

1. Questions

Study the following information carefully and answer the below questions.

Ten persons I-R were born in ten different months from January to October in the same year 2015. Only one person is born in each month.

R was born in the month which has an odd number of days. Q was born four months after R. As many persons were born before R as after L. Only two persons were born between L and I. N was born three months before O, who doesn't born adjacent to L. The number of persons born between N and I is **two more than** the number of persons born before J. K was not born in the month which has an even number of days. Only two persons were born between P and M. Neither K nor R was born adjacent to M. P is not older than L.

M was born in which of the following month as per the final arrangement?

- a. Immediately after R
- b. Two months after O
- c. Five months before K
- d. Three months after Q
- e. Six months before L

2. Questions

If R is related to May and Q is related to September in a certain way, then in the same way, who among the following persons is related to March?

- a. The one who was born three months before O
- b. The one who was born immediately after P
- c. The one who was born four months before M
- d. The one who was born two months after J
- e. The one who was born five months before K

3. Questions

Who among the following person was born three months before the one who was born immediately after Q as per the final arrangement?

- a. The one who was born in March
- b. The one who was born in July
- c. The one who was born in May
- d. The one who was born in January
- e. The one who was born in April

@QuizByMickey

4. Questions

Which of the following statement (s) is/are TRUE with respect to the final arrangement?

- a. I was born in February
- b. Only two persons were born between O and P
- c. J was born immediately after R
- d. The one who was born in October was born immediately after M
- e. All the given statements are false

5. Questions

As many persons were born between ____ and ____ as after L.

- a. N and M
- b. R and Q
- c. K and P
- d. J and I
- e. O and K

6. Questions

Study the following information carefully and answer the given questions.

A certain number of floors are there in the flat whereas the bottommost floor is numbered as 1, the one above that is numbered as 2 and so on. Each floor has a different number of rooms.

Note:- The number of rooms in each floor is multiple of one more than the position of the floor from the bottom. Not more than fifteen floors are there in a flat.

G lives immediately below the floor which has 45 rooms. G lives two floors below L, who lives on the floor which has 36 rooms. Only two floors are between L and U. The number of floors between G and L is **one more than** the number of floors between U and the floor which has 88 rooms. M lives on the floor which has 70 rooms and lives adjacent to W. M lives neither below U nor adjacent to L. Only three floors are between W and the floor which has 56 rooms. As many floors are below G as between M and Y, who doesn't live on the floor which has 56 rooms. The floor, which has 96 rooms, is adjacent to the floor of Y. Only three floors are between D and the floor which has 88 rooms. The number of floors above D is **one less than** the number of floors below L.

How many floors are above the floor which has 96 rooms based on the final arrangement?

- a. As many floors below the floor which has 36 rooms
- b. As many floors between U and W
- c. As many floors between L and M
- d. As many floors above Y

- e. As many floors between D and G

7. Questions

What is the position of U with respect to Y based on the final arrangement?

- a. Two floors below
- b. Four floors above
- c. Three floors below
- d. Immediately above
- e. Four floors below

8. Questions

If J lives immediately below G, then how many floors are between J and the floor which has 56 rooms?

- a. Six
- b. Three
- c. Four
- d. Two
- e. One

9. Questions

How many floors are there in the flat according to the final arrangement?

- a. Fourteen
- b. Thirteen
- c. Twelve
- d. Fifteen
- e. Nine

@QuizByMickey

10. Questions

Four of the following five are alike in a certain way and hence form a group. Which of the following does not belong to the group with respect to the final arrangement?

- a. The floor which has 96 rooms
- b. M
- c. The floor which has 88 rooms
- d. The floor which has 56 rooms

e. G

11. Questions

Study the following information carefully and answer the given questions.

If "1" is added to the even digits and "2" is subtracted from the odd digits of the given numbers, after that remove all the repeated digits in each number and add all the remaining digits within the number thus formed, then which of the following numbers yields the highest resultant?

- a. 5283749362
- b. 7932635842
- c. 6384359272
- d. 9548273564
- e. None of these

12. Questions

If all the digits within the given number are arranged in an ascending order from right to left and then reverse the second half of the number, then which of the following number will give a resultant value more than 10 when the sum of the second digit from the left end and the third digit from the right end is taken after the rearrangement?

I). 72836459

II). 59835721

III). 63824952

- a. Only I and II
- b. Only I
- c. Only I and III
- d. Only III and II
- e. All I, II, III

13. Questions

@QuizByMickey

If the letters of each word are arranged in reverse alphabetical order within the word from left to right after that the exact middle letter of each word is taken, then which of the following options makes a three letter meaningful word when using each letter only once?

- a. Field, Large, Mixer
- b. Fruit, Heart, Focus
- c. Blame, Intro, Magic
- d. Event, Drink, Broke

e. Novel, Adult, Young

14. Questions

If all the letters in the following words are arranged in alphabetical order from left to right, after that form a meaningful word from all the letters which are remain unchanged in their position in all words, using only once and arranged the letters in alphabetical order from left to right from the newly formed word, then how many letters remain unchanged in their position from the meaningful word thus formed?

I). CONSTRUCTION

II). TRANSPARENCY

III). OVERTHINK

- a. Three
- b. Two
- c. One
- d. More than three
- e. None of the above

15. Questions

If all the digits are added within the number, after that add the highest and the lowest numbers among the resultant in each row thus formed, then which of the following rows obtained a prime number as a final resultant?

I). 6584, 9854, 6275

II). 6492, 8288, 7798

III). 3678, 9467, 2612

- a. Only I
- b. Only II
- c. Only II and III
- d. Only I and III
- e. Only III

@QuizByMickey

16. Questions

Statement:

A new fitness app claims it can significantly improve users' health because people who use it report higher energy levels and lower stress. Critics argue the app is not effective, since it is just a tracking tool.

Which of the following, if true, most seriously weakens the critics' argument?

- a. People who use the app also tend to exercise more regularly than those who do not
- b. The app has already been downloaded by over one million users
- c. The company behind the app spends heavily on advertising
- d. Many users stop using the app after just a few weeks
- e. Competing fitness apps offer similar features

17. Questions

Statement:

A company wants to switch from office work to full-time remote work, claiming it will save money on rent. Some managers argue that productivity will decline because employees won't collaborate as effectively.

Which of the following, if true, most seriously weakens the managers' argument?

- a. The company will provide employees with allowances to set up home offices
- b. Remote workers often save time by not having to commute
- c. The company already uses advanced collaboration tools that allow teams to work effectively online
- d. Many employees have expressed concerns about losing daily social interaction
- e. Some competitors continue to operate successfully in offices

18. Questions

Statement:

A town plans to raise taxes to improve its public transportation system. Opponents argue the plan is unnecessary, because most people in the town already own cars.

Which of the following, if true, most seriously weakens the opponents' argument?

- a. The town's population has been steadily increasing
- b. A significant portion of the town's residents cannot drive due to age or disability
- c. The new transportation system would include modern buses and trains
- d. Many residents use their cars to commute long distances
- e. Public transportation is already available in neighboring towns

19. Questions

Statement:

Some educators argue that giving students access to calculators in classrooms weakens their basic arithmetic skills. They claim that when students rely on calculators for even simple calculations, they fail to develop mental math ability. Over time, this reliance could harm their problem-solving capacity in situations where calculators are unavailable. Therefore, schools should restrict the use of calculators to

only advanced mathematics topics.

The argument depends on which of the following assumptions?

- a. Students who do not use calculators regularly will develop strong arithmetic and problem-solving skills
- b. The absence of calculators in basic mathematics will not discourage students from learning
- c. Problem-solving in real life frequently requires mental math without the use of calculators
- d. Using calculators in advanced mathematics does not affect students' basic arithmetic ability
- e. Teachers are unable to balance calculator use with mental math practice in the classroom

20. Questions

Statement:

Many companies are shifting to remote work policies, claiming that employees are more productive when working from home. However, some experts argue that productivity gains are offset by the lack of face-to-face collaboration, which reduces innovation. Therefore, companies that fully embrace remote work may be less innovative in the long run.

The argument depends on which of the following assumptions?

- a. Innovation is more valuable to companies than short-term productivity gains
- b. Remote workers rarely engage in effective virtual collaboration
- c. Lack of in-person collaboration is not compensated for by digital communication tools
- d. Productivity and innovation cannot both be maximized in remote work settings
- e. Companies that allow hybrid work policies are less innovative than those requiring full office attendance

1. Questions

Final arrangement:

@QuizByMickey

Months	Persons
January	N
February	J
March	R
April	O
May	I
June	M
July	Q
August	L
September	P
October	K

We have,

- R was born in the month which has an odd number of days.
- Q was born four months after R.
- As many persons were born before R as after L.

From the above conditions, there are three possibilities.

@QuizByMickey

Months	Case 1	Case 2	Case 3
	Persons	Persons	Persons
January	R		
February			
March		R	
April			
May	Q		R
June			L
July		Q	
August		L	
September			Q
October	L		

Again, we have,

- Only two persons were born between L and I.
- N was born three months before O, who wasn't born adjacent to L.
- The number of persons born between N and I is **two more than** the number of persons born before J.

@QuizByMickey

Months	Case 1	Case 2	Case 3
	Persons	Persons	Persons
January	R	N	
February	J	J	J
March	N	R	I
April		O	
May	Q	I	R
June	O		L
July	I	Q	N
August		L	
September			Q
October	L		O

Again, we have,

- K was not born in the month which has an even number of days.
- Only two persons were born between P and M.
- Neither K nor R was born adjacent to M.
- P is not older than L.

From the above conditions, case-1 gets eliminated because only two persons were born between P and M, which is not satisfied.

From the above conditions, case-3 gets eliminated because P is not older than L, which is not satisfied.

Hence, case-2 shows the final arrangement.

@QuizByMickey

Months	Case 1	Case 2	Case 3
	Persons	Persons	Persons

Answer: D

6. Questions

Final arrangement:

@QuizByMickey

Floors	Persons and rooms
14	
13	
12	Y
11	96,D
10	W
9	M,70
8	U
7	88
6	56
5	L,36
4	45
3	G
2	
1	

We have,

- G lives immediately below the floor which has 45 rooms.
- G lives two floors below L, who lives on the floor which has 36 rooms.

The multiple of 36 is 4 and 6, thus in case-1 L lives on the third floor ($3+1=4$) and in case-2 L lives on the fifth floor ($5+1=6$).

- Only two floors are between L and U.

From the above conditions, there are three possibilities.

Floors	Case 1	Case 2	Case 3
8		U	
7			
6	U		
5		L,36	L,36
4		45	45
3	L,36	G	G
2	45		U
1	G		

Again, we have,

- The number of floors between G and L is **one more than** the number of floors between U and the floor which has 88 rooms.

88 is a multiple of 2,4,8 and 11. In case-1 88 is immediately above U, it is the seventh floor ($7+1=8$), In case-2 88 is immediately below U, it is the seventh floor ($7+1=8$), In case-3 88 is either immediately above or below U, it is the first floor ($1+1=2$) or it is the third floor ($3+1=4$).

- M lives on the floor, which has 70 rooms and lives adjacent to W.
- M lives neither below U nor adjacent to L.

70 is a multiple of 2, 5, 7 and 10. M lives on the ninth floor ($9+1=10$) in all cases because M neither lives below U nor adjacent to L.

- Only three floors are between W and the floor which has 56 rooms.

56 is a multiple of 2,4,7 and 8 in all cases, 56 rooms are on the sixth floor ($6+1=7$).

@QuizByMickey

Floors	Case 1	Case 2	Case 3
10	W	W	W
9	M,70	M,70	M,70
8		U	
7	88	88	
6	U,56	56	56
5		L,36	L,36
4		45	45
3	L,36	G	G,88/
2	45		U
1	G		88/

Again, we have,

- As many floors are below G as between M and Y, who doesn't live on the floor which has 56 rooms.
- The floor, which has 96 rooms, is adjacent to the floor of Y.
- Only three floors are between D and the floor which has 88 rooms.
- The number of floors above D is **one less than** the number of floors below L.

From the above conditions, case-1 gets eliminated because the floor which has 96 rooms, is adjacent to the floor of Y, which is not satisfied.

From the above conditions, case-3 gets eliminated because the number of floors above D is **one less than** the number of floors below L, which is not satisfied.

Hence, case-2 shows the final arrangement.

10	W
9	M,70
8	U
7	88
6	56
5	L,36
4	45
3	G
2	
1	

We have,

- G lives immediately below the floor which has 45 rooms.
- G lives two floors below L, who lives on the floor which has 36 rooms.

The multiple of 36 is 4 and 6, thus in case-1 L lives on the third floor ($3+1=4$) and in case-2 L lives on the fifth floor ($5+1=6$).

- Only two floors are between L and U.

From the above conditions, there are three possibilities.

Floors	Case 1	Case 2	Case 3
8		U	
7			
6	U		
5		L,36	L,36
4		45	45
3	L,36	G	G
2	45		U
1	G		

Again, we have,

- The number of floors between G and L is **one more than** the number of floors between U and the floor which has 88 rooms.

88 is a multiple of 2,4,8 and 11. In case-1 88 is immediately above U, it is the seventh floor ($7+1=8$), In case-2 88 is immediately below U, it is the seventh floor ($7+1=8$), In case-3 88 is either immediately above or below U, it is the first floor ($1+1=2$) or it is the third floor ($3+1=4$).

- M lives on the floor, which has 70 rooms and lives adjacent to W.
- M lives neither below U nor adjacent to L.

70 is a multiple of 2, 5, 7 and 10. M lives on the ninth floor ($9+1=10$) in all cases because M neither lives below U nor adjacent to L.

- Only three floors are between W and the floor which has 56 rooms.

56 is a multiple of 2,4,7 and 8 in all cases, 56 rooms are on the sixth floor ($6+1=7$).

@QuizByMickey

Floors	Case 1	Case 2	Case 3
10	W	W	W

5		L,36	L,36
4		45	45
3	L,36	G	G,88
2	45		U
1	G		

Answer: E

8. Questions

Final arrangement:

@QuizByMickey

Floors	Persons and rooms
14	
13	
12	Y
11	96,D
10	W
9	M,70
8	U
7	88
6	56
5	L,36
4	45
3	G
2	
1	

We have,

- G lives immediately below the floor which has 45 rooms.
- G lives two floors below L, who lives on the floor which has 36 rooms.

The multiple of 36 is 4 and 6, thus in case-1 L lives on the third floor ($3+1=4$) and in case-2 L lives on the fifth floor ($5+1=6$).

- Only two floors are between L and U.

From the above conditions, there are three possibilities.

Floors	Case 1	Case 2	Case 3
8		U	
7			
6	U		
5		L,36	L,36
4		45	45
3	L,36	G	G
2	45		U
1	G		

Again, we have,

- The number of floors between G and L is **one more than** the number of floors between U and the floor which has 88 rooms.

88 is a multiple of 2,4,8 and 11. In case-1 88 is immediately above U, it is the seventh floor ($7+1=8$), In case-2 88 is immediately below U, it is the seventh floor ($7+1=8$), In case-3 88 is either immediately above or below U, it is the first floor ($1+1=2$) or it is the third floor ($3+1=4$).

- M lives on the floor, which has 70 rooms and lives adjacent to W.
- M lives neither below U nor adjacent to L.

70 is a multiple of 2, 5, 7 and 10. M lives on the ninth floor ($9+1=10$) in all cases because M neither lives below U nor adjacent to L.

- Only three floors are between W and the floor which has 56 rooms.

56 is a multiple of 2,4,7 and 8 in all cases, 56 rooms are on the sixth floor ($6+1=7$).

@QuizByMickey

Floors	Case 1	Case 2	Case 3
10	W	W	W
9	M,70	M,70	M,70
8		U	
7	88	88	
6	U,56	56	56
5		L,36	L,36
4		45	45
3	L,36	G	G,88/
2	45		U
1	G		88/

Again, we have,

- As many floors are below G as between M and Y, who doesn't live on the floor which has 56 rooms.
- The floor, which has 96 rooms, is adjacent to the floor of Y.
- Only three floors are between D and the floor which has 88 rooms.
- The number of floors above D is **one less than** the number of floors below L.

From the above conditions, case-1 gets eliminated because the floor which has 96 rooms, is adjacent to the floor of Y, which is not satisfied.

From the above conditions, case-3 gets eliminated because the number of floors above D is **one less than** the number of floors below L, which is not satisfied.

Hence, case-2 shows the final arrangement.

@QuizByMickey

Floors	Case 1	Case 2	Case 3
14			
13			
12		Y	Y
11		96,D	96
10	W	W	W
9	M,70	M,70	M,70

Answer: B

9. Questions

Final arrangement:

@QuizByMickey

Floors	Persons and rooms
14	
13	
12	Y
11	96,D
10	W
9	M,70
8	U
7	88
6	56
5	L,36
4	45
3	G
2	
1	

We have,

- G lives immediately below the floor which has 45 rooms.
- G lives two floors below L, who lives on the floor which has 36 rooms.

The multiple of 36 is 4 and 6, thus in case-1 L lives on the third floor ($3+1=4$) and in case-2 L lives on the fifth floor ($5+1=6$).

- Only two floors are between L and U.

From the above conditions, there are three possibilities.

Floors	Case 1	Case 2	Case 3
8		U	
7			
6	U		
5		L,36	L,36
4		45	45
3	L,36	G	G
2	45		U
1	G		

Again, we have,

- The number of floors between G and L is **one more than** the number of floors between U and the floor which has 88 rooms.

88 is a multiple of 2,4,8 and 11. In case-1 88 is immediately above U, it is the seventh floor ($7+1=8$), In case-2 88 is immediately below U, it is the seventh floor ($7+1=8$), In case-3 88 is either immediately above or below U, it is the first floor ($1+1=2$) or it is the third floor ($3+1=4$).

- M lives on the floor, which has 70 rooms and lives adjacent to W.
- M lives neither below U nor adjacent to L.

70 is a multiple of 2, 5, 7 and 10. M lives on the ninth floor ($9+1=10$) in all cases because M neither lives below U nor adjacent to L.

- Only three floors are between W and the floor which has 56 rooms.

56 is a multiple of 2,4,7 and 8 in all cases, 56 rooms are on the sixth floor ($6+1=7$).

@QuizByMickey

Floors	Case 1	Case 2	Case 3
10	W	W	W
9	M,70	M,70	M,70
8		U	
7	88	88	
6	U,56	56	56
5		L,36	L,36
4		45	45
3	L,36	G	G,88/
2	45		U
1	G		88/

Again, we have,

- As many floors are below G as between M and Y, who doesn't live on the floor which has 56 rooms.
- The floor, which has 96 rooms, is adjacent to the floor of Y.
- Only three floors are between D and the floor which has 88 rooms.
- The number of floors above D is **one less than** the number of floors below L.

From the above conditions, case-1 gets eliminated because the floor which has 96 rooms, is adjacent to the floor of Y, which is not satisfied.

From the above conditions, case-3 gets eliminated because the number of floors above D is **one less than** the number of floors below L, which is not satisfied.

Hence, case-2 shows the final arrangement.

4	45
3	G
2	
1	

We have,

- G lives immediately below the floor which has 45 rooms.
- G lives two floors below L, who lives on the floor which has 36 rooms.

The multiple of 36 is 4 and 6, thus in case-1 L lives on the third floor ($3+1=4$) and in case-2 L lives on the fifth floor ($5+1=6$).

- Only two floors are between L and U.

From the above conditions, there are three possibilities.

Floors	Case 1	Case 2	Case 3
8		U	
7			
6	U		
5		L,36	L,36
4		45	45
3	L,36	G	G
2	45		U
1	G		

Again, we have,

- The number of floors between G and L is **one more than** the number of floors between U and the floor which has 88 rooms.

88 is a multiple of 2,4,8 and 11. In case-1 88 is immediately above U, it is the seventh floor ($7+1=8$), In case-2 88 is immediately below U, it is the seventh floor ($7+1=8$), In case-3 88 is either immediately above or below U, it is the first floor ($1+1=2$) or it is the third floor ($3+1=4$).

- M lives on the floor, which has 70 rooms and lives adjacent to W.
- M lives neither below U nor adjacent to L.

70 is a multiple of 2, 5, 7 and 10. M lives on the ninth floor ($9+1=10$) in all cases because M neither lives below U nor adjacent to L.

- Only three floors are between W and the floor which has 56 rooms.

56 is a multiple of 2,4,7 and 8 in all cases, 56 rooms are on the sixth floor ($6+1=7$).

@QuizByMickey

Floors	Case 1	Case 2	Case 3
10	W	W	W
9	M,70	M,70	M,70
8		U	
7	88	88	
6	U,56	56	56
5		L,36	L,36
4		45	45
3	L,36	G	G,88/
2	45		U
1	G		88/

Again, we have,

- As many floors are below G as between M and Y, who doesn't live on the floor which has 56 rooms.
- The floor, which has 96 rooms, is adjacent to the floor of Y.
- Only three floors are between D and the floor which has 88 rooms.
- The number of floors above D is **one less than** the number of floors below L.

From the above conditions, case-1 gets eliminated because the floor which has 96 rooms, is adjacent to the floor of Y, which is not satisfied.

From the above conditions, case-3 gets eliminated because the number of floors above D is **one less than** the number of floors below L, which is not satisfied.

Hence, case-2 shows the final arrangement.

Answer: D (All other floors are numbered as an odd-number, except option D)

11. Questions

Answer: D

5283749362 → 3391557173 → 9

7932635842 → 5713713953 → 9

6384359272 → 7195137353 → 9

9548273564 → 7359351375 → 9,1 → 9+1 = 10

12. Questions

Answer: B

D). 72836459 – 98765432

Second half of the numbers are reversed – **98762345**

@QuizByMickey

The sum $= 8 + 3 = 11$

This is satisfied.

II). 59835721 – 98755321

Second half of the numbers are reversed – 98751235

The sum $= 8 + 2 = 10$

This is not satisfied.

III). 63824952 – 98654322

Second half of the numbers are reversed – 98652234

The sum $= 8 + 2 = 10$

This is not satisfied.

13. Questions

Answer: C

a). Field, Large, Mixer – Lifed, Rlgea, Xrmie

No meaningful letter can be formed by using letters f, g and m.

b). Fruit, Heart, Focus – Utrif, Trhea, Usofc

No meaningful letter can be formed by using letters r, h and o.

c). Blame, Intro, Magic - Mleba, Troni, Migca

Only one meaningful word is **ego**

d). Event, Drink, Broke – Vtnee, Rnkid, Rekob

No meaningful letter can be formed by using letters n, k and k.

e). Novel, Adult, Young – Vonle, Utlda, Yuong

No meaningful letter can be formed by using letters n, l and o.

14. Questions

Answer: A

I). CONSTRUCTION – C C I N N O O R S T T U

II). TRANSPARENCY – A A C E N N P R R S T Y

III). OVERTHINK – E H I K N O R T V

Meaningful word = CRY

Alphabetical order left to right: **CRY**

THREE letters remain unchanged.

15. Questions

@QuizByMickey

Answer: E

I). 6584, 9854, 6275 $\rightarrow 23+26+20 \rightarrow 26+20=46$

II). 6492, 8288, 7798 $\rightarrow 21+26+31 \rightarrow 31+21=52$

III). 3678, 9467, 2612 $\rightarrow 24+26+11 \rightarrow 26+11=37$

16. Questions

Answer: A

The critics assume the app itself cannot improve health because it only tracks behavior. But if tracking directly leads to healthier habits, the argument weakens.

- a). If users exercise more regularly because of the app, then the app does improve health.
- b). Download numbers don't prove effectiveness.
- c). Advertising says nothing about results.
- d). Dropout rates might support critics, not weaken them.
- e). Similar features in competitors are irrelevant.

17. Questions

Answer: C

The managers assume lack of physical presence means poor collaboration. If technology solves this, productivity need not decline.

- a). Home office allowances help comfort but not collaboration.
- b). Saving commute time helps efficiency but doesn't guarantee teamwork.
- c). If collaboration tools already enable effective teamwork, the managers' concern is undermined.
- d). Loss of social life supports managers' worry.
- e). Competitors' office use doesn't prove this company needs offices.

18. Questions

Answer: B

The opponents assume car ownership makes better public transport unnecessary. If many people cannot drive, this assumption fails.

- a). Growth might increase need, but doesn't address the key claim.
- b). If many people cannot drive, then public transportation is clearly necessary, weakening the opponents' argument.
- c). Better design doesn't prove necessity.
- d). Long commutes by car support reliance on cars.
- e). Neighboring towns' transport doesn't solve this town's issue.

19. Questions**Answer: A**

The assumption here is that without calculators, students will naturally improve their arithmetic and problem-solving skills. If this were not true, restricting calculators would not achieve the intended goal.

- a). Correct. The reasoning rests on this assumption—otherwise banning calculators would not help.
- b). Even if some students are discouraged, the argument only focuses on arithmetic skill, not motivation.
- c). Whether real life requires mental math is not central to the argument's conclusion.
- d). This is possible but not required for the logic to hold.
- e). Teacher competence is not mentioned in the argument.

20. Questions**Answer: C**

The argument assumes that digital communication tools cannot fully replace in-person collaboration for innovation. If they could, remote work would not reduce innovation.

- a). This could support the conclusion but is not necessary for the logic.
- b). Too extreme; some virtual collaboration exists, but the argument only assumes it is less effective.
- c). Correct. This is the critical assumption; without it, the conclusion about reduced innovation would fail.
- d). Too strong; the argument does not require both to be impossible, just that innovation suffers.
- e). The argument is about fully remote work, not hybrid setups.
