}{5y}$

$\frac{(2x + 50)}{7} = \frac{5}{4} \times \frac{(2x - 100)}{5}$

@RankZen Banker

$$8x + 200 = 14x - 700$$

$$6x = 900$$

$$x = 150$$

Hence, the correct answer is option C

13. Questions

Answer: C

Let the total number of students in class B initially = $4x$

And the total number of students in class A initially = $4x * 125/100 = 5x$

The total number of students in classes A and B together initially = $5x + 4x = 9x$

$$(5x + 24)/(4x + 24) = 7/6$$

$$30x + 144 = 28x + 168$$

$$2x = 24$$

$$x = 12$$

The total number of students in classes A and B together initially = $9 * 12 = 108$

The total number of students in class C = $(108/2) = 54$

Hence, the correct answer is option C

14. Questions

Answer: A

The ratio of the profit share of A to B = $[350 * 2 + (350 + 100) * 10] : [2x * 2 + (2x * 225/100) * 6]$

$$= (700 + 4500) : (4x + 27x)$$

$$= 5200 : 31x$$

$$5200/31x = 52/31$$

$$x = 100$$

Hence, the correct answer is option A

15. Questions

Answer: D

The sum of the present age of A, B, C and D = $31.5 * 4 = 126$ years

The ratio of the present age of B to C = $100 : 60 = 5 : 3$

The present age of B = $5x$

The present age of C = $3x$

$$(5x + 5) = (3x + 17)$$

@RankZen Banker

$$2x = 12$$

$$x = 6$$

The present age of B = $5 * 6 = 30$ years

The present age of C = $3 * 6 = 18$ years

The present age of D = $18 * 2 = 36$ years

The present age of A = $126 - 30 - 18 - 36 = 42$ years

Hence, the correct answer is option D

16. Questions

Answer: B

The cost price of the article = Rs. 2400

The marked price of the article = $2400 * 145/100 = \text{Rs. } 3480$

$$SP = 3480 * 80/100 - 184$$

$$SP = 2784 - 184$$

$$SP = 2600$$

The selling price of the article = Rs. 2600

Hence, the correct answer is option B

17. Questions

Answer: D

According to the question,

Let the amount invested in SI be Rs. p.

$$\text{The compound interest obtained} = 15000 * (120/100)^2 - 15000$$

$$= 15000 * 1.2 * 1.2 - 15000$$

$$= 21600 - 15000$$

$$= \text{Rs. } 6600$$

$$\text{The simple interest obtained} = 6600 * 125/100 = \text{Rs. } 8250$$

$$p * 5 * 10/100 = 8250$$

$$p = 8250 * 100/50$$

$$p = 16500$$

Hence, the correct answer is option D

18. Questions

Answer: B

@RankZen Banker

Let, the two numbers be $11x$ and $5x$ respectively.

$$11x - (5x + 20) = 100$$

$$6x = 120$$

$$x = 20$$

$$\text{The smaller number} = 20 * 5 = 100$$

$$\text{Required resultant} = 100 + 25 = 125$$

Hence, the correct answer is option B

19. Questions

Answer: C

The speed of the train = x m/sec

The length of the train = d m

The time taken by the train to cross a pole = (d/x) seconds

$$d/(x - 2) = 110/100 * (d/x)$$

$$10x = 11 * (x - 2)$$

$$10x = 11x - 22$$

$$x = 22 \text{ m/sec}$$

$$\text{The length of the train} = 22 * 20 - 140 = 440 - 140 = 300 \text{ m}$$

Hence, the correct answer is option C

20. Questions

Answer: B

The ratio of the time taken by pipe X to pipe Y to fill the tank =

$$(1/100) : (1/125) = 5:4$$

$$\text{The time taken by pipe Y to fill the tank} = 20 * 4/5 = 16 \text{ hours}$$

$$\text{Total capacity of water tank (LCM of 20, 16 and 12)} = 240 \text{ units}$$

$$\text{The efficiency of pipe X} = 240/20 = 12 \text{ units/hour}$$

$$\text{The efficiency of pipe Y} = 240/16 = 15 \text{ units/hour}$$

$$\text{The efficiency of pipe Z} = 240/12 = 20 \text{ units/hour}$$

$$\text{Net Efficiency when three pipes are opened} = 12 + 15 - 20 = 7 \text{ units/hour}$$

$$\text{Required time taken} = (240/7) \text{ hours}$$

Hence, the correct answer is option B

21. Questions

@RankZen Banker

Answer: A

$$30\% \text{ of } (144 + 6) + 17 * 20 = 5 * ? - 20 * 3$$

$$30/100 * (150) + 340 = 5 * ? - 60$$

$$45 + 340 = 5 * ? - 60$$

$$385 + 60 = 5 * ?$$

$$? = 445/5$$

$$? = 89$$

Hence, the correct answer is option A

22. Questions

Answer: B

$$32^{(6/10)} * 9 + (32 + 48) * 4 = ?^2 * 2$$

$$(2^5)^{(3/5)} * 9 + (80) * 4 = ?^2 * 2$$

$$8 * 9 + 320 = ?^2 * 2$$

$$392 = ?^2 * 2$$

$$?^2 = 196 = 14^2$$

$$? = 14$$

Hence, the correct answer is option B

23. Questions

Answer: E

$$(21 * 6 * 12 / 8) + 40 = ? * 4 - (1331)^{1/3}$$

$$(21 * 9) + 40 = ? * 4 - 11$$

$$189 + 40 + 11 = ? * 4$$

$$? = 240/4$$

$$? = 60$$

Hence, the correct answer is option E

24. Questions

Answer: B

$$20\% \text{ of } 1250 + 81 + (2744)^{1/3} = ? * (25)^{1/2}$$

$$(20/100) * 1250 + 81 + 14 = ? * 5$$

@RankZen Banker

$$? = (250 + 95)/5$$

$$? = 345/5$$

$$? = 69$$

Hence, the correct answer is option B

25. Questions

Answer: D

$$32\% \text{ of } 600 + 20\% \text{ of } 420 = 3 * ? - (144)^{1/2}$$

$$(32/100) * 600 + (20/100) * 420 = 3 * ? - 12$$

$$192 + 84 = 3 * ? - 12$$

$$276 = 3 * ? - 12$$

$$? = 288/3$$

$$? = 96$$

Hence, the correct answer is option D

26. Questions

Answer: B

$$(29.9 * 7 + 179.98) / \sqrt{169} = ? * 40.12 / 760$$

$$(30 * 7 + 180) / \sqrt{169} = ? * 40 / 760$$

$$(210 + 180) / 13 = ? * 1 / 19$$

$$? = 390 / 13 * 19$$

$$? = 30 * 19$$

$$? = 570$$

Hence, the correct answer is option B

27. Questions

Answer: E

$$((13/3) + (37/7)) * 126.12 / 101.01 = ? - \sqrt{121} * 1.98^3$$

$$((13/3) + (37/7)) * 126 / 101 = ? - \sqrt{121} * 2^3$$

$$? - 11 * 8 = ((13/3) + (37/7)) * 126 / 101$$

$$? - 88 = (91 + 111) / 21 * 126 / 101$$

$$? - 88 = 202 / 21 * 126 / 101$$

$$? = 2 * 6 + 88$$

@RankZen Banker

$$? = 100$$

Hence, the correct answer is option E

28. Questions

Answer: A

$$(344.12 - 40.92 * 4) = ? * 114.98 / 23.10$$

$$(344 - 41 * 4) = ? * 115 / 23$$

$$(344 - 164) = ? * 115 / 23$$

$$180 = ? * 5$$

$$? = 180 / 5$$

$$? = 36$$

Hence, the correct answer is option A

29. Questions

Answer: C

$$25.12\% \text{ of } 799.98 - \sqrt{225} * 7.98 = ? - 21.85 * 4$$

$$25\% \text{ of } 800 - \sqrt{225} * 8 = ? - 22 * 4$$

$$(25/100) * 800 - 15 * 8 = ? - 88$$

$$200 - 120 + 88 = ?$$

$$? = 168$$

Hence, the correct answer is option C

30. Questions

Answer: D

$$12.01 * 28\% \text{ of } (971.12 + 529.01) - 40 = ? * 5^2$$

$$12 * (28/100) * (971 + 529) - 40 = ? * 5^2$$

$$12 * (28/100) * 1500 - 40 = ? * 25$$

$$5040 - 40 = ? * 25$$

$$? = 200$$

Hence, the correct answer is option D

31. Questions

Answer: A

$$20 * 2.5 + 2 = 52$$

$$52 * 2.5 + 2 = 132$$

@RankZen Banker

$$132 * 2.5 + 2 = 332$$

$$332 * 2.5 + 2 = \mathbf{832}$$

$$832 * 2.5 + 2 = 2082$$

Hence, the correct answer is option A

32. Questions

Answer: A

$$19 + 11 = 30$$

$$30 + 13 = 43$$

$$43 + 17 = 60$$

$$60 + 19 = 79$$

$$79 + 23 = 102$$

Hence, the correct answer is option A

33. Questions

Answer: C

$$89 + 11^2 = 210$$

$$210 + 7^2 = 259$$

$$259 + 5^2 = 284$$

$$284 + 3^2 = 293$$

$$293 + 2^2 = 297$$

Hence, the correct answer is option C

34. Questions

Answer: A

$$26 + 61 = 87$$

$$87 - 71 = 16$$

$$16 + 81 = 97$$

$$97 - 91 = \mathbf{6}$$

Hence, the correct answer is option A

35. Questions

Answer: E

$$2 * 5 = \mathbf{10}$$

@RankZen Banker

$$10 * 7 = 70$$

$$70 * 9 = 630$$

$$630 * 11 = 6930$$

Hence, the correct answer is option E

36. Questions

Answer: D

$$10 \quad 23 \quad 40 \quad 59 \quad 82 \quad 111$$

$$13 \quad 17 \quad 19 \quad 23 \quad 29$$

Hence, the correct answer is option D

37. Questions

Answer: C

$$6 + 2^1 = 8$$

$$8 + 2^2 = 12$$

$$12 + 2^3 = 20$$

$$20 + 2^4 = 36$$

$$36 + 2^5 = 68$$

Hence, the correct answer is option C

38. Questions

Answer: E

$$480/5 = 96$$

$$96/4 = 24$$

$$24/3 = 8$$

$$8/2 = 4$$

$$4/1 = 4$$

Hence, the correct answer is option E

39. Questions

Answer: A

$$10 * 3 = 30$$

$$30 * 5 = 150$$

$$150 * 7 = 1050$$

@RankZen Banker

$$1050 \times 9 = \mathbf{9450}$$

Hence, the correct answer is option A

40. Questions

Answer: B

$$1250 - 19 = 1231$$

$$1231 - 23 = 1208$$

$$1208 - 29 = 1179$$

$$1179 - 31 = \mathbf{1148}$$

$$1148 - 37 = 1111$$

Hence, the correct answer is option B

41. Questions

Answer: A

i). $x^2 - 27x + 182 = 0$

$$x^2 - 13x - 14x + 182 = 0$$

$$x(x - 13) - 14(x - 13) = 0$$

$$(x - 14)(x - 13) = 0$$

$$x = 14, 13$$

ii). $y^2 - 18y + 80 = 0$

$$y^2 - 10y - 8y + 80 = 0$$

$$y(y - 10) - 8(y - 10) = 0$$

$$(y - 10)(y - 8) = 0$$

$$y = 10, 8$$

Thus, $x > y$

Hence, the correct answer is option A

42. Questions

Answer: D

i). $2x^2 - 7x + 6 = 0$

$$2x^2 - 4x - 3x + 6 = 0$$

$$2x(x - 2) - 3(x - 2) = 0$$

$$(x - 2)(2x - 3) = 0$$

@RankZen Banker

$$x = 2, 3/2$$

$$\text{ii). } y^2 - 23y + 132 = 0$$

$$y^2 - 12y - 11y + 132 = 0$$

$$y(y - 12) - 11(y - 12) = 0$$

$$(y - 11)(y - 12) = 0$$

$$y = 11, 12$$

Thus, $x < y$

Hence, the correct answer is option D

43. Questions

Answer: A

$$\text{i). } x^2 - 43x + 442 = 0$$

$$x^2 - 26x - 17x + 442 = 0$$

$$x(x - 26) - 17(x - 26) = 0$$

$$(x - 26)(x - 17) = 0$$

$$x = +26, +17$$

$$\text{ii). } y^2 + 26y + 169 = 0$$

$$y^2 + 13y + 13y + 169 = 0$$

$$y(y + 13) + 13(y + 13) = 0$$

$$(y + 13)(y + 13) = 0$$

$$y = -13, -13$$

Thus, $x > y$

Hence, the correct answer is option A

44. Questions

Answer: D

$$\text{i). } x^2 - 3x - 40 = 0$$

$$x^2 - 8x + 5x - 40 = 0$$

$$x(x - 8) + 5(x - 8) = 0$$

$$(x - 8)(x + 5) = 0$$

$$x = +8, -5$$

@RankZen Banker

ii). $y^2 - 34y + 285 = 0$

$$y^2 - 15y - 19y + 285 = 0$$

$$y(y - 15) - 19(y - 15) = 0$$

$$(y - 15)(y - 19) = 0$$

$$y = +15, +19$$

Thus, $x < y$

Hence, the correct answer is option D

45. Questions

Answer: C

i). $x^2 - 14x + 48 = 0$

$$x^2 - 6x - 8x + 48 = 0$$

$$x(x - 6) - 8(x - 6) = 0$$

$$(x - 6)(x - 8) = 0$$

$$x = +6, +8$$

ii). $y^2 - 10y + 21 = 0$

$$y^2 - 7y - 3y + 21 = 0$$

$$y(y - 7) - 3(y - 7) = 0$$

$$(y - 7)(y - 3) = 0$$

$$y = +7, +3$$

Thus, the relationship cannot be established.

Hence, the correct answer is option C

@RankZen Banker
