

1. Questions

Study the following information carefully and answer the given questions.

In a certain code language,

“Tulip stack grape pump” is coded as “#U2 &V7 @V7 %S5”

“Paste green soups tent” is coded as “@F2 &B5 #P1 %S5”

“Tiger pink goals sheets” is coded as “%P1 &J2 @J9 #I1 ”

“Glory poem taste sugar” is coded as “%M7 @B5 &P4 #V9”

Which of the following is the code for the word “Tense” in the given code language?

- a. \$M7
- b. #U9
- c. %V8
- d. @F5
- e. @E5

2. Questions

What may be the code for the phrase “Mark Proof” in the given code language?

- a. \$B2 &S6
- b. %B1 #I1
- c. &J2 &J9
- d. \$B4 #V9
- e. #B9 &P5

3. Questions

Which of the following is the phrase for the code “@S5 &P2” in the given code language?

- a. Tall Pant
- b. Prime Time
- c. True Point
- d. Trash Pork
- e. Giant Shape

@QuizByMickey

4. Questions

What is the code for the phrase “Grape sugar soups” in the given code language?

- a. @J9 %B2 %M7

- b. #U2 &P4 #M9
- c. %P1 #V6 %I6
- d. %M7 @F2 \$V7
- e. #V9 %S5 #P1

5. Questions

Which of the following word represent the code “%S7” in the given code language?

- a. Pink
- b. Grasp
- c. Guide
- d. Tulip
- e. Tiger

6. Questions

Study the following information carefully and answer the given questions.

Fifteen persons from A to O are sitting in three parallel rows in such a way that row 1 is north of Row 2 and Row 2 is north of Row 3. Each row contains five persons. All the persons are facing north.

Note I: The person in row 3 sits exactly behind the person in row 2, and the person in row 2 sits exactly behind the person in row 1. Similarly, all persons are seated in the same manner across all three rows.

Note II: The alphabetically named persons are not sitting adjacent to each other.

N sits third to the left of E but doesn't sit at the extreme ends. One person sits between O and the one who sits immediately in front or behind E. One person sits between N and J. As many persons sit to the right of O as to the left of M. L sits in the same row as M but does not sit opposite to E. The number of persons sitting between L and K is **two more than** the number of persons sitting between G and C. H sits immediate right of D. G sits second to the right of H. F sits one of the positions to the left of B. The one who sits immediately in front of F sits immediately behind the one who sits immediate right of I.

Who among the following person sits exactly in the middle of row 3 as per the final arrangement?

- a. A
- b. The one who sits immediately behind O
- c. The one who sits immediate right of B
- d. The one who sits third to the right of I
- e. K

7. Questions

What is the position of I with respect to J?

- a. Third to the left of the one who sits immediately in front of J
- b. Second to the left
- c. Second to the right
- d. Immediate right
- e. Third to the left

8. Questions

Four of the following are alike in a certain way based on the given arrangement and thus form a group. Which one of the following does not belong to the group?

- a. The one who sits immediate left of H
- b. The one who sits immediate left of N
- c. The one who sits third to the left of K
- d. The one who sits immediate left of G
- e. The one who sits second to the right of A

9. Questions

If we arrange all the persons in each row as per the English alphabetical order from left to right, then how many persons will remain unchanged?

- a. One
- b. Two
- c. Three
- d. More than three
- e. No one

10. Questions

Which of the following statements is/are true as per the final arrangement?

I). B sits immediately behind C.

II). No one sits to the left of A

III). Two persons sit between H and the one who sits immediately behind J.

- a. Only I
- b. Only III
- c. All I, II and III

d. Only I and II

e. Only II

11. Questions

Study the following information carefully and answer the given questions.

Six boxes viz- A, B, C, D, E and F are kept one above another in different shelves of a stack. The position of the bottommost shelf is numbered 1, the position of the shelf immediately above that is numbered 2 and so on till the position of the topmost shelf is numbered as 6. It is assumed that no other boxes are kept in the stack other than the given boxes. Each box contains a different number of balloons and no box contains more than 50 balloons and not less than 10 balloons.

Note: The number of balloons in each box is a multiple of the position of the shelf.

Box A is kept two boxes above the box which contains 36 balloons. As many boxes kept above the box which contains 36 balloons as below C. One box is kept between C and the box which contains 16 balloons, which is not kept on the second shelf. Box F is kept two boxes above box D. Box E contains 40 balloons. Box A contains the highest number of balloons, and the sum of the number of balloons in boxes D and F is equal to the number of balloons with A. The difference between the number of balloons in the box which contains 16 balloons and the box which is kept immediately above it is equal to the number of balloons in box C.

What is the position of box F from the top of the stack?

- a. First
- b. Second
- c. Third
- d. Fourth
- e. Sixth

12. Questions

What is the sum of the number of balloons in box A and the box which is kept immediately below box C?

- a. 88
- b. 54
- c. 72
- d. 76
- e. 84

@QuizByMickey

13. Questions

Which of the following box contains 32 balloons?

- a. A
- b. B
- c. E
- d. D
- e. None

14. Questions

If we arrange all the boxes in ascending order as per the number of balloons in it from top to bottom then, how many boxes will remain unchanged?

- a. One
- b. Two
- c. Three
- d. More than three
- e. None

15. Questions

Which of the following statements are not true as per the final arrangement?

- a. Total number of balloons in 5th and 4th shelves is 56
- b. Box C contains 8 balloons more than box F
- c. Box D contains the second lowest number of balloons
- d. No boxes are kept above the box which contains 24 balloons
- e. Box D contains four balloons less than the box in stack 1

16. Questions

Study the following information carefully and answer the given questions.

A certain number of persons are living in two flats of the certain floors in a building where the lowermost floor is numbered, the one above that is numbered two, and so on.

Note I: Each floor has two flats, viz., Flat 1 and Flat-2, where Flat 1 is to the west of Flat 2.

Note-II: Flat 2 of floor 2 is immediately above Flat 2 of floor 1. Similarly, Flat 1 of floor 3 is immediately above Flat 1 of floor 2 and so on.

Note-III: The Area of each flat on each floor is equal.

Note-IV: Only two persons live on each floor, and only one person lives in each flat.

Only one floor is between V and K's floor, where both of them live on the 5th and 7th in the same type of flat. W lives four floors above V, but not in the same type of flat. J lives immediately above W. Only three

floors are between K and D. As many floors below J as above M, where none of them live on an odd-numbered flat. No one lives below M. D and M live on the same floor. Only two floors are between J and Y, who lives to the northwest of M. The number of floors above W is **one less** than the number of floors below C, where both are living in the same type of flats. L lives exactly between U and C and lives in the same type of flat as U and C. Only one floor is between U and W. X lives two floors above Y.

How many floors are there in the final arrangement?

- a. Twelve
- b. Fifteen
- c. Seventeen
- d. Ten
- e. Eight

17. Questions

Who among the following person lives on the ninth floor of flat 1?

- a. The one who lives on the same floor as C
- b. J
- c. The one who lives to the east of L
- d. The one who lives to the west of U
- e. D

18. Questions

Which of the following statement is correct with respect to C?

- a. C lives below fifth floor
- b. C lives on an odd numbered flat
- c. M lives two floors below C
- d. Both b and c
- e. Both a and c

@QuizByMickey

19. Questions

Who among the following person lives five floors above L?

- I). The one who lives immediately below the flat of J
- II). The one who lives eight floors above C
- III). D
- a. All I, II and III

- b. Only I
- c. Only I and II
- d. Only II and III
- e. Only II

20. Questions

On which of the following floor and flat does X live?

- a. 10th floor, flat 1
- b. 3rd floor, flat 2
- c. 8th floor, flat 2
- d. 11th floor, flat 1
- e. 9th floor, flat 2

Explanations:

1. Questions

- The first element is a symbol that represents the first letter of the word. Each first letter of the word has a symbol. T→@, P→ &, G→%, and S→#.
- The second element is the letter, which is the succeeding letter of the second letter from the left end of each word, as per the English alphabetical series. For example: A→B, B→C.
- The third element represents the position of the last letter (as per the English alphabetical series) of each word. If the position of the letter is a two-digit number, then add the digits together to form a single digit. For example: P→ 16th letter of the alphabetical series →1+6=7

@QuizByMickey

Words	Codes
Tulip	@V7
Stack	#U2

Tiger	@J9
Pink	&J2
Goals	%P1
Sheets	#I1
Glory	%M7
Poem	&P4
Taste	@B5
Sugar	#V9

Answer: D

The code for the word “Tense” in the given code language is @F5

@ → Symbol for the first letter T.

F → The succeeding letter as per the alphabetical series of the second letter of the word i.e E.

5 → Here the last letter is E and the position number of the letter is 5.

2. Questions

- The first element is a symbol that represents the first letter of the word. Each first letter of the word has a symbol. T→@, P→ &, G→%, and S→#.
- The second element is the letter, which is the succeeding letter of the second letter from the

left end of each word, as per the English alphabetical series. For example: A→B, B→C.

- The third element represents the position of the last letter (as per the English alphabetical series) of each word. If the position of the letter is a two-digit number, then add the digits together to form a single digit. For example: P→ 16th letter of the alphabetical series →1+6=7

@QuizByMickey

Answer: A

The code for the phrase “Mark Proof” in the given code language is \$B2 &S6.

For Mark; \$B2→ \$ →Symbol for the first letter M.

B → The succeeding letter as per the alphabetical series of the second letter of the word i.e A.

2 → Here the last letter is K and the position number of the letter is 11, So add it together 1+1=2

For Proof; &S6; → Symbol for the first letter P.

S → The succeeding letter as per the alphabetical series of the second letter of the word i.e R.

6 → Here the last letter is F and the position number of the letter is 6.

3. Questions

- The first element is a symbol that represents the first letter of the word. Each first letter of the word has a symbol. T→@, P→ &, G→%, and S→#.
- The second element is the letter, which is the succeeding letter of the second letter from the left end of each word, as per the English alphabetical series. For example: A→B, B→C.
- The third element represents the position of the last letter (as per the English alphabetical series) of each word. If the position of the letter is a two-digit number, then add the digits together to form a single digit. For example: P→ 16th letter of the alphabetical series →1+6=7

Sugar	#V9

Answer: C

The phrase for the code “@S5 &P2” in the given code language is True Point.

@S5 → True → @ denotes the first letter of the word that is T, S denotes the succeeding letter of the second letter of the word i.e. R and 2 denote the position number of the last letter of the word as per the English alphabetical series.

&P2 → Point → & denotes the first letter of the word that is P, P denotes the succeeding letter of the second letter of the word i.e., O and 2 denotes the position number of the last letter of the word as per the English alphabetical series i.e., 20 → 2+0=2.

4. Questions

- The first element is a symbol that represents the first letter of the word. Each first letter of the word has a symbol. T→@, P→ &, G→%, and S→#.
- The second element is the letter, which is the succeeding letter of the second letter from the left end of each word, as per the English alphabetical series. For example: A→B, B→C.

Sugar	#V9

@QuizByMickey

Answer: E

The code for the phrase “Grape sugar soups” in the given code language is→ #V9 %S5 #P1

Grape → %S5→ % denotes G, S denotes the succeeding letter of R, and 5 denotes the position number of the last letter as per the English Alphabetical series.

Sugar $\rightarrow$ #V9 $\rightarrow$ # denotes S, V denotes the succeeding letter of U, and 9 denotes the position number of the last letter as per the English Alphabetical series, i.e, $R=18=1+8=9$.

Soups $\rightarrow$ #P1 $\rightarrow$ # denotes S, P denotes the succeeding letter of O, and 1 denotes the position number of the last letter as per the English Alphabetical series i.e, $S=19=1+9=10 \rightarrow 1$.

5. Questions

- The first element is a symbol that represents the first letter of the word. Each first letter of the word has a symbol. T $\rightarrow$ @, P $\rightarrow$ &, G $\rightarrow$ %, and S $\rightarrow$ #.
- The second element is the letter, which is the succeeding letter of the second letter from the left end of each word, as per the English alphabetical series. For example: A $\rightarrow$ B, B $\rightarrow$ C.
- The third element represents the position of the last letter (as per the English alphabetical series) of each word. If the position of the letter is a two-digit number, then add the digits together to form a single digit. For example: P $\rightarrow$ 16th letter of the alphabetical series $\rightarrow 1+6=7$

Taste	@B5
Sugar	#V9

Answer: B

The word that represents the code “%S7” in the given code language is Grasp.

%S7→ % denotes G. S denotes the succeeding letter of R and 7 denotes the position number of the last letter as per the English Alphabetical Series i.e

P= 16=1+6=7.

6. Questions

Final arrangement:

@QuizByMickey

We have,

- N sits third to the left of E but doesn't sit at the extreme ends.
- One person sits between O and the one who sits immediately in front or behind E.
- One person sits between N and J.

From the above conditions, there are four possibilities.

Again, we have,

- As many persons sit to the right of O as to the left of M.
- L sits in the same row as M but does not sit opposite to E.
- The number of persons sitting between L and K is **two more than** the number of persons sitting between G and C.
- H sits immediate right of D. G sits second to the right of H.

@QuizByMickey

Again, we have

- F sits one of the positions to the left of B.
- The one who sits immediately in front of F sits immediately behind the one who sits immediate right of I.

From the above conditions, Case 2, Case 3 and Case 4 get eliminated because the one who sits immediately in front of F sits immediately behind the one who sits immediate right of I, which is not satisfied. Hence, Case 1 is the final arrangement.

Answer: B

7. Questions

Final arrangement:

We have,

- N sits third to the left of E but doesn't sit at the extreme ends.
- One person sits between O and the one who sits immediately in front or behind E.
- One person sits between N and J.

From the above conditions, there are four possibilities.

Again, we have,

- As many persons sit to the right of O as to the left of M.
- L sits in the same row as M but does not sit opposite to E.
- The number of persons sitting between L and K is **two more than** the number of persons sitting between G and C.
- H sits immediate right of D. G sits second to the right of H.

Again, we have

- F sits one of the positions to the left of B.
- The one who sits immediately in front of F sits immediately behind the one who sits immediate right of I.

From the above conditions, Case 2, Case 3 and Case 4 get eliminated because the one who sits immediately in front of F sits immediately behind the one who sits immediate right of I, which is not satisfied. Hence, Case 1 is the final arrangement.

Answer: E

8. Questions

Final arrangement:

We have,

- N sits third to the left of E but doesn't sit at the extreme ends.
- One person sits between O and the one who sits immediately in front or behind E.
- One person sits between N and J.

From the above conditions, there are four possibilities.

Again, we have,

- As many persons sit to the right of O as to the left of M.
- L sits in the same row as M but does not sit opposite to E.
- The number of persons sitting between L and K is **two more than** the number of persons sitting between G and C.
- H sits immediate right of D. G sits second to the right of H.

Again, we have

- F sits one of the positions to the left of B.
- The one who sits immediately in front of F sits immediately behind the one who sits immediate right of I.

From the above conditions, Case 2, Case 3 and Case 4 get eliminated because the one who sits immediately in front of F sits immediately behind the one who sits immediate right of I, which is not satisfied. Hence, Case 1 is the final arrangement.

Answer: D (All the persons are sit at one of the ends, except option d)

9. Questions

Final arrangement:

We have,

- N sits third to the left of E but doesn't sit at the extreme ends.
- One person sits between O and the one who sits immediately in front or behind E.
- One person sits between N and J.

From the above conditions, there are four possibilities.

Again, we have,

- As many persons sit to the right of O as to the left of M.
- L sits in the same row as M but does not sit opposite to E.
- The number of persons sitting between L and K is **two more than** the number of persons sitting between G and C.
- H sits immediate right of D. G sits second to the right of H.

Again, we have

- F sits one of the positions to the left of B.
- The one who sits immediately in front of F sits immediately behind the one who sits immediate right of I.

From the above conditions, Case 2, Case 3 and Case 4 get eliminated because the one who sits immediately in front of F sits immediately behind the one who sits immediate right of I, which is not satisfied. Hence, Case 1 is the final arrangement.

Answer: B

10. Questions

Final arrangement:

We have,

- N sits third to the left of E but doesn't sit at the extreme ends.
- One person sits between O and the one who sits immediately in front or behind E.
- One person sits between N and J.

From the above conditions, there are four possibilities.

Again, we have,

- As many persons sit to the right of O as to the left of M.
- L sits in the same row as M but does not sit opposite to E.
- The number of persons sitting between L and K is **two more than** the number of persons sitting between G and C.
- H sits immediate right of D. G sits second to the right of H.

Again, we have

- F sits one of the positions to the left of B.
- The one who sits immediately in front of F sits immediately behind the one who sits immediate right of I.

From the above conditions, Case 2, Case 3 and Case 4 get eliminated because the one who sits immediately in front of F sits immediately behind the one who sits immediate right of I, which is not satisfied. Hence, Case 1 is the final arrangement.

Answer: A

11. Questions

Final arrangement:

Shelves	Boxes	Balloons
6	C	24
5	E	40
4	F	16
3	A	48
2	D	32
1	B	36

We have,

- Box A is kept two boxes above the box which contains 36 balloons.
- As many boxes kept above the box which contains 36 balloons as below C.
- One box is kept between C and the box which contains 16 balloons, which is not kept on the second shelf.

From the above conditions, there are two possibilities.

Shelves	Case 1		Case 2	
	Box	Ballons	Box	Balloons
6	C		A	
5				
4		16		36
3	A		C	
2				
1		36		16

Again, we have

- Box F is kept two boxes above box D.
- Box E contains 40 balloons.
- Box A contains the highest number of balloons, and the sum of the number of balloons in boxes

@QuizByMickey

D and F is equal to the number of balloons with A.

Shelves	Case 1		Case 2	
	Box	Ballons	Box	Balloons
6	C		A	48
5	E	40	E	40
4	F	16	F	36
3	A	48	C	
2	D	32	D	12
1	B	36	B	16

Again, we have

- The difference between the number of balloons in the box which contains 16 balloons and the box which is kept immediately above it is equal to the number of balloons in box C.

From the above conditions, Case 2 gets eliminated because none of the boxes contains less than 10 balloons.

Hence, Case 1 is the final arrangement.

Shelves	Case 1		Case 2	
	Box	Ballons	Box	Balloons
6	C	24	A	48

- Box A is kept two boxes above the box which contains 36 balloons.
- As many boxes kept above the box which contains 36 balloons as below C.
- One box is kept between C and the box which contains 16 balloons, which is not kept on the second shelf.

From the above conditions, there are two possibilities.

Shelves	Case 1		Case 2	
	Box	Ballons	Box	Balloons
6	C		A	
5				
4		16		36
3	A		C	
2				
1		36		16

@QuizByMickey

Again, we have

- Box F is kept two boxes above box D.
- Box E contains 40 balloons.
- Box A contains the highest number of balloons, and the sum of the number of balloons in boxes D and F is equal to the number of balloons with A.

Shelves	Case 1		Case 2	
	Box	Ballons	Box	Balloons
6	C		A	48
5	E	40	E	40
4	F	16	F	36
3	A	48	C	
2	D	32	D	12
1	B	36	B	16

Again, we have

- The difference between the number of balloons in the box which contains 16 balloons and the box which is kept immediately above it is equal to the number of balloons in box C.

From the above conditions, Case 2 gets eliminated because none of the boxes contains less than 10 balloons.

Hence, Case 1 is the final arrangement.

Shelves	Case 1		Case 2	
	Box	Ballons	Box	Balloons
6	C	24	A	48
5	E	40	E	40
4	F	16	F	36
3	A	48	C	4
2	D	32	D	12
1	B	36	B	16

Answer: E

15. Questions

Final arrangement:

@QuizByMickey

Shelves	Boxes	Balloons
6	C	24
5	E	40
4	F	16
3	A	48
2	D	32
1	B	36

We have,

- Box A is kept two boxes above the box which contains 36 balloons.
- As many boxes kept above the box which contains 36 balloons as below C.
- One box is kept between C and the box which contains 16 balloons, which is not kept on the second shelf.

From the above conditions, there are two possibilities.

Shelves	Case 1		Case 2	
	Box	Ballons	Box	Balloons
6	C		A	
5				
4		16		36
3	A		C	
2				
1		36		16

@QuizByMickey

Again, we have

- Box F is kept two boxes above box D.
- Box E contains 40 balloons.
- Box A contains the highest number of balloons, and the sum of the number of balloons in boxes D and F is equal to the number of balloons with A.

Shelves	Case 1		Case 2	
	Box	Ballons	Box	Balloons
6	C		A	48
5	E	40	E	40
4	F	16	F	36
3	A	48	C	
2	D	32	D	12
1	B	36	B	16

Again, we have

- The difference between the number of balloons in the box which contains 16 balloons and the box which is kept immediately above it is equal to the number of balloons in box C.

From the above conditions, Case 2 gets eliminated because none of the boxes contains less than 10 balloons.

Hence, Case 1 is the final arrangement.

Shelves	Case 1		Case 2	
	Box	Ballons	Box	Balloons
6	C	24	A	48
5	E	40	E	40
4	F	16	F	36
3	A	48	C	4
2	D	32	D	12
1	B	36	B	16

Answer: C

16. Questions

Final arrangement:

@QuizByMickey

Floors	Flat 1	Flat 2
12		J
11	X	W
10		
9	Y	U
8		
7	V	
6		L
5	K	
4		
3		C
2		
1	D	M

We have,

- Only one floor is between V and K's floors, where both of them live on the 5th and 7th in the same type of flat.
- W lives four floors above V, but not in the same type of flat.
- J lives immediately above W.

From the above conditions, there are four possibilities.

@QuizByMickey

Floors	Case 1		Case 2		Case 3		Case 4	
	Flat 1	Flat 2	Flat 1	Flat 2	Flat 1	Flat 2	Flat 1	Flat 2
12	J/	J/			J/	J/		
11		W			W			
10			J/	J/			J/	J/
9				W			W	
8								
7	V		K			V		K
6								
5	K		V			K		V
4								
3								
2								
1								

Again, we have

- Only three floors are between K and D.
- As many floors below J as above M, where none of them live on an odd-numbered flat.
- No one lives below M.
- D and M live on the same floor.
- Only two floors are between J and Y, who lives to the northwest of M.

From the above conditions, Case 2 and Case 4 get eliminated because D and M live on the same floor, which is not satisfied.

Floors	Case 1		Case 2		Case 3		Case 4	
	Flat 1	Flat 2	Flat 1	Flat 2	Flat 1	Flat 2	Flat 1	Flat 2
12		J				J		
11		W			W			
10				J				J
9	Y			W	Y		W	
8								
7	V		K			V	Y	K
6								
5	K		V			K		V
4								
3			D				D	
2								
1	D	M		M	D	M		M

Again, we have

- The number of floors above W is **one less** than the number of floors below C, where both are living in the same type of flats.
- L lives exactly between U and C and lives in the same type of flat as U and C.
- Only one floor is between U and W.
- X lives two floors above Y.

From the above conditions, Case 3 gets eliminated because L lives exactly between U and C and lives in the same type of flat as U and C, which is not satisfied.

Hence, Case 1 shows the final arrangement.

Floors	Case 1		Case 3	
	Flat 1	Flat 2	Flat 1	Flat 2
12		J		J
11	X	W	W	
10				
9	Y	U	Y	U
8				
7	V			V
6		L		
5	K			K
4				
3		C	C	
2				
1	D	M	D	M

Answer: A

17. Questions

Final arrangement:

@QuizByMickey

Floors	Flat 1	Flat 2
