

1. Questions

Study the following information carefully and answer the below questions.

Seven medical persons – Jenu, Sinu, Minu, Kittu, Pihu, Rinku, and Katty are working in an organization with different positions viz.- HOD, Chief Surgeon, Surgeon, Senior Doctor, Doctor, Nurse, and Ward Assistant. The designation of the persons is given in decreasing order such that HOD is the seniormost whereas ward assistant is the juniormost. Each person likes different fruits viz.- Mango, Apple, Orange, Papaya, Guava, Grapes, and Kiwi. All the information is not necessary in the same order.

Only two persons are junior to the one who likes Kiwi. Three persons are designated between the one who likes Kiwi and Pihu. Sinu is three positions senior to the one who likes Mango. Kittu is not designated as Surgeon. Katty is senior to Minu and the one who likes Papaya but not senior to Kittu. Minu likes neither Mango nor papaya. Sinu likes neither Papaya nor Grapes. The number of persons designated between Jenu and the one who likes Apple is one less than the number of persons senior to the one who likes Guava. Rinku doesn't like Mango. Atleast one person is designated between the one who likes Guava and the one who likes Grapes. . The one who likes Grapes is not designated as HOD.

Who among the following person likes Apple?

- a. The one who is designated as Surgeon
- b. Jenu
- c. The one who is immediately senior to Minu
- d. Pihu
- e. None of these

2. Questions

How many persons are senior to the one who likes Orange?

- a. Three
- b. As many persons junior to Jenu
- c. No one
- d. Four
- e. None of these

@QuizByMickey

3. Questions

Who among the following person is Chief Surgeon?

- a. Rinku
- b. Pihu
- c. The one who likes Grapes
- d. The one who likes Apple

e. None of these

4. Questions

Four of the following five are alike in a certain way as per the given arrangement and thus form a group. Find the one that doesn't belong to that group?

- a. Doctor – Rinku
- b. Kittu – Grapes
- c. HOD – Orange
- d. Nurse – Jenu
- e. Katty – Guava

5. Questions

Which of the following statement is not true?

- a. Minu is a Doctor
- b. Nurse doesn't like Orange
- c. The one who likes Kiwi is a Ward Assistant
- d. Pihu is the HOD
- e. All the above statements are true

6. Questions

Study the following information carefully and answer the questions given below.

Fifteen persons from A to O are sitting in three parallel rows such that all the persons are facing towards the north, but not necessarily in the same order. Row 2 is to the south of row 1 and north of row 3. None of the rows has the same number of persons. At least four persons sit in each row.

Note:

1. The first person from the left end of each row is sitting in a straight line.
2. If one person sits in a straight line with another, then the first person sits either immediately in front or immediately behind the second person.
3. If two persons sit adjacent to each other means then both persons sit in the same row.

D sits third to the left of G, who sits in a straight line with A. Only L sits adjacent to A whereas K sits second from the left end but neither in the same row as L nor D. The row in which K sits has the maximum number of persons. Only two persons sit to the left of C, who sits adjacent to neither L nor G. The number of persons sitting between D and G is one more than the number of persons sitting between C and O who sits to the right of C. N sits at the right end of the row but neither adjacent to A nor O. H sits second from one of the ends of the row and sits in a straight line with both K and J. The number of persons sitting to the right of H is one less than the number of persons sitting to the left of F. E sits in a row

immediately in front of B, who doesn't sit adjacent to H. Neither M nor I sits in the same row as B whereas I doesn't sit in a straight line with E.

How many persons sit between C and I?

- a. One
- b. Two
- c. Three
- d. None
- e. Cannot be determined

7. Questions

What is the position of N with respect to H?

- a. Third to the right of the one who sits immediately behind
- b. Second to the right of the one who sits immediately in front
- c. Third to the right in the same row
- d. Fourth to the right of the one who sits immediately behind
- e. None of these

8. Questions

Which of the following statement(s) is/are true with respect to the final arrangement?

- a. Only one person sits between E and H
- b. Both C and B sit in the same row
- c. The row in which M sits has the minimum number of persons
- d. Neither A nor G sits at any of the ends of the row
- e. None or all are true

9. Questions

Four of the following five are alike in a certain way as per the given arrangement and hence form a group. Find the one that doesn't belong to that group.

- a. BH
- b. EJ
- c. AO
- d. MN
- e. LG

@QuizByMickey

10. Questions

If O is related to N and C is related to B in a certain way, then who among the following person is related to D?

- The one who sits second to the left of C
- I
- The one who sits immediate left of A
- E
- None of these

11. Questions

A string of letter is given as input. The further steps given are obtained by applying certain logic. Each step is a resultant of previous step only. Study the following information carefully and answer the questions given below it.

As per above applied logic in above steps, find appropriate step for given input:

Input:

RING	DEAL	MILK	BARK
------	------	------	------

How many letters are there between the letters of final output in the English alphabetical series?

- Six
- Eight
- Twelve

- d. Nine
- e. None of these

12. Questions

If all the letters in step II are rearranged in reverse alphabetical order without any space from left to right then, which of the following letter will be third from the right end

- a. D
- b. J
- c. L
- d. P
- e. None of these

13. Questions

If all the letters in step I are rearranged in alphabetical order without any space from left to right then, how many letters are there in the English alphabetical series between the 3rd letter and 7th letter from the left end?

- a. Five
- b. Three
- c. Nine
- d. Six
- e. None of these

14. Questions

Find the odd one out with respect to step I?

- a. GK
- b. EH
- c. CF
- d. NP
- e. KC

@QuizByMickey

15. Questions

How many letters are there between the letters which are second from the left end in Step-III and the first letter from the right end in Step-IV as in the alphabetical series?

- a. 6

- b. 8
- c. 4
- d. 9
- e. None of these

16. Questions

Study the following information carefully and answer the questions given below.

There are nine members in a family of three generations. Each person has different number of chocolates. Married couples must have children. M has 31 chocolates, from which he gives 7 chocolates more than O to K. N is married to P and he has five times the number of chocolates with J's brother. The sum of the number of chocolates with Q and R is four more than the number of chocolate with K. O's father's mother-in-law is the only sister-in-law of L, who has 3 chocolates. L is the only sibling of J. The only couple of 1st generation has a total of 52 chocolates and gives 17 chocolates to their daughter-in-law, 15 chocolates to their son-in-law and divides the rest between them. P's only child has twice the number of chocolates with P, who has thrice the number of chocolates with L. R's only daughter has the highest number of chocolates among all the family members. The gender of O and L is the same. R is the wife of M.

What is the square of the difference between the number of chocolates with R and J, and how is R's daughter related to J's daughter?

- a. 81, niece
- b. 121, daughter
- c. 144, siblings
- d. 100, cousin
- e. 49, granddaughter

17. Questions

The sum of the number of chocolates with Q and M is the same as the number of chocolates with ____.

- a. K
- b. N
- c. O
- d. P
- e. R

@QuizByMickey

18. Questions

What is the product of the number of chocolates with R's sister-in-law and M's father and how is L related to Q's daughter?

- a. 27, grandfather
- b. 24, father-in-law
- c. 36, brother
- d. 54, husband
- e. 72, uncle

19. Questions

Which of the following statement is true?

- a. Q is the grandfather of P
- b. N has the second highest number of chocolates
- c. M is the brother of P
- d. None is true
- e. K has 15 chocolates

20. Questions

Who among the following person has the second highest number of chocolates?

- a. Q
- b. The one who has 17 chocolates
- c. N's son
- d. M's wife
- e. None of these

Explanations:**1. Questions**

@QuizByMickey

Case (1a)		
Designation	Name	Fruit
HOD	Pihu	Orange
Chief Surgeon	Kittu	Grapes
Surgeon	Sinu	Apple
Senior Doctor	Katty	Guava
Doctor	Minu	Kiwi
Nurse	Jenu	Mango
Ward Assistant	Rinku	Papaya

We have:

- Only two persons are junior to the one who likes Kiwi.
- Three persons are designated between the one who likes Kiwi and Pihu.
- Sinu is three positions senior to the one who likes Mango.

That means, in case (1) Sinu is a Surgeon, in case (2) Sinu is a senior doctor.

Based on the above given information we have:

Case (1)			Case (2)		
Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu		HOD	Pihu	
Chief Surgeon			Chief Surgeon		
Surgeon	Sinu		Surgeon		
Senior Doctor			Senior Doctor	Sinu	
Doctor		Kiwi	Doctor		Kiwi
Nurse		Mango	Nurse		
Ward Assistant			Ward Assistant		Mango

Again, we have:

- Kittu is not designated as Surgeon.
- Katty is senior to Minu and the one who likes Papaya but not senior to Kittu.
- Minu likes neither Mango nor papaya.
- Sinu likes neither Papaya nor Grapes.

That means, in case (1) & case (2) Minu likes Kiwi.

Based on the above given information we have:

@QuizByMickey

Case (1)			Case (2)		
Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu		HOD	Pihu	
Chief Surgeon	Kittu		Chief Surgeon	Kittu	
Surgeon	Sinu		Surgeon	Katty	
Senior Doctor	Katty		Senior Doctor	Sinu	
Doctor	Minu	Kiwi	Doctor	Minu	Kiwi
Nurse		Mango	Nurse		Papaya
Ward Assistant		Papaya	Ward Assistant		Mango

Again, we have:

- The number of persons designated between Jenu and the one who likes Apple is one less than the number of persons senior to the one who likes Guava.
- Rinku doesn't like Mango.

That means, in case (1) Sinu likes Guava, in case (1a) Sinu likes Apple, case (2) is not valid.

Based on the above given information we have:

Case (1)			Case (1a)			Case (2)		
Designation	Name	Fruit	Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu		HOD	Pihu		HOD	Pihu	
Chief Surgeon	Kittu		Chief Surgeon	Kittu		Chief Surgeon	Kittu	
Surgeon	Sinu	Guava	Surgeon	Sinu	Apple	Surgeon	Katty	Guava
Senior Doctor	Katty	Apple	Senior Doctor	Katty	Guava	Senior Doctor	Sinu	Apple
Doctor	Minu	Kiwi	Doctor	Minu	Kiwi	Doctor	Minu	Kiwi
Nurse	Jenu	Mango	Nurse	Jenu	Mango	Nurse	Jenu	Papaya
Ward Assistant	Rinku	Papaya	Ward Assistant	Rinku	Papaya	Ward Assistant	Rinku	Mango

Again, we have:

- Atleast one person is designated between the one who likes Guava and the one who likes Grapes.
- The one who likes Grapes is not designated as HOD.

That means, in case (1a) the one who is HOD likes Orange, and Kittu likes Grapes, case (1) is not valid.

Based on the above given information we have:

Case (1)			Case (1a)		
Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu	Orange	HOD	Pihu	Orange
Chief Surgeon	Kittu	Grapes	Chief Surgeon	Kittu	Grapes
Surgeon	Sinu	Guava	Surgeon	Sinu	Apple
Senior Doctor	Katty	Apple	Senior Doctor	Katty	Guava
Doctor	Minu	Kiwi	Doctor	Minu	Kiwi
Nurse	Jenu	Mango	Nurse	Jenu	Mango
Ward Assistant	Rinku	Papaya	Ward Assistant	Rinku	Papaya

Case (1a) is not valid as the one who likes Guava is designated adjacent designation of either the one who likes Apple or Grapes.

Answer: A

2. Questions

Case (1a)		
Designation	Name	Fruit
HOD	Pihu	Orange
Chief Surgeon	Kittu	Grapes
Surgeon	Sinu	Apple
Senior Doctor	Katty	Guava
Doctor	Minu	Kiwi
Nurse	Jenu	Mango
Ward Assistant	Rinku	Papaya

We have:

- Only two persons are junior to the one who likes Kiwi.
- Three persons are designated between the one who likes Kiwi and Pihu.
- Sinu is three positions senior to the one who likes Mango.

That means, in case (1) Sinu is a Surgeon, in case (2) Sinu is a senior doctor.

Based on the above given information we have:

Case (1)			Case (2)		
Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu		HOD	Pihu	
Chief Surgeon			Chief Surgeon		
Surgeon	Sinu		Surgeon		
Senior Doctor			Senior Doctor	Sinu	
Doctor		Kiwi	Doctor		Kiwi
Nurse		Mango	Nurse		
Ward Assistant			Ward Assistant		Mango

Again, we have:

- Kittu is not designated as Surgeon.
- Katty is senior to Minu and the one who likes Papaya but not senior to Kittu.
- Minu likes neither Mango nor papaya.
- Sinu likes neither Papaya nor Grapes.

That means, in case (1) & case (2) Minu likes Kiwi.

Based on the above given information we have:

Case (1)			Case (2)		
Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu		HOD	Pihu	
Chief Surgeon	Kittu		Chief Surgeon	Kittu	
Surgeon	Sinu		Surgeon	Katty	
Senior Doctor	Katty		Senior Doctor	Sinu	
Doctor	Minu	Kiwi	Doctor	Minu	Kiwi
Nurse		Mango	Nurse		Papaya
Ward Assistant		Papaya	Ward Assistant		Mango

Again, we have:

- The number of persons designated between Jenu and the one who likes Apple is one less than the number of persons senior to the one who likes Guava.
- Rinku doesn't like Mango.

That means, in case (1) Sinu likes Guava, in case (1a) Sinu likes Apple, case (2) is not valid.

Based on the above given information we have:

Case (1)			Case (1a)			Case (2)		
Designation	Name	Fruit	Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu		HOD	Pihu		HOD	Pihu	
Chief Surgeon	Kittu		Chief Surgeon	Kittu		Chief Surgeon	Kittu	
Surgeon	Sinu	Guava	Surgeon	Sinu	Apple	Surgeon	Katty	Guava
Senior Doctor	Katty	Apple	Senior Doctor	Katty	Guava	Senior Doctor	Sinu	Apple
Doctor	Minu	Kiwi	Doctor	Minu	Kiwi	Doctor	Minu	Kiwi
Nurse	Jenu	Mango	Nurse	Jenu	Mango	Nurse	Jenu	Papaya
Ward Assistant	Rinku	Papaya	Ward Assistant	Rinku	Papaya	Ward Assistant	Rinku	Mango

Again, we have:

- Atleast one person is designated between the one who likes Guava and the one who likes Grapes.
- The one who likes Grapes is not designated as HOD.

That means, in case (1a) the one who is HOD likes Orange, and Kittu likes Grapes, case (1) is not valid.

Based on the above given information we have:

Case (1)			Case (1a)		
Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu	Orange	HOD	Pihu	Orange
Chief Surgeon	Kittu	Grapes	Chief Surgeon	Kittu	Grapes
Surgeon	Sinu	Guava	Surgeon	Sinu	Apple
Senior Doctor	Katty	Apple	Senior Doctor	Katty	Guava
Doctor	Minu	Kiwi	Doctor	Minu	Kiwi
Nurse	Jenu	Mango	Nurse	Jenu	Mango
Ward Assistant	Rinku	Papaya	Ward Assistant	Rinku	Papaya

Case (1a) is not valid as the one who likes Guava is designated adjacent designation of either the one who likes Apple or Grapes.

Answer: C

3. Questions

@QuizByMickey

Case (1a)		
Designation	Name	Fruit
HOD	Pihu	Orange
Chief Surgeon	Kittu	Grapes
Surgeon	Sinu	Apple
Senior Doctor	Katty	Guava
Doctor	Minu	Kiwi
Nurse	Jenu	Mango
Ward Assistant	Rinku	Papaya

We have:

- Only two persons are junior to the one who likes Kiwi.
- Three persons are designated between the one who likes Kiwi and Pihu.
- Sinu is three positions senior to the one who likes Mango.

That means, in case (1) Sinu is a Surgeon, in case (2) Sinu is a senior doctor.

Based on the above given information we have:

Case (1)			Case (2)		
Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu		HOD	Pihu	
Chief Surgeon			Chief Surgeon		
Surgeon	Sinu		Surgeon		
Senior Doctor			Senior Doctor	Sinu	
Doctor		Kiwi	Doctor		Kiwi
Nurse		Mango	Nurse		
Ward Assistant			Ward Assistant		Mango

Again, we have:

- Kittu is not designated as Surgeon.
- Katty is senior to Minu and the one who likes Papaya but not senior to Kittu.
- Minu likes neither Mango nor papaya.
- Sinu likes neither Papaya nor Grapes.

That means, in case (1) & case (2) Minu likes Kiwi.

Based on the above given information we have:

@QuizByMickey

Case (1)			Case (2)		
Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu		HOD	Pihu	
Chief Surgeon	Kittu		Chief Surgeon	Kittu	
Surgeon	Sinu		Surgeon	Katty	
Senior Doctor	Katty		Senior Doctor	Sinu	
Doctor	Minu	Kiwi	Doctor	Minu	Kiwi
Nurse		Mango	Nurse		Papaya
Ward Assistant		Papaya	Ward Assistant		Mango

Again, we have:

- The number of persons designated between Jenu and the one who likes Apple is one less than the number of persons senior to the one who likes Guava.
- Rinku doesn't like Mango.

That means, in case (1) Sinu likes Guava, in case (1a) Sinu likes Apple, case (2) is not valid.

Based on the above given information we have:

Case (1)			Case (1a)			Case (2)		
Designation	Name	Fruit	Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu		HOD	Pihu		HOD	Pihu	
Chief Surgeon	Kittu		Chief Surgeon	Kittu		Chief Surgeon	Kittu	
Surgeon	Sinu	Guava	Surgeon	Sinu	Apple	Surgeon	Katty	Guava
Senior Doctor	Katty	Apple	Senior Doctor	Katty	Guava	Senior Doctor	Sinu	Apple
Doctor	Minu	Kiwi	Doctor	Minu	Kiwi	Doctor	Minu	Kiwi
Nurse	Jenu	Mango	Nurse	Jenu	Mango	Nurse	Jenu	Papaya
Ward Assistant	Rinku	Papaya	Ward Assistant	Rinku	Papaya	Ward Assistant	Rinku	Mango

Again, we have:

- Atleast one person is designated between the one who likes Guava and the one who likes Grapes.
- The one who likes Grapes is not designated as HOD.

That means, in case (1a) the one who is HOD likes Orange, and Kittu likes Grapes, case (1) is not valid.

Based on the above given information we have:

Case (1)			Case (1a)		
Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu	Orange	HOD	Pihu	Orange
Chief Surgeon	Kittu	Grapes	Chief Surgeon	Kittu	Grapes
Surgeon	Sinu	Guava	Surgeon	Sinu	Apple
Senior Doctor	Katty	Apple	Senior Doctor	Katty	Guava
Doctor	Minu	Kiwi	Doctor	Minu	Kiwi
Nurse	Jenu	Mango	Nurse	Jenu	Mango
Ward Assistant	Rinku	Papaya	Ward Assistant	Rinku	Papaya

Case (1a) is not valid as the one who likes Guava is designated adjacent designation of either the one who likes Apple or Grapes.

Answer: C

4. Questions

Case (1a)		
Designation	Name	Fruit
HOD	Pihu	Orange
Chief Surgeon	Kittu	Grapes
Surgeon	Sinu	Apple
Senior Doctor	Katty	Guava
Doctor	Minu	Kiwi
Nurse	Jenu	Mango
Ward Assistant	Rinku	Papaya

We have:

- Only two persons are junior to the one who likes Kiwi.
- Three persons are designated between the one who likes Kiwi and Pihu.
- Sinu is three positions senior to the one who likes Mango.

That means, in case (1) Sinu is a Surgeon, in case (2) Sinu is a senior doctor.

Based on the above given information we have:

Case (1)			Case (2)		
Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu		HOD	Pihu	
Chief Surgeon			Chief Surgeon		
Surgeon	Sinu		Surgeon		
Senior Doctor			Senior Doctor	Sinu	
Doctor		Kiwi	Doctor		Kiwi
Nurse		Mango	Nurse		
Ward Assistant			Ward Assistant		Mango

Again, we have:

- Kittu is not designated as Surgeon.
- Katty is senior to Minu and the one who likes Papaya but not senior to Kittu.
- Minu likes neither Mango nor papaya.
- Sinu likes neither Papaya nor Grapes.

That means, in case (1) & case (2) Minu likes Kiwi.

Based on the above given information we have:

Case (1)			Case (2)		
Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu		HOD	Pihu	
Chief Surgeon	Kittu		Chief Surgeon	Kittu	
Surgeon	Sinu		Surgeon	Katty	
Senior Doctor	Katty		Senior Doctor	Sinu	
Doctor	Minu	Kiwi	Doctor	Minu	Kiwi
Nurse		Mango	Nurse		Papaya
Ward Assistant		Papaya	Ward Assistant		Mango

Again, we have:

- The number of persons designated between Jenu and the one who likes Apple is one less than the number of persons senior to the one who likes Guava.
- Rinku doesn't like Mango.

That means, in case (1) Sinu likes Guava, in case (1a) Sinu likes Apple, case (2) is not valid.

Based on the above given information we have:

Case (1)			Case (1a)			Case (2)		
Designation	Name	Fruit	Designation	Name	Fruit	Designation	Name	Fruit
HOD	Pihu		HOD	Pihu		HOD	Pihu	
Chief Surgeon	Kittu		Chief Surgeon	Kittu		Chief Surgeon	Kittu	
Surgeon	Sinu	Guava	Surgeon	Sinu	Apple	Surgeon	Katty	Guava
Senior Doctor	Katty	Apple	Senior Doctor	Katty	Guava	Senior Doctor	Sinu	Apple
Doctor	Minu	Kiwi	Doctor	Minu	Kiwi	Doctor	Minu	Kiwi
Nurse	Jenu	Mango	Nurse	Jenu	Mango	Nurse	Jenu	Papaya
Ward Assistant	Rinku	Papaya	Ward Assistant	Rinku	Papaya	Ward Assistant	Rinku	Mango

Again, we have:

- Atleast one person is designated between the one who likes Guava and the one who likes Grapes.
- The one who likes Grapes is not designated as HOD.

That means, in case (1a) the one who is HOD likes Orange, and Kittu likes Grapes, case (1) is not valid.

Based on the above given information we have:

Case (1)			Case (1a)		
Designation	Name	Fruit	Designation	Name	Fruit

Doctor	Minu	Kiwi	Doctor	Minu	Kiwi
Nurse	Jenu	Mango	Nurse	Jenu	Mango
Ward Assistant	Rinku	Papaya	Ward Assistant	Rinku	Papaya

Case (1a) is not valid as the one who likes Guava is designated adjacent designation of either the one who likes Apple or Grapes.

Answer: C

6. Questions

- D sits third to the left of G, who sits in a straight line with A.
- Only L sits adjacent to A whereas K sits second from the left end but neither in the same row as L nor D.
- The row in which K sits has the maximum number of persons.
- None of the rows has the same number of persons.
- At least four persons sit in each row.

@QuizByMickey

- Two persons sit to the left of C, who sits adjacent to neither L nor G.
- The number of persons sitting between D and G is one more than the number of persons sitting between C and O who sits to the right of C.
- N sits at the right end of the row but is neither adjacent to A nor O.

- H sits second from one of the ends of the row and sits in a straight line with both K and J.

- The number of persons sitting to the right of H is one less than the number of persons sitting to the left of F.
- E sits in a row immediately in front of B, who doesn't sit adjacent to H.
- Neither M nor I sits in the same row as B whereas I doesn't sit in a straight line with E.

Hence, cases 1, 2 and 2a get eliminated.

Answer: B

7. Questions

@QuizByMickey

- D sits third to the left of G, who sits in a straight line with A.
- Only L sits adjacent to A whereas K sits second from the left end but neither in the same row as L nor D.
- The row in which K sits has the maximum number of persons.
- None of the rows has the same number of persons.
- At least four persons sit in each row.

- Two persons sit to the left of C, who sits adjacent to neither L nor G.
- The number of persons sitting between D and G is one more than the number of persons sitting between C and O who sits to the right of C.
- N sits at the right end of the row but is neither adjacent to A nor O.

- H sits second from one of the ends of the row and sits in a straight line with both K and J.

- The number of persons sitting to the right of H is one less than the number of persons sitting to the left of F.
- E sits in a row immediately in front of B, who doesn't sit adjacent to H.
- Neither M nor I sits in the same row as B whereas I doesn't sit in a straight line with E.

Hence, cases 1, 2 and 2a get eliminated.

Answer: A

8. Questions

@QuizByMickey

- D sits third to the left of G, who sits in a straight line with A.
- Only L sits adjacent to A whereas K sits second from the left end but neither in the same row as L nor D.
- The row in which K sits has the maximum number of persons.
- None of the rows has the same number of persons.
- At least four persons sit in each row.

- Two persons sit to the left of C, who sits adjacent to neither L nor G.
- The number of persons sitting between D and G is one more than the number of persons sitting between C and O who sits to the right of C.
- N sits at the right end of the row but is neither adjacent to A nor O.

- H sits second from one of the ends of the row and sits in a straight line with both K and J.

- The number of persons sitting to the right of H is one less than the number of persons sitting to the left of F.
- E sits in a row immediately in front of B, who doesn't sit adjacent to H.
- Neither M nor I sits in the same row as B whereas I doesn't sit in a straight line with E.

Hence, cases 1, 2 and 2a get eliminated.

Answer: E

9. Questions

@QuizByMickey

- D sits third to the left of G, who sits in a straight line with A.
- Only L sits adjacent to A whereas K sits second from the left end but neither in the same row as L nor D.
- The row in which K sits has the maximum number of persons.
- None of the rows has the same number of persons.
- At least four persons sit in each row.

- Two persons sit to the left of C, who sits adjacent to neither L nor G.
- The number of persons sitting between D and G is one more than the number of persons sitting between C and O who sits to the right of C.
- N sits at the right end of the row but is neither adjacent to A nor O.

- H sits second from one of the ends of the row and sits in a straight line with both K and J.

- The number of persons sitting to the right of H is one less than the number of persons sitting to the left of F.
- E sits in a row immediately in front of B, who doesn't sit adjacent to H.
- Neither M nor I sits in the same row as B whereas I doesn't sit in a straight line with E.

Hence, cases 1, 2 and 2a get eliminated.

Answer: D (Both the persons are in the adjacent rows, except option D)

10. Questions

@QuizByMickey

- D sits third to the left of G, who sits in a straight line with A.
- Only L sits adjacent to A whereas K sits second from the left end but neither in the same row as L nor D.
- The row in which K sits has the maximum number of persons.
- None of the rows has the same number of persons.
- At least four persons sit in each row.

- Two persons sit to the left of C, who sits adjacent to neither L nor G.
- The number of persons sitting between D and G is one more than the number of persons sitting between C and O who sits to the right of C.
- N sits at the right end of the row but is neither adjacent to A nor O.

- H sits second from one of the ends of the row and sits in a straight line with both K and J.

- The number of persons sitting to the right of H is one less than the number of persons sitting to the left of F.
- E sits in a row immediately in front of B, who doesn't sit adjacent to H.
- Neither M nor I sits in the same row as B whereas I doesn't sit in a straight line with E.

Hence, cases 1, 2 and 2a get eliminated.

Answer: A

11. Questions

We have:

Input:

DOWN RICH GARD MILD

Step I: In this step following logic is applied:

$$\begin{array}{c}
 \text{DOWN} \\
 \downarrow \\
 W (2+3) + D (4) = I (9) \quad O (1+5) + N (1+4) = K (11) \\
 \downarrow \\
 IK
 \end{array}$$

@QuizByMickey

Clearly, 1st letter in step I can be determined by the digital sum of the place value of the 1st and 3rd letters.

Similarly, 2nd letter in step I can be determined by the digital sum of the place value of the 2nd and 4th letter.

Step II: In this step following logic is applied:

Clearly, result in step II can be determined as follow:

- If the place value of the letter is even then, the resultant can be determined by:

Letter + 4 = Resultant

$$L (12) + 4 = P (16)$$

- If the place value of the letter is odd then, the resultant can be determined by:

Letter – 3 = Resultant

$$Q (17) - 3 = N (14)$$

The final resultant can be determined by interchanging letters in the resultant.

Thus, the Final result of “LQ” ->NP

Step III: In this step following logic is applied:

$$\begin{array}{l}
 \text{HF} \\
 \downarrow \\
 H (8) \times F (6) = 48 \\
 (4 + 8) = L (12) \\
 L
 \end{array}$$

Clearly, results in the step III can be determined as follow:

- Resultant can be determined by the product of the place value of the letters.

$$H (8) \times F (6) = 48$$

- The final resultant can be determined by the sum of the digits of the resultant.

$$\text{Result} = (4 + 8) = L (12)$$

Step IV: In this step following logic is applied:

Clearly, results in step IV can be determined as follow:

$$\begin{array}{c}
 L \quad \quad D \\
 \backslash \quad / \\
 \quad K
 \end{array}$$

$$L (12)^2 - D (4)^2 = 128$$

@QuizByMickey

- Resultant can be determined by the difference between the square of the place value of letters.

$$L (12)^2 - D (4)^2 = 128$$

- The final resultant can be determined by the sum of digits of the resultant.

$$(1 + 2 + 8) = K (11)$$

Step V: In this step following logic is applied:

- If the place value of the letter is odd then, the resultant can be determined by:

Letter – 4 = Resultant

$$K (11) - 4 = G (7)$$

- If place value of letter is even then, resultant can be determined by:

Letter + 6 = Resultant

$$L (12) + 6 = R (18)$$

The final resultant can be determined by interchanging letters of the obtained two letters string.

Thus, the Final result of the string “KL” ---> RG

Thus, from above given steps we final following result for the given input:

Input:

Answer: B

Clearly, “PG” is the final output.

Thus, the number of letters between G & P = 8.

Hence, option B is the correct choice.

12. Questions

We have:

Input:

DOWN RICH GARD MILD

Step I: In this step following logic is applied:

$$\begin{array}{c}
 \text{DOWN} \\
 \downarrow \\
 W (2+3) + D (4) = I (9) \quad O (1+5) + N (1+4) = K (11) \\
 \downarrow \\
 IK
 \end{array}$$

Clearly, 1st letter in step I can be determined by the digital sum of the place value of the 1st and 3rd letters.

Similarly, 2nd letter in step I can be determined by the digital sum of the place value of the 2nd and 4th letter.

Step II: In this step following logic is applied:

Clearly, result in step II can be determined as follow:

$$\begin{array}{cccc}
 IK & LQ & PE & GM \\
 \downarrow & \downarrow & \downarrow & \downarrow \\
 HF & NP & BT & JD
 \end{array}$$

- If the place value of the letter is even then, the resultant can be determined by:

Letter + 4 = Resultant

$$L (12) + 4 = P (16)$$

- If the place value of the letter is odd then, the resultant can be determined by:

Letter – 3 = Resultant

$$Q (17) - 3 = N (14)$$

@QuizByMickey

The final resultant can be determined by interchanging letters in the resultant.

Thus, the Final result of “LQ” ->NP

Step III: In this step following logic is applied:

$$\begin{array}{c}
 HF \\
 \downarrow \\
 H (8) \times F (6) = 48 \\
 (4 + 8) = L (12) \\
 \downarrow \\
 L
 \end{array}$$

Clearly, results in the step III can be determined as follow:

- Resultant can be determined by the product of the place value of the letters.

$$H (8) \times F (6) = 48$$

- The final resultant can be determined by the sum of the digits of the resultant.

$$\text{Result} = (4 + 8) = L (12)$$

Step IV: In this step following logic is applied:

Clearly, results in step IV can be determined as follow:

$$L (12)^2 - D (4)^2 = 128$$

- Resultant can be determined by the difference between the square of the place value of letters.

$$L (12)^2 - D (4)^2 = 128$$

- The final resultant can be determined by the sum of digits of the resultant.

$$(1 + 2 + 8) = K (11)$$

Step V: In this step following logic is applied:

- If the place value of the letter is odd then, the resultant can be determined by:

$$\text{Letter} - 4 = \text{Resultant}$$

$$K (11) - 4 = G (7)$$

- If place value of letter is even then, resultant can be determined by:

$$\text{Letter} + 6 = \text{Resultant}$$

$$L (12) + 6 = R (18)$$

The final resultant can be determined by interchanging letters of the obtained two letters string.

Thus, the Final result of the string "KL" ---> RG

Thus, from above given steps we final following result for the given input:

@QuizByMickey

Input:

Answer: E

After rearranging letters in reverse alphabetical order from left to right we have à ZTRLHHDB

Clearly, the third letter from the right end = H

Hence, option E is the correct choice.

13. Questions

We have:

Input:

DOWN RICH GARD MILD

Step I: In this step following logic is applied:

@QuizByMickey

$$\begin{array}{c}
 \text{DOWN} \\
 \downarrow \\
 W (2+3) + D (4) = I (9) \quad O (1+5) + N (1+4) = K (11) \\
 \downarrow \\
 IK
 \end{array}$$

Clearly, 1st letter in step I can be determined by the digital sum of the place value of the 1st and 3rd letters.

Similarly, 2nd letter in step I can be determined by the digital sum of the place value of the 2nd and 4th letter.

Step II: In this step following logic is applied:

Clearly, result in step II can be determined as follow:

- If the place value of the letter is even then, the resultant can be determined by:

Letter + 4 = Resultant

$$L (12) + 4 = P (16)$$

- If the place value of the letter is odd then, the resultant can be determined by:

Letter - 3 = Resultant

$$Q (17) - 3 = N (14)$$

The final resultant can be determined by interchanging letters in the resultant.

Thus, the Final result of "LQ" ->NP

Step III: In this step following logic is applied:

$$\begin{array}{l}
 \text{HF} \\
 \downarrow \\
 H (8) \times F (6) = 48 \\
 (4 + 8) = L (12) \\
 L
 \end{array}$$

Clearly, results in the step III can be determined as follow:

- Resultant can be determined by the product of the place value of the letters.

$$H (8) \times F (6) = 48$$

- The final resultant can be determined by the sum of the digits of the resultant.

$$\text{Result} = (4 + 8) = L (12)$$

Step IV: In this step following logic is applied:

Clearly, results in step IV can be determined as follow:

$$\begin{array}{c}
 L \quad \quad D \\
 \backslash \quad / \\
 \quad K
 \end{array}$$

$$L (12)^2 - D (4)^2 = 128$$

@QuizByMickey

- Resultant can be determined by the difference between the square of the place value of letters.

$$L (12)^2 - D (4)^2 = 128$$

- The final resultant can be determined by the sum of digits of the resultant.

$$(1 + 2 + 8) = K (11)$$

Step V: In this step following logic is applied:

- If the place value of the letter is odd then, the resultant can be determined by:

Letter – 4 = Resultant

$$K (11) - 4 = G (7)$$

- If place value of letter is even then, resultant can be determined by:

Letter + 6 = Resultant

$$L (12) + 6 = R (18)$$

The final resultant can be determined by interchanging letters of the obtained two letters string.

Thus, the Final result of the string “KL” ---> RG

Thus, from above given steps we final following result for the given input:

Input:

Answer: D

After rearranging letters in alphabetical series we have à CEGHKKNP

Thus, the number of letters between 'G' & 'N' in the English alphabetical series = six.

Hence, option D is the correct choice.

14. Questions

We have:

Input:

DOWN RICH GARD MILD

Step I: In this step following logic is applied:

$$\begin{array}{c}
 \text{DOWN} \\
 \downarrow \\
 W (2+3) + D (4) = I (9) \quad O (1+5) + N (1+4) = K (11) \\
 \downarrow \\
 IK
 \end{array}$$

Clearly, 1st letter in step I can be determined by the digital sum of the place value of the 1st and 3rd letters.

Similarly, 2nd letter in step I can be determined by the digital sum of the place value of the 2nd and 4th letter.

Step II: In this step following logic is applied:

Clearly, result in step II can be determined as follow:

$$\begin{array}{cccc}
 IK & LQ & PE & GM \\
 \downarrow & \downarrow & \downarrow & \downarrow \\
 HF & NP & BT & JD
 \end{array}$$

- If the place value of the letter is even then, the resultant can be determined by:

Letter + 4 = Resultant

$$L (12) + 4 = P (16)$$

- If the place value of the letter is odd then, the resultant can be determined by:

Letter – 3 = Resultant

$$Q (17) - 3 = N (14)$$

The final resultant can be determined by interchanging letters in the resultant.

Thus, the Final result of "LQ" ->NP

Step III: In this step following logic is applied:

$$\begin{array}{c}
 HF \\
 \downarrow \\
 H (8) \times F (6) = 48 \\
 (4 + 8) = L (12) \\
 \downarrow \\
 L
 \end{array}$$

@QuizByMickey

Clearly, results in the step III can be determined as follow:

- Resultant can be determined by the product of the place value of the letters.

$$H (8) \times F (6) = 48$$

- The final resultant can be determined by the sum of the digits of the resultant.

$$\text{Result} = (4 + 8) = L (12)$$

Step IV: In this step following logic is applied:

Clearly, results in step IV can be determined as follow:

$$L (12)^2 - D (4)^2 = 128$$

- Resultant can be determined by the difference between the square of the place value of letters.

$$L (12)^2 - D (4)^2 = 128$$

- The final resultant can be determined by the sum of digits of the resultant.

$$(1 + 2 + 8) = K (11)$$

Step V: In this step following logic is applied:

- If the place value of the letter is odd then, the resultant can be determined by:

$$\text{Letter} - 4 = \text{Resultant}$$

$$K (11) - 4 = G (7)$$

- If place value of letter is even then, resultant can be determined by:

$$\text{Letter} + 6 = \text{Resultant}$$

$$L (12) + 6 = R (18)$$

The final resultant can be determined by interchanging letters of the obtained two letters string.

Thus, the Final result of the string "KL" ---> RG

Thus, from above given steps we final following result for the given input:

@QuizByMickey

Input:

Answer: C

Clearly, CF doesn't belong to step I.

Hence, option C is the correct choice.

15. Questions

We have:

Input:

DOWN RICH GARD MILD

Step I: In this step following logic is applied:

$$\begin{array}{c}
 \text{DOWN} \\
 \downarrow \\
 W (2+3) + D (4) = I (9) \quad \text{O (1+5) + N (1+4) = K (11)} \\
 \downarrow \\
 \text{IK}
 \end{array}$$

Clearly, 1st letter in step I can be determined by the digital sum of the place value of the 1st and 3rd letters.

Similarly, 2nd letter in step I can be determined by the digital sum of the place value of the 2nd and 4th letter.

Step II: In this step following logic is applied:

Clearly, result in step II can be determined as follow:

- If the place value of the letter is even then, the resultant can be determined by:

Letter + 4 = Resultant

$$L (12) + 4 = P (16)$$

- If the place value of the letter is odd then, the resultant can be determined by:

Letter - 3 = Resultant

$$Q (17) - 3 = N (14)$$

The final resultant can be determined by interchanging letters in the resultant.

Thus, the Final result of "LQ" ->NP

Step III: In this step following logic is applied:

$$\begin{array}{l} \text{HF} \\ \downarrow \\ \text{H (8)} \times \text{F (6)} = 48 \\ (4 + 8) = \text{L (12)} \\ \text{L} \end{array}$$

Clearly, results in the step III can be determined as follow:

- Resultant can be determined by the product of the place value of the letters.

$$\text{H (8)} \times \text{F (6)} = 48$$

- The final resultant can be determined by the sum of the digits of the resultant.

$$\text{Result} = (4 + 8) = \text{L (12)}$$

Step IV: In this step following logic is applied:

Clearly, results in step IV can be determined as follow:

$$\begin{array}{c} \text{L} \quad \quad \text{D} \\ \quad \backslash \quad / \\ \quad \text{K} \end{array}$$

$$\text{L (12)}^2 - \text{D (4)}^2 = 128$$

@QuizByMickey

- Resultant can be determined by the difference between the square of the place value of letters.

$$\text{L (12)}^2 - \text{D (4)}^2 = 128$$

- The final resultant can be determined by the sum of digits of the resultant.

$$(1 + 2 + 8) = K (11)$$

Step V: In this step following logic is applied:

- If the place value of the letter is odd then, the resultant can be determined by:

Letter – 4 = Resultant

$$K (11) - 4 = G (7)$$

- If place value of letter is even then, resultant can be determined by:

Letter + 6 = Resultant

$$L (12) + 6 = R (18)$$

The final resultant can be determined by interchanging letters of the obtained two letters string.

Thus, the Final result of the string “KL” ---> RG

Thus, from above given steps we final following result for the given input:

Input:

Answer: E

Clearly, the second from the left end in Step-III and the first letter from the right end in Step-IV are ‘F’ and

'J'. Thus, the number of letters between F & J = 3.

Hence, option E is the correct choice.
