

1. Questions

Read the following information carefully and answer the questions given below.

A group of persons - A, B, C, D, E, F, G, H, I and J is seated around a square table. The table has one seat at each of the four corners and two seats on each of the four sides. All of them are facing outside the table. There is a total of 12 seats, but only 10 persons are sitting while the remaining 2 seats are vacant.

J, who sits in the middle side, sits second to the left of G. Three persons sit between G and C, when counted in the anti-clockwise direction from C. B sits opposite to E, who sits to the immediate left of C. Neither B nor E sits at the corner of the table. I sits adjacent to the vacant seat and sits to the immediate left of E. The number of persons sitting between G and A is equal when counted from both sides. Two persons sit between J and A. H sits to the immediate left of the one who sits opposite to D. A is not an immediate neighbor of D. Neither G nor J is an immediate neighbor of F.

Which of the following pairs of persons sit second to the right of both the vacant seats respectively?

- a. A and H
- b. A and D
- c. H and F
- d. B and E
- e. C and I

2. Questions

Which of the following statement(s) is/are FALSE with respect to the final arrangement?

- a. E doesn't sit adjacent to any vacant seat
- b. H sits in the middle side of the table
- c. A sits adjacent to B
- d. C sits third to the right of the vacant seat
- e. D sits between G and I, when counted from the right of G

3. Questions

Who among the following persons sits to the immediate left of G?

- a. The one who sits to the immediate right of J
- b. F
- c. The one who sits second to the right of F
- d. A
- e. The one who sits second to the left of C

4. Questions

Four of the following five are alike in a certain way based on the given arrangement and thus form a group. Which one of the following does not belong to the group?

- The one who sits to the immediate left of F
- J
- The one who sits second to the right of B
- C
- The one who sits to the immediate left of E

5. Questions

If K replaces the vacant seat as an immediate neighbor of I, then what will be the position of K with respect to H?

- Immediate left
- Fifth to the left
- Immediate right
- Second to the left
- Third to the right

6. Questions

Study the following information carefully and answer the given questions.

Column I	Column II
a). $A > B \geq C < D \leq E > F$	p). $E > X \geq Y < Z$
b). $C < G \leq D > A \geq F$	q). $Z \leq Y < H < E$
c). $E \geq H > G < B \leq C$	r). $X < M \leq H \geq Z$

Which of the following combination(s) shows both $E \geq M$ and $Z < E$ are true?

- a-p
- b-q
- c-q
- c-r
- None of these

7. Questions

Column I	Column II
a). $L > M \geq N < P \leq Q$	p). $N > D < R < L$
b). $P > N < R \leq M$	q). $M \geq D < Q$
c). $Q \geq R > M \geq L$	r). $P \geq D < M < Q$

Which of the following combination(s) shows both $P > D$ and $N < L$ are true?

- a. a-q
- b. b-p
- c. b-r
- d. c-p
- e. c-q

8. Questions

Column I	Column II
a). $S \geq T < U \leq V < W$	p). $U > D \geq R$
b). $V > U \geq R < T$	q). $T > D < W$
c). $S > R < V \geq T$	r). $V \geq D < S$

Which of the following combination(s) shows both $W > R$ and $D < V$ are true?

- a. a-p
- b. b-q
- c. b-r
- d. c-p
- e. c-q

@QuizByMickey

9. Questions

Column I	Column II
a). $E \leq F = G < D$	p). $F > D < C$
b). $F \geq H > D < I$	q). $E = D < I$
c). $G = I \geq F > E$	r). $J < H \leq G$

Which of the following combination(s) shows both $D > J$ and $F \geq H$ are true?

- a. a-p
- b. b-q
- c. b-r
- d. a-r
- e. c-q

10. Questions

Column I	Column II
a). $A < F \leq C = D \geq E$	p). $C \geq D > H$
b). $C \leq F \leq B < E$	q). $B \geq D = A$
c). $D \geq G < C = A$	r). $G < D \leq C$

Which of the following combination(s) shows both $B \geq D$ and $G < F$ are true?

- a. a-p
- b. b-q
- c. b-r
- d. c-p
- e. c-q

@QuizByMickey

11. Questions

Read the following information carefully and answer the questions given below.

Eight persons - A, B, C, D, P, Q, R and S are seated around a circular table facing the centre. Each person has a different number of chocolates, viz., 2, 3, 4, 5, 6, 7, 9, 11. No two adjacent persons' chocolate counts are in common multiple or common factors.

A sits second to the left of the one who has chocolates as a perfect square of an even number. Two persons sit between Q and the one who has 7 chocolates. Q sits second to the right of D, who has 4 chocolates. P is

an immediate neighbor of A but does not have 7 chocolates. S faces B, who has the maximum number of chocolates. The one who has 8 chocolates less than B sits to the immediate right of R, who has chocolates more than only three persons. Neither D nor the one who has the minimum number of chocolates is an immediate neighbor of R. The one who has the second-highest number of chocolates sits third to the left of the one who has chocolates in multiple of 2. A has a minimum number of chocolates.

Who among the following person sits third to the left of D as per the final arrangement?

- a. The one who sits second to the right of C
- b. The one who has 7 chocolates
- c. The one who sits third to the left of R
- d. The one who has 3 pens
- e. The one who sits to the immediate left of Q

12. Questions

Who among the following persons has 3 chocolates with respect to the final arrangement?

- a. The one who sits second to the right of A
- b. R
- c. The one who sits second to the left of P
- d. Q
- e. The one who sits to the immediate right of R

13. Questions

Which of the following pairs, the product of the number of chocolates with them is highest?

- a. P & Q
- b. R & S
- c. A & B
- d. D & P
- e. C & D

@QuizByMickey

14. Questions

Which of the following order shows the arrangement of persons based on the increasing order of their chocolate count?

- a. A, P, D, R, Q, S, C, B
- b. A, P, D, R, S, Q, C, B
- c. A, C, D, R, S, Q, P, B

d. A, C, D, R, Q, S, P, B

e. A, D, C, R, Q, S, P, B

15. Questions

Who among the following person sits opposite to C based on the final arrangement?

a. G

b. H

c. D

d. F

e. P

16. Questions

Study the following information carefully and answer the given questions.

Eight persons - M, N, O, P, Q, R, S and T live on eight different floors of a building. The lowermost floor is numbered as 1 and the topmost floor is numbered as 8. Each person has a different number of pens from the set 11, 14, 17, 18, 23, 25, 31, 36.

Note: The number of pens with the persons living on adjacent floors is neither a common multiple nor a common factor.

P lives on the fifth floor and has a prime-number of pens. The one who has 11 pens lives two floors below P. Only three persons live between the one who has 11 pens and the one who has pens in a perfect square number. N has 25 pens but does not live above the sixth floor. Neither N nor the one who has 18 pens lives on an odd-numbered floor. R, who does not live on the bottommost floor, lives immediately below the one who has 18 pens. As many persons live below the one who has 17 pens as above S. S has the number of pens, which is a multiple of 2. The one who has 17 pens lives immediately above M. The one who has 31 pens and the one who has 23 pens lives on the adjacent floors. Q lives above T but below O. Q does not have 23 pens.

Which of the following combination(s) is/are TRUE with respect to the final arrangement?

a. R — 18

b. S — 23

c. Q — 31

d. T — 17

e. O — 36

@QuizByMickey

17. Questions

How many persons live between the person who has 14 pens and the person who has 31 pens?

a. Same as between O and the one who has 11 pens

- b. Three
- c. Same as between S and T
- d. Five
- e. Same as between Q and R

18. Questions

Who among the following person lives immediately above the one who has 36 pens?

- a. The one who has 31 pens
- b. The one who lives two floors above Q
- c. P
- d. The one who has 25 pens
- e. R

19. Questions

Who among the following person lives on the third floor based on the final arrangement?

- a. O
- b. The one who lives two floors above the one who has 25 pens
- c. N
- d. The one who lives immediately below T
- e. Q

20. Questions

Which of the following statement(s) is/are TRUE with respect to the final arrangement?

- a. The person who has 25 pens lives below the person who has 18 pens
- b. The person who has 17 pens lives on the topmost floor
- c. The person who has 17 pens lives immediately above the person who has 36 pens
- d. The person who has 23 pens lives on the 5th floor
- e. All the given statements are correct

Explanations:

1. Questions

Final Arrangement:

We have,

- J, who sits in the middle side, sits second to the left of G.

From the above condition, there are two possibilities.

Again, we have,

- Three persons sit between G and C, when counted in the anti-clockwise direction from C.
- B sits opposite to E, who sits to the immediate left of C.
- Neither B nor E sits at the corner of the table.
- I sits adjacent to the vacant seat and sits to the immediate left of E.
- The number of persons sitting between G and A is equal when counted from both sides.
- Two persons sit between J and A.
- H sits to the immediate left of the one who sits opposite to D.
- A is not an immediate neighbor of D.

Again, we have,

- Neither G nor J is an immediate neighbor of F.

From the above condition, case-2 gets eliminated because neither G nor J is an immediate neighbor of F,

which is not satisfied.

Hence, case-1 shows the final arrangement.

Answer: D

2. Questions

Final Arrangement:

We have,

- J, who sits in the middle side, sits second to the left of G.

From the above condition, there are two possibilities.

Again, we have,

- Three persons sit between G and C, when counted in the anti-clockwise direction from C.
- B sits opposite to E, who sits to the immediate left of C.
- Neither B nor E sits at the corner of the table.
- I sits adjacent to the vacant seat and sits to the immediate left of E.

- The number of persons sitting between G and A is equal when counted from both sides.
- Two persons sit between J and A.
- H sits to the immediate left of the one who sits opposite to D.
- A is not an immediate neighbor of D.

Again, we have,

- Neither G nor J is an immediate neighbor of F.

From the above condition, case-2 gets eliminated because neither G nor J is an immediate neighbor of F, which is not satisfied.

Hence, case-1 shows the final arrangement.

Answer: C

3. Questions

Final Arrangement:

@QuizByMickey

We have,

- J, who sits in the middle side, sits second to the left of G.

From the above condition, there are two possibilities.

Again, we have,

- Three persons sit between G and C, when counted in the anti-clockwise direction from C.
- B sits opposite to E, who sits to the immediate left of C.
- Neither B nor E sits at the corner of the table.
- I sits adjacent to the vacant seat and sits to the immediate left of E.
- The number of persons sitting between G and A is equal when counted from both sides.
- Two persons sit between J and A.
- H sits to the immediate left of the one who sits opposite to D.
- A is not an immediate neighbor of D.

Again, we have,

- Neither G nor J is an immediate neighbor of F.

From the above condition, case-2 gets eliminated because neither G nor J is an immediate neighbor of F, which is not satisfied.

Hence, case-1 shows the final arrangement.

@QuizByMickey

Answer: A

4. Questions

Final Arrangement:

We have,

- J, who sits in the middle side, sits second to the left of G.

From the above condition, there are two possibilities.

Again, we have,

- Three persons sit between G and C, when counted in the anti-clockwise direction from C.
- B sits opposite to E, who sits to the immediate left of C.
- Neither B nor E sits at the corner of the table.
- I sits adjacent to the vacant seat and sits to the immediate left of E.
- The number of persons sitting between G and A is equal when counted from both sides.
- Two persons sit between J and A.
- H sits to the immediate left of the one who sits opposite to D.
- A is not an immediate neighbor of D.

Again, we have,

- Neither G nor J is an immediate neighbor of F.

From the above condition, case-2 gets eliminated because neither G nor J is an immediate neighbor of F, which is not satisfied.

Hence, case-1 shows the final arrangement.

Answer: E (All other persons are sitting on the middle side, except option e)

5. Questions

Final Arrangement:

@QuizByMickey

We have,

- J, who sits in the middle side, sits second to the left of G.

From the above condition, there are two possibilities.

Again, we have,

- Three persons sit between G and C, when counted in the anti-clockwise direction from C.
- B sits opposite to E, who sits to the immediate left of C.
- Neither B nor E sits at the corner of the table.
- I sits adjacent to the vacant seat and sits to the immediate left of E.
- The number of persons sitting between G and A is equal when counted from both sides.
- Two persons sit between J and A.
- H sits to the immediate left of the one who sits opposite to D.
- A is not an immediate neighbor of D.

Again, we have,

- Neither G nor J is an immediate neighbor of F.

From the above condition, case-2 gets eliminated because neither G nor J is an immediate neighbor of F, which is not satisfied.

Hence, case-1 shows the final arrangement.

@QuizByMickey

Answer: B

6. Questions

Answer: E

$E \geq M$ ($E \geq H \geq M$) and $Z < E$ ($Z \leq Y < H < E$)

$E \geq H > G < B \leq C$; $X < M \leq H \geq Z$

$E \geq H > G < B \leq C$; $Z \leq Y < H < E$

Hence, both conclusions don't follow in one pair.

7. Questions

Answer: B

$P > D$ ($P > N > D$) and $N < L$ ($N < R < L$)

$N > D < R < L$; $P > N < R \leq M$

8. Questions

Answer: A

$W > R$ ($W > V \geq U > D \geq R$) and $D < V$ ($V \geq U > D$)

$S \geq T < U \leq V < W$; $U > D \geq R$

9. Questions

Answer: D

$D > J$ ($D > G \geq H > J$) and $F \geq H$ ($F = G \geq H$)

$E \leq F = G < D$; $J < H \leq G$

10. Questions

Answer: C

$B \geq D$ ($B \geq F \geq C \geq D$) and $G < F$ ($D \leq C \leq F$)

$C \leq F \leq B < E$; $G < D \leq C$

11. Questions

Final Arrangement:

@QuizByMickey

We have,

- A sits second to the left of the one who has chocolates as a perfect square of an even number.
- Two persons sit between Q and the one who has 7 chocolates.
- Q sits second to the right of D, who has 4 chocolates.

From the above conditions, there are two possibilities.

Again, we have,

- P is an immediate neighbor of A but does not have 7 chocolates.
- S faces B, who has the maximum number of chocolates.
- The one who has 8 chocolates less than B sits to the immediate right of R, who has chocolates more than only three persons.
- Neither D nor the one who has the minimum number of chocolates is an immediate neighbor of R

@QuizByMickey

Again, we have,

- The one who has the second-highest number of chocolates sits third to the left of the one who

has chocolates as multiples of 2.

- A has a minimum number of chocolates.

From the above conditions, case-1 gets eliminated because the one who has the second highest number of chocolates sits third to the left of the one who has chocolates as multiples of 2, which is not satisfied.

Hence, case-2 shows the final arrangement

Answer: B

12. Questions

Final Arrangement:

We have,

- A sits second to the left of the one who has chocolates as a perfect square of an even number.
- Two persons sit between Q and the one who has 7 chocolates.
- Q sits second to the right of D, who has 4 chocolates.

@QuizByMickey

From the above conditions, there are two possibilities.

Again, we have,

- P is an immediate neighbor of A but does not have 7 chocolates.
- S faces B, who has the maximum number of chocolates.
- The one who has 8 chocolates less than B sits to the immediate right of R, who has chocolates more than only three persons.
- Neither D nor the one who has the minimum number of chocolates is an immediate neighbor of R

Again, we have,

- The one who has the second-highest number of chocolates sits third to the left of the one who has chocolates as multiples of 2.
- A has a minimum number of chocolates.

From the above conditions, case-1 gets eliminated because the one who has the second highest number of chocolates sits third to the left of the one who has chocolates as multiples of 2, which is not satisfied.

Hence, case-2 shows the final arrangement

@QuizByMickey

Answer: E

13. Questions

Final Arrangement:

We have,

- A sits second to the left of the one who has chocolates as a perfect square of an even number.
- Two persons sit between Q and the one who has 7 chocolates.
- Q sits second to the right of D, who has 4 chocolates.

From the above conditions, there are two possibilities.

Again, we have,

- P is an immediate neighbor of A but does not have 7 chocolates.
- S faces B, who has the maximum number of chocolates.
- The one who has 8 chocolates less than B sits to the immediate right of R, who has chocolates more than only three persons.
- Neither D nor the one who has the minimum number of chocolates is an immediate neighbor of R

@QuizByMickey

Again, we have,

- The one who has the second-highest number of chocolates sits third to the left of the one who

has chocolates as multiples of 2.

- A has a minimum number of chocolates.

From the above conditions, case-1 gets eliminated because the one who has the second highest number of chocolates sits third to the left of the one who has chocolates as multiples of 2, which is not satisfied.

Hence, case-2 shows the final arrangement

Answer: A

14. Questions

Final Arrangement:

We have,

- A sits second to the left of the one who has chocolates as a perfect square of an even number.
- Two persons sit between Q and the one who has 7 chocolates.
- Q sits second to the right of D, who has 4 chocolates.

@QuizByMickey

From the above conditions, there are two possibilities.

Again, we have,

- P is an immediate neighbor of A but does not have 7 chocolates.
- S faces B, who has the maximum number of chocolates.
- The one who has 8 chocolates less than B sits to the immediate right of R, who has chocolates more than only three persons.
- Neither D nor the one who has the minimum number of chocolates is an immediate neighbor of R

Again, we have,

- The one who has the second-highest number of chocolates sits third to the left of the one who has chocolates as multiples of 2.
- A has a minimum number of chocolates.

From the above conditions, case-1 gets eliminated because the one who has the second highest number of chocolates sits third to the left of the one who has chocolates as multiples of 2, which is not satisfied.

Hence, case-2 shows the final arrangement

@QuizByMickey

Answer: D

15. Questions

Final Arrangement:

We have,

- A sits second to the left of the one who has chocolates as a perfect square of an even number.
- Two persons sit between Q and the one who has 7 chocolates.
- Q sits second to the right of D, who has 4 chocolates.

From the above conditions, there are two possibilities.

Again, we have,

- P is an immediate neighbor of A but does not have 7 chocolates.
- S faces B, who has the maximum number of chocolates.
- The one who has 8 chocolates less than B sits to the immediate right of R, who has chocolates more than only three persons.
- Neither D nor the one who has the minimum number of chocolates is an immediate neighbor of R

@QuizByMickey

Again, we have,

- The one who has the second-highest number of chocolates sits third to the left of the one who

has chocolates as multiples of 2.

- A has a minimum number of chocolates.

From the above conditions, case-1 gets eliminated because the one who has the second highest number of chocolates sits third to the left of the one who has chocolates as multiples of 2, which is not satisfied.

Hence, case-2 shows the final arrangement

Answer: C

16. Questions

Final arrangement:

Floors	Persons	Pens
8	O	17
7	M	36
6	Q	31
5	P	23
4	T	18
3	R	11
2	N	25
1	S	14

@QuizByMickey

We have,

- P lives on the fifth floor and has prime-number of pens.
- The one who has 11 pens lives two floors below P.

From the above conditions, there are three possibilities.

	Case-1		Case-2		Case-3	
Floors	Persons	Pens	Persons	Pens	Persons	Pens
8						
7						
6						
5	P	17	P	23	P	31
4						
3		11		11		11
2						
1						

Again, we have,

- Only three persons live between the one who has 11 pens and the one who has pens in a perfect square number.
- N has 25 pens but does not live above the sixth floor.
- Neither N nor the one who has 18 pens lives on an odd-numbered floor.
- R, who does not live on the bottommost floor, lives immediately below the one who has 18 pens.
- As many persons live below the one who has 17 pens as above S.
- S has the number of pens, which is a multiple of 2
- The one who has 17 pens lives immediately above M.
- The one who has 31 pens and the one who has 23 pens live on the adjacent floors.

From the above conditions, case-1 gets eliminated because S does not have the number of pens as multiples of 2, which is not satisfied.

@QuizByMickey

	Case-1		Case-2		Case-3	
Floors	Persons	Pens	Persons	Pens	Persons	Pens
8				17		17
7		36	M	36	M	36
6				31		23
5	P	17	P	23	P	31

1						

Again, we have,

- Only three persons live between the one who has 11 pens and the one who has pens in a perfect square number.
- N has 25 pens but does not live above the sixth floor.
- Neither N nor the one who has 18 pens lives on an odd-numbered floor.
- R, who does not live on the bottommost floor, lives immediately below the one who has 18 pens.
- As many persons live below the one who has 17 pens as above S.
- S has the number of pens, which is a multiple of 2
- The one who has 17 pens lives immediately above M.
- The one who has 31 pens and the one who has 23 pens live on the adjacent floors.

From the above conditions, case-1 gets eliminated because S does not have the number of pens as multiples of 2, which is not satisfied.

@QuizByMickey

	Case-1		Case-2		Case-3	
Floors	Persons	Pens	Persons	Pens	Persons	Pens
8				17		17
7		36	M	36	M	36
6				31		23
5	P	17	P	23	P	31
4	S	18		18		18
3	R	11	R	11	R	11
2			N	25	N	25
1			S		S	

Again, we have,

- Q lives above T but below O.
- Q does not have 23 pens.

From the above conditions, case 3 gets eliminated because Q does not have 23 pens, which is not satisfied.

Hence, case-2 shows the final arrangement.

@QuizByMickey

	Case-2		Case-3	
Floors	Persons	Pens	Persons	Pens
8	O	17	O	17
7	M	36	M	36
6	Q	31	Q	23
5	P	23	P	31
4	T	18	T	18
3	R	11	R	11
2	N	25	N	25
1	S	14	S	14

Answer: B

19. Questions

Final arrangement:

Floors	Persons	Pens
8	O	17
7	M	36
6	Q	31
5	P	23
4	T	18
3	R	11
2	N	25
1	S	14

@QuizByMickey

We have,

- P lives on the fifth floor and has prime-number of pens.

- The one who has 11 pens lives two floors below P.

From the above conditions, there are three possibilities.

	Case-1		Case-2		Case-3	
Floors	Persons	Pens	Persons	Pens	Persons	Pens
8						
7						
6						
5	P	17	P	23	P	31
4						
3		11		11		11
2						
1						

Again, we have,

- Only three persons live between the one who has 11 pens and the one who has pens in a perfect square number.
- N has 25 pens but does not live above the sixth floor.
- Neither N nor the one who has 18 pens lives on an odd-numbered floor.
- R, who does not live on the bottommost floor, lives immediately below the one who has 18 pens.
- As many persons live below the one who has 17 pens as above S.
- S has the number of pens, which is a multiple of 2
- The one who has 17 pens lives immediately above M.
- The one who has 31 pens and the one who has 23 pens live on the adjacent floors.

From the above conditions, case-1 gets eliminated because S does not have the number of pens as multiples of 2, which is not satisfied.

@QuizByMickey

	Case-1		Case-2		Case-3	
Floors	Persons	Pens	Persons	Pens	Persons	Pens
8				17		17
7		36	M	36	M	36
