

1. Questions

Study the following information carefully and answer the following questions.

The given table chart shows the total population in five different cities namely P, Q, R, S and T respectively in the year 2020, and the ratio of the male to female population in five different cities.

City	The total population	The ratio of the male to female population
P	8000	3:2
Q	4000	1:3
R	12000	3:5
S	10000	11:9
T	6000	2:1

If the male population in city Q in 2021 decreased by 40% compared to the previous year, then find the total male population in city Q in 2021.

- a. 600
- b. 540
- c. 480
- d. 420
- e. 300

2. Questions

Find the difference between the female population in cities R and S together and the male population in city Q.

- a. 8000
- b. 9200
- c. 7500
- d. 10000
- e. 11000

@RankZen Banker

3. Questions

If the total population in city U is 20% less than the male population in city P, then find the ratio of the total population in city U to the female population in city Q.

- a. 37: 19
- b. 32: 21

- c. 32: 25
- d. 28: 19
- e. 31: 29

4. Questions

In city S, the male illiterate population is 20% more than the male literate population, find the male literate population in city S.

- a. 2000
- b. 5000
- c. 4800
- d. 3000
- e. 2500

5. Questions

Find the sum of the female population in cities P, R and S together.

- a. 8800
- b. 15200
- c. 11400
- d. 9800
- e. 21400

6. Questions

Study the following information carefully and answer the following questions.

The given line graph shows the number of guavas exported on four different days, namely Monday, Tuesday, Wednesday and Thursday, respectively, and also the number of oranges exported on these four days.

Note: The total number of fruits exported = The number of guavas exported + The number of oranges exported.

The number of oranges exported on Monday is what percentage of the total number of fruits exported on Thursday?

- a. 40%
- b. 32%
- c. 28%
- d. 50%
- e. 45%

7. Questions

On Tuesday, the fruits were exported to two countries: the USA and the UK. The ratio of the number of oranges exported to the USA to the UK is 4:7. Find the number of oranges exported to the UK.

- a. 4200
- b. 2100
- c. 3500
- d. 4900
- e. 2800

8. Questions

If the average number of oranges exported on Thursday and Friday is equal to the total number of fruits exported on Monday, then find the number of oranges exported on Friday.

- a. 5000
- b. 5200
- c. 3200
- d. 6200
- e. 4800

9. Questions

Find the sum of $\frac{1}{4}$ of the number of oranges exported on Wednesday and $\frac{1}{5}$ of the number of guavas exported on Wednesday.

- a. 780
- b. 900
- c. 800
- d. 820
- e. 750

10. Questions

Find the ratio of the total number of fruits exported on Wednesday to the number of oranges exported on Monday.

- a. 19: 8
- b. 88: 71
- c. 30: 41
- d. 29: 28
- e. 45: 49

11. Questions

@RankZen Banker

The quantity of milk is 80% of the total quantity of mixture, and the quantity of water in the mixture is 6 liters. If 15 liters of the mixture is taken out and x liters of water and $(x - 3)$ liters of milk are added to the mixture, then the ratio of milk to water becomes 9:7. Find the value of x .

- a. 19
- b. 18
- c. 20
- d. 16

e. 15

12. Questions

Two years hence, the ratio of the age of A to B is 3:4. Two years ago, the ratio of their ages was 2:3. Find the present age of A.

- a. 12 years
- b. 8 years
- c. 20 years
- d. 10 years
- e. 15 years

13. Questions

Pipes A and B alone can fill the tank in 24 hours and 60 hours, respectively. The efficiency of pipe C is twice that of pipe B. Find the time taken by pipes A and C together to fill the tank.

- a. $41/9$ hours
- b. $38/3$ hours
- c. $40/3$ hours
- d. $80/9$ hours
- e. 10 hours

14. Questions

The area of the rectangle is 135 cm^2 and the breadth of the rectangle is 60% of the length of the rectangle, then find the perimeter of the rectangle. (Positive integers only)

- a. 48 cm
- b. 32 cm
- c. 56 cm
- d. 72 cm
- e. 40 cm

@RankZen Banker

15. Questions

The ratio of time taken by the boat to cover a certain distance (in meters) upstream to the time taken to cover the same distance downstream is 5:4. If the downstream speed and the upstream speed of the boat are $(2x - 1) \text{ m/sec}$ and $(x + 4) \text{ m/sec}$ respectively, then find the upstream speed of the boat.

- a. 18 m/sec

- b. 12 m/sec
- c. 28 m/sec
- d. 27 m/sec
- e. 10 m/sec

16. Questions

A and B started a business in which B invested Rs. 100 less than A. 5 months later, A withdrew 50% of his investment. At the end of the year, the ratio of the profit share of A to B is 85:96. Find the initial investment of A.

- a. Rs.500
- b. Rs.600
- c. Rs.700
- d. Rs.400
- e. Rs.450

17. Questions

The ratio of the two numbers is 12:5 and their difference is 63. If the larger number is multiplied by 20 and then divided by 10, then find the resultant value.

- a. 216
- b. 200
- c. 324
- d. 188
- e. 156

18. Questions

A storekeeper paid a particular sum for two bags. He made a profit of 25% on the first bag and a loss of 20% on the second bag. If the selling price of each bag is Rs. 6000, find the total loss obtained by the storekeeper.

- a. Rs. 800
- b. Rs. 520
- c. Rs. 450
- d. Rs. 280
- e. Rs. 300

19. Questions

A bag contains x red, 4 blue, and 4 white balls. The probability of selecting a red ball in the bag is $\frac{1}{2}$. Find the probability of selecting two blue balls from the bag.

- a. $\frac{1}{20}$
- b. $\frac{2}{27}$
- c. $\frac{1}{19}$
- d. $\frac{3}{19}$
- e. $\frac{7}{13}$

20. Questions

A farmer invested Rs. $4P$ at 20% compounded annually and also invested Rs. P at 30% per annum as simple interest. If the total interest received by the farmer after 2 years is Rs. 11,800, find the value of P .

- a. Rs. 5000
- b. Rs. 5500
- c. Rs. 2500
- d. Rs. 3000
- e. Rs. 6000

21. Questions

What value should come in the place of (?) in the following questions.

$$?^2 - 49 = 67 - 38 * 5 + 270$$

- a. 12
- b. 8
- c. 10
- d. 14
- e. 21

@RankZen Banker

22. Questions

$$5 * ? - 35/7 = [1575 + (50/2)]/4$$

- a. 72
- b. 65
- c. 80
- d. 56

e. 81

23. Questions

$$200\% \text{ of } 30 - 227 = 20\% \text{ of } 500 - ?$$

- a. 267
- b. 252
- c. 190
- d. 157
- e. 288

24. Questions

$$(1089 * 3) / (33 * 9) = ? + (729)^{1/3}$$

- a. 4
- b. 2
- c. 8
- d. 7
- e. 5

25. Questions

$$[4 (2/5) + 2 (3/5)] * 250 = ? + 30$$

- a. 2115
- b. 1720
- c. 1080
- d. 1920
- e. 980

26. Questions

What approximate value should come in the place of (?) in the following questions?

$$1.98^2 * 3.9 + 189.98 = ? + 209.12$$

- a. -26
- b. -8
- c. -13
- d. -3

@RankZen Banker

e. -33

27. Questions

$$55.98 * 5.98 + 103.98/13 = ?/9.01$$

- a. 2880
- b. 3096
- c. 2180
- d. 2000
- e. 3425

28. Questions

$$350\% \text{ of } 70.12 + 21.22 * 4.98 = ? - 14.12 * 4.98$$

- a. 380
- b. 400
- c. 360
- d. 420
- e. 500

29. Questions

$$47.01 * (576)^{1/2} - 109.98 * 8.98 = ? * 3/5$$

- a. 198
- b. 210
- c. 176
- d. 240
- e. 230

30. Questions

$$(39.98 * 5.12) + (12.12 * 2.98) = ?^3 + 19.89$$

- a. 5
- b. 3
- c. 7
- d. 6
- e. 2

@RankZen Banker

31. Questions

What value should come in the place of (?) in the following number series?

18, ?, 167, 504, 1516, 4553

- a. 45
- b. 42
- c. 36
- d. 55
- e. 63

32. Questions

?, 80, 110, 160, 230

- a. 60
- b. 65
- c. 50
- d. 75
- e. 70

33. Questions

6.5, 8, 11, 15.5, 21.5, ?

- a. 29
- b. 32
- c. 42
- d. 33
- e. 30

34. Questions

162, ? 243, 486, 1215, 3645

- a. 175
- b. 156
- c. 162
- d. 204
- e. 207

@RankZen Banker

35. Questions**167, 171, ?, 187, 203, 227**

- a. 177
- b. 205
- c. 172
- d. 181
- e. 180

36. Questions**Find out the wrong number in the following number series.****455, 474, 516, 569, 645, 740**

- a. 645
- b. 740
- c. 474
- d. 455
- e. 516

37. Questions**17, 38, 102, 408, 2040, 12240**

- a. 102
- b. 408
- c. 2040
- d. 17
- e. 38

38. Questions**45, 62, 79, 102, 125, 150**

- a. 45
- b. 79
- c. 102
- d. 125
- e. 150

@RankZen Banker

39. Questions**600, 310, 900, 225, 1125, 187.5**

- a. 225
- b. 1125
- c. 600
- d. 310
- e. 187.5

40. Questions**235, 250, 290, 340, 460, 700**

- a. 290
- b. 235
- c. 460
- d. 700
- e. 340

41. Questions

The following question contains two equations as I and II. You have to solve both equations and determine the relationship between them and give an answer.

i). $x^2 - 29x + 78 = 0$

ii). $y^2 - 30y + 56 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or the relationship cannot be determined.
- d. $x < y$
- e. $x \leq y$

@RankZen Banker

42. Questions

i). $x^2 - 18x + 81 = 0$

ii). $y^2 - 8y + 16 = 0$

- a. $x > y$
- b. $x \geq y$

- c. $x = y$ or the relationship cannot be determined.
- d. $x < y$
- e. $x \leq y$

43. Questions

i). $x^2 - 33x + 216 = 0$

ii). $2y^2 + 31y - 51 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or the relationship cannot be determined.
- d. $x < y$
- e. $x \leq y$

44. Questions

i). $x^2 - 25x + 126 = 0$

ii). $y^2 + 3y - 108 = 0$

- a. $x > y$
- b. $x \geq y$
- c. $x = y$ or the relationship cannot be determined.
- d. $x < y$
- e. $x \leq y$

45. Questions

i). $x^2 + 16x + 48 = 0$

ii). $y^2 + 3y + 2 = 0$

- a. $y > x$
- b. $y \geq x$
- c. $y = x$ or the relationship cannot be determined.
- d. $y < x$
- e. $y \leq x$

@RankZen Banker

Explanations:

1. Questions

In city P:

The total population = 8000

The male population = $8000 * (3/5) = 4800$

The female population = $8000 * (2/5) = 3200$

In city Q:

The total population = 4000

The male population = $4000 * (1/4) = 1000$

The female population = $4000 * (3/4) = 3000$

In city R:

The total population = 12000

The male population = $12000 * (3/8) = 4500$

The female population = $12000 * (5/8) = 7500$

In city S:

The total population = 10000

The male population = $10000 * (11/20) = 5500$

The female population = $10000 * (9/20) = 4500$

In city T:

The total population = 6000

The male population = $6000 * 2/3 = 4000$

The female population = $6000 - 4000 = 2000$

City	The total population	The male population	The female population
P	8000	4800	3200
Q	4000	1000	3000
R	12000	4500	7500
S	10000	5500	4500
T	6000	4000	2000

@RankZen Banker

Answer: A

The male population in city Q in 2021 = $[1000 * 60/100] = 600$

Hence, the correct answer is option A

2. Questions

In city P:

The total population = 8000

The male population = $8000 * (3/5) = 4800$

The female population = $8000 * (2/5) = 3200$

In city Q:

The total population = 4000

The male population = $4000 * (1/4) = 1000$

The female population = $4000 * (3/4) = 3000$

In city R:

The total population = 12000

The male population = $12000 * (3/8) = 4500$

The female population = $12000 * (5/8) = 7500$

In city S:

The total population = 10000

The male population = $10000 * (11/20) = 5500$

The female population = $10000 * (9/20) = 4500$

In city T:

The total population = 6000

The male population = $6000 * 2/3 = 4000$

The female population = $6000 - 4000 = 2000$

City	The total population	The male population	The female population
P	8000	4800	3200
Q	4000	1000	3000
R	12000	4500	7500
S	10000	5500	4500
T	6000	4000	2000

@RankZen Banker

Answer: E

The female population in cities R and S together = $7500 + 4500 = 12000$

The male population in city Q = 1000

Required difference = $12000 - 1000 = 11000$

Hence, the correct answer is option E

3. Questions

In city P:

The total population = 8000

The male population = $8000 * (3/5) = 4800$

The female population = $8000 * (2/5) = 3200$

In city Q:

The total population = 4000

The male population = $4000 * (1/4) = 1000$

The female population = $4000 * (3/4) = 3000$

In city R:

The total population = 12000

The male population = $12000 * (3/8) = 4500$

The female population = $12000 * (5/8) = 7500$

In city S:

The total population = 10000

The male population = $10000 * (11/20) = 5500$

The female population = $10000 * (9/20) = 4500$

In city T:

The total population = 6000

The male population = $6000 * 2/3 = 4000$

The female population = $6000 - 4000 = 2000$

City	The total population	The male population	The female population
P	8000	4800	3200
Q	4000	1000	3000
R	12000	4500	7500
S	10000	5500	4500
T	6000	4000	2000

@RankZen Banker

Answer: C

The total population in city U = $(80/100) * 4800 = 3840$

Required ratio = $3840: 3000 = 32: 25$

Hence, the correct answer is option C

4. Questions

In city P:

The total population = 8000

The male population = $8000 * (3/5) = 4800$

The female population = $8000 * (2/5) = 3200$

In city Q:

The total population = 4000

The male population = $4000 * (1/4) = 1000$

The female population = $4000 * (3/4) = 3000$

In city R:

The total population = 12000

The male population = $12000 * (3/8) = 4500$

The female population = $12000 * (5/8) = 7500$

In city S:

The total population = 10000

The male population = $10000 * (11/20) = 5500$

The female population = $10000 * (9/20) = 4500$

In city T:

The total population = 6000

The male population = $6000 * 2/3 = 4000$

The female population = $6000 - 4000 = 2000$

@RankZen Banker

City	The total population	The male population	The female population
P	8000	4800	3200
Q	4000	1000	3000
R	12000	4500	7500
S	10000	5500	4500
T	6000	4000	2000

Answer: E

In city S

The male illiterate population = 120% of the male literate population

The male illiterate population/the male literate population = $120/100 = 6/5$

The male literate population = $5500/11 * 5 = 2500$

Hence, the correct answer is option E

5. Questions

In city P:

The total population = 8000

The male population = $8000 * (3/5) = 4800$

The female population = $8000 * (2/5) = 3200$

In city Q:

The total population = 4000

The male population = $4000 * (1/4) = 1000$

The female population = $4000 * (3/4) = 3000$

In city R:

The total population = 12000

The male population = $12000 * (3/8) = 4500$

The female population = $12000 * (5/8) = 7500$

In city S:

The total population = 10000

The male population = $10000 * (11/20) = 5500$

The female population = $10000 * (9/20) = 4500$

In city T:

@RankZen Banker

The total population = 6000

The male population = $6000 \times \frac{2}{3} = 4000$

The female population = $6000 - 4000 = 2000$

City	The total population	The male population	The female population
P	8000	4800	3200
Q	4000	1000	3000
R	12000	4500	7500
S	10000	5500	4500
T	6000	4000	2000

Answer: B

The sum of the female population in cities P, R and S together = $(3200 + 7500 + 4500) = 15200$

Hence, the correct answer is option B

6. Questions

On Monday:

The number of guavas exported = 2400

The number of oranges exported = 1600

The total number of fruits exported = $1600 + 2400 = 4000$

On Tuesday:

The number of guavas exported = 1800

The number of oranges exported = 4400

The total number of fruits exported = $4400 + 1800 = 6200$

On Wednesday:

The number of guavas exported = 2600

The number of oranges exported = 1200

The total number of fruits exported = $1200 + 2600 = 3800$

On Thursday:

The number of guavas exported = 1200

The number of oranges exported = 2800

The total number of fruits exported = $2800 + 1200 = 4000$

@RankZen Banker

Days	The total number of fruits exported	The number of oranges exported	The number of guavas exported
Monday	4000	1600	2400
Tuesday	6200	4400	1800
Wednesday	3800	1200	2600
Thursday	4000	2800	1200

Answer: A

The number of oranges exported on Monday = 1600

The total number of fruits exported on Thursday = 4000

Required percentage = $[1600/4000 * 100] = 40\%$

Hence, the correct answer is option A

7. Questions

On Monday:

The number of guavas exported = 2400

The number of oranges exported = 1600

The total number of fruits exported = $1600 + 2400 = 4000$

On Tuesday:

The number of guavas exported = 1800

The number of oranges exported = 4400

The total number of fruits exported = $4400 + 1800 = 6200$

On Wednesday:

The number of guavas exported = 2600

The number of oranges exported = 1200

The total number of fruits exported = $1200 + 2600 = 3800$

On Thursday:

The number of guavas exported = 1200

The number of oranges exported = 2800

The total number of fruits exported = $2800 + 1200 = 4000$

@RankZen Banker

Days	The total number of fruits exported	The number of oranges exported	The number of guavas exported
Monday	4000	1600	2400
Tuesday	6200	4400	1800
Wednesday	3800	1200	2600
Thursday	4000	2800	1200

Answer: E

The number of oranges exported to UK on Tuesday = $4400 \times \frac{7}{11} = 2800$

Hence, the correct answer is option E

8. Questions

On Monday:

The number of guavas exported = 2400

The number of oranges exported = 1600

The total number of fruits exported = $1600 + 2400 = 4000$

On Tuesday:

The number of guavas exported = 1800

The number of oranges exported = 4400

The total number of fruits exported = $4400 + 1800 = 6200$

On Wednesday:

The number of guavas exported = 2600

The number of oranges exported = 1200

The total number of fruits exported = $1200 + 2600 = 3800$

On Thursday:

The number of guavas exported = 1200

The number of oranges exported = 2800

The total number of fruits exported = $2800 + 1200 = 4000$

@RankZen Banker

Days	The total number of fruits exported	The number of oranges exported	The number of guavas exported
Monday	4000	1600	2400
Tuesday	6200	4400	1800
Wednesday	3800	1200	2600
Thursday	4000	2800	1200

Answer: B

The total number of fruits exported on Monday = 4000

The total number of oranges exported on Thursday and Friday together = $(4000 * 2) = 8000$

The number of oranges exported on Friday = $8000 - 2800 = 5200$

Hence, the correct answer is option B

9. Questions

On Monday:

The number of guavas exported = 2400

The number of oranges exported = 1600

The total number of fruits exported = $1600 + 2400 = 4000$

On Tuesday:

The number of guavas exported = 1800

The number of oranges exported = 4400

The total number of fruits exported = $4400 + 1800 = 6200$

On Wednesday:

The number of guavas exported = 2600

The number of oranges exported = 1200

The total number of fruits exported = $1200 + 2600 = 3800$

On Thursday:

The number of guavas exported = 1200

The number of oranges exported = 2800

The total number of fruits exported = $2800 + 1200 = 4000$

@RankZen Banker

Days	The total number of fruits exported	The number of oranges exported	The number of guavas exported
Monday	4000	1600	2400
Tuesday	6200	4400	1800
Wednesday	3800	1200	2600
Thursday	4000	2800	1200

Answer: D

$1/4$ of the number of oranges exported on Wednesday = $1/4 * 1200 = 300$

$1/5$ of the number of guavas exported on Wednesday = $1/5 * 2600 = 520$

Required sum = $300 + 520 = 820$

Hence, the correct answer is option D

10. Questions

On Monday:

The number of guavas exported = 2400

The number of oranges exported = 1600

The total number of fruits exported = $1600 + 2400 = 4000$

On Tuesday:

The number of guavas exported = 1800

The number of oranges exported = 4400

The total number of fruits exported = $4400 + 1800 = 6200$

On Wednesday:

The number of guavas exported = 2600

The number of oranges exported = 1200

The total number of fruits exported = $1200 + 2600 = 3800$

On Thursday:

The number of guavas exported = 1200

The number of oranges exported = 2800

The total number of fruits exported = $2800 + 1200 = 4000$

@RankZen Banker

Days	The total number of fruits exported	The number of oranges exported	The number of guavas exported
Monday	4000	1600	2400
Tuesday	6200	4400	1800
Wednesday	3800	1200	2600
Thursday	4000	2800	1200

Answer: A

The total number of fruits exported on Wednesday = 3800

The number of oranges exported on Monday = 1600

Required ratio = 3800: 1600 = 38: 16 = 19: 8

Hence, the correct answer is option A

11. Questions

Answer: B

The ratio of quantity of milk to water in the mixture = $(100 - 20): 20 = 80: 20 = 4:1$

The quantity of milk in the mixture = $6 * \frac{4}{1} = 24$ liters

$$[24 - (15 * \frac{4}{(4 + 1)}) + (x - 3)] / [6 - (15 * \frac{1}{(4 + 1)}) + x] = 9/7$$

$$[24 - (15 * \frac{4}{5}) + (x - 3)] / [6 - (15 * \frac{1}{5}) + x] = 9/7$$

$$[24 - 12 + x - 3] * 7 = 9 * [6 - 3 + x]$$

$$63 + 7x = 27 + 9x$$

$$x = 36/2$$

$$x = 18$$

Hence, the correct answer is option B

12. Questions

Answer: D

@RankZen Banker

Two years ago, the ages of A and B be $2x$ years and $3x$ years respectively

Present age of A = $(2x + 2)$ years

Present age of B = $(3x + 2)$ years

$$[(2x + 2 + 2)/(3x + 2 + 2)] = 3/4$$

$$[(2x + 4)/(3x + 4)] = 3/4$$

$$8x + 16 = 9x + 12$$

$$x = 4$$

The present age of A = $2x + 2 = 2 * 4 + 2 = 10$ years

Hence, the correct answer is option D

13. Questions

Answer: C

The time taken by A alone to fill the tank = 24 hours

The time taken by B alone to fill the tank = 60 hours

Let, the total work (LCM of 24, 60) = 120 units

The efficiency of pipe A = $120/24 = 5$

The efficiency of pipe B = $120/60 = 2$

The efficiency of pipe C = $2 * 2/1 = 4$

The time taken by pipes A and C together to fill the tank = $120/(5 + 4) = 120/9 = 40/3$ hours

Hence, the correct answer is option C

14. Questions

Answer: A

Let the length and breadth of the rectangle be $5x$ and $3x$ respectively.

The area of the rectangle = $l * b = 135 \text{ cm}^2$

$$5x * 3x = 135$$

$$15x^2 = 135$$

$$x^2 = 9 = 3^2$$

$$x = 3, -3 \text{ [ignore negative value]}$$

The length of the rectangle, $l = 5x = 5 * 3 = 15 \text{ cm}$

The breadth of the rectangle, $b = 3x = 3 * 3 = 9 \text{ cm}$

The perimeter of the rectangle = $[2 * (l + b)] = [2 * (15 + 9)] = 48 \text{ cm}$

Hence, the correct answer is option A

15. Questions

Answer: B

Let the distance covered by the boat downstream and upstream be d meters each.

$$[d/(x + 4)] / [d/(2x - 1)] = 5/4$$

$$[1/(x + 4)] = 5/4 * [1/(2x - 1)]$$

$$8x - 4 = 5x + 20$$

$$3x = 24$$

$$x = 8$$

The upstream speed of the boat = $(x + 4) = 12$ m/sec

Hence, the correct answer is option B

16. Questions

Answer: A

Let the amount invested by A and B be X and $(X - 100)$ respectively.

The investment ratio of A to B = $[(X * 5) + \{[X * (100 - 50)/100] * 7\}]:[(X - 100) * 12]$

$$[(5X + (0.5X * 7))/(12X - 1200)] = 85/96$$

$$(5X + 3.5X) * 96 = 85 * (12X - 1200)$$

$$816X = 1020X - 102000$$

$$204X = 102000$$

$$X = 500$$

Hence, the correct answer is option A

17. Questions

Answer: A

Let, the two numbers be $12x$ and $5x$ respectively.

$$12x - 5x = 63$$

$$7x = 63$$

$$x = 9$$

The larger number = $12 * 9 = 108$

Required value = $[(108 * 20)/10] = 216$

Hence, the correct answer is option A

18. Questions

Answer: E

Let the cost price of the first and second bags be Rs. $100x$ and Rs. $100y$ respectively.

The selling price of each bag is Rs. 6000

So, the selling price of first bag = 6000

$$[100x * (125/100)] = 6000$$

$$x = 6000/125$$

@RankZen Banker

$$x = 48$$

The cost price of the first bag = $100x = 48 * 100 = \text{Rs.}4800$

The selling price of second bag = 6000

$$[100y * (80/100)] = 6000$$

$$y = 6000/80 = 75$$

The cost price of the second bag = $100y = 75 * 100 = \text{Rs.}7500$

The total cost price of two bags = $4800 + 7500 = \text{Rs.}12300$

The total loss obtained by the storekeeper = $12300 - 12000 = \text{Rs.} 300$

Hence, the correct answer is option E

19. Questions

Answer: A

The number of red balls in the bag = x

The number of blue balls in the bag = 4

The number of white balls in the bag = 4

$$[xC_1/(x + 8)C_1] = 1/2$$

$$2x = x + 8$$

$$x = 8$$

The total number of balls in the bag = $(8 + 4 + 4) = 16$

Required probability = $[4C_2/16C_2] = [(4 * 3)/(16 * 15)] = 1/20$

Hence, the correct answer is option A

20. Questions

Answer: A

According to the question,

$$(P * 30 * 2)/100 + \{4P * (1+20/100)^2 - 4P\} = 11800$$

$$(3P/5) + [4P * (36/25 - 1)] = 11800$$

$$[(3P/5) + (44P/25)] = 11800$$

$$59P/25 = 11800$$

$$P = 5000$$

Hence, the correct answer is option A

21. Questions

Answer: D

@RankZen Banker

$$?^2 - 49 = 67 - 38 * 5 + 270$$

$$?^2 - 49 = 67 - 190 + 270$$

$$?^2 - 49 = 147$$

$$?^2 = 196$$

$$? = 14$$

Hence, the correct answer is option D

22. Questions

Answer: E

$$5 * ? - 35/7 = [1575 + (50/2)]/4$$

$$5 * ? - 5 = (1575 + 25)/4$$

$$5 * ? - 5 = 1600/4$$

$$5 * ? - 5 = 400$$

$$5 * ? = 405$$

$$? = 81$$

Hence, the correct answer is option E

23. Questions

Answer: A

$$200\% \text{ of } 30 - 227 = 20\% \text{ of } 500 - ?$$

$$60 - 227 = 100 - ?$$

$$? = 100 + 167$$

$$? = 267$$

Hence, the correct answer is option A

24. Questions

Answer: B

$$[(1089 * 3) / (33 * 9)] = ? + (729)^{1/3}$$

$$(1089/99) = ? + 9$$

$$11 - 9 = ?$$

$$? = 2$$

Hence, the correct answer is option B

25. Questions

@RankZen Banker

Answer: B

$$[4 (2/5) + 2 (3/5)] * 250 = ? + 30$$

$$[22/5 + 13/5] * 250 = ? + 30$$

$$[(35/5) * 250] = ? + 30$$

$$250 * 7 = ? + 30$$

$$1750 - 30 = ?$$

$$? = 1720$$

Hence, the correct answer is option B.

26. Questions

Answer: D

$$1.98^2 * 3.9 + 189.98 = ? + 209.12$$

$$2^2 * 4 + 190 = ? + 209$$

$$16 + 190 = ? + 209$$

$$206 - 209 = ?$$

$$? = -3$$

Hence, the correct answer is option D

27. Questions

Answer: B

$$55.98 * 5.98 + 103.98/13 = ?/9.01$$

$$56 * 6 + 104/13 = ?/9$$

$$336 + 8 = ?/9$$

$$344 * 9 = ?$$

$$? = 3096$$

Hence, the correct answer is option B

28. Questions

Answer: D

$$350\% \text{ of } 70.12 + 21.22 * 4.98 = ? - 14.12 * 4.98$$

$$350\% \text{ of } 70 + 21 * 5 = ? - 14 * 5$$

$$245 + 105 + 70 = ?$$

$$? = 420$$

Hence, the correct answer is option D

@RankZen Banker

29. Questions

Answer: E

$$47.01 * (576)^{1/2} - 109.98 * 8.98 = ? * 3/5$$

$$47 * (576)^{1/2} - (110 * 9) = ? * 3/5$$

$$(47 * 24) - (110 * 9) = ? * 3/5$$

$$1128 - 990 = ? * 3/5$$

$$138 * 5/3 = ?$$

$$? = 230$$

Hence, the correct answer is option E

30. Questions

Answer: D

$$(39.98 * 5.12) + (12.12 * 2.98) = ?^3 + 19.89$$

$$(40 * 5) + (12 * 3) = ?^3 + 20$$

$$200 + 36 - 20 = ?^3$$

$$?^3 = 216$$

$$? = 6$$

Hence, the correct answer is option D

31. Questions

Answer: D

$$[(18 * 3) + 1] = 55$$

$$[(55 * 3) + 2] = 167$$

$$[(167 * 3) + 3] = 504$$

$$[(504 * 3) + 4] = 1516$$

$$[(1516 * 3) + 5] = 4553$$

Hence, the correct answer is option D

32. Questions

Answer: E

$$70 + 10 = 80$$

$$80 + 30 = 110$$

$$110 + 50 = 160$$

@RankZen Banker

$$160 + 70 = 230$$

Hence, the correct answer is option E

33. Questions

Answer: A

$$6.5 + 1.5 = 8$$

$$8 + 3 = 11$$

$$11 + 4.5 = 15.5$$

$$15.5 + 6 = 21.5$$

$$21.5 + 7.5 = \mathbf{29}$$

Hence, the correct answer is option A

34. Questions

Answer: C

$$162 * 1 = \mathbf{162}$$

$$162 * 1.5 = 243$$

$$243 * 2 = 486$$

$$486 * 2.5 = 1215$$

$$1215 * 3 = 3645$$

Hence, the correct answer is option C

35. Questions

Answer: A

167	171	177	187	203	227
4	6	10	16	24	
	2	4	6	8	

Hence, the correct answer is option A

36. Questions

Answer: E

$$455 + 19 = 474$$

$$474 + 38 = \mathbf{512}$$

$$512 + 57 = 569$$

$$569 + 76 = 645$$

$$645 + 95 = 740$$

@RankZen Banker

Hence, the correct answer is option E.

37. Questions

Answer: E

$$17 * 2 = 34$$

$$34 * 3 = 102$$

$$102 * 4 = 408$$

$$408 * 5 = 2040$$

$$2040 * 6 = 12240$$

Hence, the correct answer is option E

38. Questions

Answer: B

$$45 + 17 = 62$$

$$62 + 19 = 81$$

$$81 + 21 = 102$$

$$102 + 23 = 125$$

$$125 + 25 = 150$$

Hence, the correct answer is option B

39. Questions

Answer: D

$$600/2 = 300$$

$$300 * 3 = 900$$

$$900/4 = 225$$

$$225 * 5 = 1125$$

$$1125/6 = 187.5$$

Hence, the correct answer is option D

40. Questions

Answer: A

235	250	280	340	460	700
15	30	60	120	240	
*2	*2	*2	*2		

Hence, the correct answer is option A

@RankZen Banker

41. Questions

Answer: C

i). $x^2 - 29x + 78 = 0$

$$x^2 - 26x - 3x + 78 = 0$$

$$x(x - 26) - 3(x - 26) = 0$$

$$(x - 26)(x - 3) = 0$$

$$x = 26, 3$$

ii). $y^2 - 30y + 56 = 0$

$$y^2 - 28y - 2y + 56 = 0$$

$$y(y - 28) - 2(y - 28) = 0$$

$$(y - 28)(y - 2) = 0$$

$$y = 28, 2$$

Hence, the relationship cannot be determined.

Hence, the correct answer is option C

42. Questions

Answer: A

i). $x^2 - 18x + 81 = 0$

$$x^2 - 9x - 9x + 81 = 0$$

$$x(x - 9) - 9(x - 9) = 0$$

$$(x - 9)(x - 9) = 0$$

$$x = 9, 9$$

ii). $y^2 - 8y + 16 = 0$

$$y^2 - 4y - 4y + 16 = 0$$

$$y(y - 4) - 4(y - 4) = 0$$

$$(y - 4)(y - 4) = 0$$

$$y = 4, 4$$

Hence, $x > y$

Hence, the correct answer is option A

43. Questions

@RankZen Banker

Answer: A

i). $x^2 - 33x + 216 = 0$

$$x^2 - 24x - 9x + 216 = 0$$

$$x(x - 24) - 9(x - 24) = 0$$

$$(x - 24)(x - 9) = 0$$

$$x = 24, 9$$

ii). $2y^2 + 31y - 51 = 0$

$$2y^2 + 34y - 3y - 51 = 0$$

$$2y(y + 17) - 3(y + 17) = 0$$

$$(y + 17)(2y - 3) = 0$$

$$y = 3/2, -17$$

Thus, $x > y$.

Hence, the correct answer is option A

44. Questions

Answer: C

i). $x^2 - 25x + 126 = 0$

$$x^2 - 18x - 7x + 126 = 0$$

$$x(x - 18) - 7(x - 18) = 0$$

$$(x - 18)(x - 7) = 0$$

$$x = 18, 7$$

ii). $y^2 + 3y - 108 = 0$

$$y^2 + 12y - 9y - 108 = 0$$

$$y(y + 12) - 9(y + 12) = 0$$

$$(y + 12)(y - 9) = 0$$

$$y = 9, -12$$

Thus, the relationship cannot be determined.

Hence, the correct answer is option C

45. Questions

Answer: A

@RankZen Banker

i). $x^2 + 16x + 48 = 0$

$$x^2 + 12x + 4x + 48 = 0$$

$$x(x + 12) + 4(x + 12) = 0$$

$$(x + 12)(x + 4) = 0$$

$$x = -12, -4$$

ii). $y^2 + 3y + 2 = 0$

$$y^2 + 2y + y + 2 = 0$$

$$y(y + 2) + 1(y + 2) = 0$$

$$(y + 2)(y + 1) = 0$$

$$y = -2, -1$$

Thus, $y > x$

Hence, the correct answer is option A.

@RankZen Banker
