

1. Questions

Study the following information carefully and answer the questions given below.

Sixteen persons-A, B, C, D, E, F, G, R, I, J, K, L, M, N, O, and P are sitting around two concentric circular tables, with one inscribed in the other. Eight persons are sitting at the inner table facing away from the centre. Eight persons are sitting at the outer table facing towards the centre. Each person sitting at the outer table faces the person sitting at the inner table and vice versa.

Note: Only the persons sitting on different tables are facing each other and the persons sitting on the same table are sitting opposite to each other. For example,

‘X faces Y’ means X and Y sit at different tables and facing each other.

‘X sits opposite to Y’ means X and Y sit exactly opposite to each other at the same table.

A sits second to the left of C, who is facing the centre of the table. Two persons sit between C and F. J sits third to the right of the one who faces F. One person sits between O and the one who faces R. R sits neither at the outer table nor adjacent to J. O sits opposite to K. L sits third to the left of the one who faces K. The number of persons sitting between L and R is **two less than** the number of persons sitting between B and the one who faces I (when counted from the left of both B and R). B doesn’t sit at the inner table. D sits immediate right of the one who faces N, who sits adjacent to K. As many persons sit between N and M (when counted from the left of M) as between D and E (when counted from the right of E). E sits immediate right of P.

How many persons sit between P and the one who faces K,when counted from the right of P?

- a. Five
- b. Two
- c. One
- d. Four
- e. None

2. Questions

Which of the following pairs of persons sit opposite to each other?

- a. C, F
- b. N, C
- c. A, B
- d. B, M
- e. Both b and c

@QuizByMickey

3. Questions

Four of the following five are alike in a certain way based on their positions in the above arrangement and thus form a group. Which one of the following does not belong to the group?

- a. A
- b. R
- c. K
- d. N
- e. B

4. Questions

Who among the following sits third to the right of G in the final arrangement?

- a. I
- b. The one who faces F
- c. The one who sits immediate right of D
- d. P
- e. Both b and c

5. Questions

Which of the following statements is/are TRUE according to the final arrangement?

- a. R is facing the centre
- b. N sits at the inner table
- c. A sits immediate left of O
- d. F faces an immediate neighbor of D
- e. Both b) and c)

6. Questions

Each of the questions below consists of two columns and three pairs of conclusions in each column. You have to decide which of the following combinations are true with respect to the given statements. The conclusions given below in column 1 can be used along with the conclusions given below in column 2. No conclusion in the same column is combined together.

Which of the following conclusions is true for the given statement?

Statements: $V > T < R = Y$, $G = F \geq U < I$, $B = R > G \leq O$, $C \geq J > O < X$

Column 1	Column 2
I). $V > I, F \geq C$	IV). $X < I, T < O$
II). $R < U, J < T$	V). $U \leq C, J > I$
III). $G < C, Y > U$	VI). $F < B, U < Y$

- Only II and IV are true
- All I, II, III, IV, V, and VI are true
- Only III is true
- Only III and VI are true
- Only I and V are true

7. Questions

Which of the following conclusions is true for the given statement?

Statements: $A \leq G > X < R, H \geq E < B = Y, Y > R = C \leq P, U = X \leq K > D$

Column 1	Column 2
I). $A < U, H \geq C$	IV). $C \geq U, K \geq B$
II). $D < Y, G < P$	V). $B > C, P > X$
III). $R \leq H, C < A$	VI). $E \leq P, X > H$

- Only V is true
- Only I, II, and III are true
- Only III and V are true
- Only IV, VI, and II are true
- Only I and IV are true

@QuizByMickey

8. Questions

Which of the following conclusions is true for the given statement?

Statements: $N > O \geq F > J, E < L \leq G > S, V < E = C = W, L \geq F = H \geq B$

Column 1	Column 2
I). $G > W, N > B$	IV). $C \geq H, E < O$
II). $E \leq O, S > B$	V). $B \leq G, J < L$
III). $V \leq O, N \geq W$	VI). $V < S, J \leq C$

- Only I and III are true
- Only I, II, and IV are true
- Only I and V are true
- Only II and II are true
- Only I, III and V are true

9. Questions

Which of the following conclusions is true for the given statement?

Statements: $A = B \geq P < T, Q > E = D < V, E \leq F < U = W, S > B \geq D \geq R$

Column 1	Column 2
I). $A < W, Q > S$	IV). $U > R, D < W$
II). $W \geq R, P \leq F$	V). $W = B, R > F$
III). $Q > A, T \leq S$	VI). $Q < S, P \leq W$

- Only I and IV are true
- Only IV is true
- Only III, IV, and V are true
- None is true
- Only II and III are true

@QuizByMickey

10. Questions

Which of the following conclusions is true for the given statement?

Statements: $P < Q \geq S \geq R, F > U \leq T < M, B > M \leq D = P, G \leq V = T > H$

Column 1	Column 2
I). $Q > U, P > T$	IV). $H < B, M < Q$
II). $G \leq S, R \leq B$	V). $M \leq R, H \geq P$
III). $M > R, G \geq D$	VI). $Q > F, G \leq B$

- a. Only II and III are true
- b. Only IV, V, and VI are true
- c. Only I and V are true
- d. Only III is true
- e. Only I and IV are true

11. Questions

Study the following information carefully and answer the questions given below.

Four trains – I, J, K, and L – travel from one point to another point. The points are U, V, W, and X. These four points are connected to a common junction and are equidistant from the junction.

The directions of these points with respect to the junction are as follows:

Point U is to the south of the junction

Point V is to the west of the junction

Point W is to the east of the junction

Point X is to the north of the junction

Note: While traveling from one point to another all the trains must pass through the junction.

The following codes denote the direction of movement of the trains from one point to another.

“B% C” means Train C starts from a certain point and moves straight through the junction to reach Point B

“B& C” means Train C starts from a certain point and moves right from the junction to reach Point B

“B# C” means Train C starts from a certain point and moves left from the junction to reach Point B

“B@ C” means Train B starts from a certain point and moves straight through the junction to reach Point C

“B* C” means Train B starts from a certain point and moves to the right from the junction to reach Point C

“B□ C” means Train B starts from Point C and moves left from the junction to reach a certain point

“B□ C” means Train B starts from Point C and moves right from the junction to reach a certain point

“B\$ C” means Train B starts from Point C and moves straight through the junction to reach a certain point

If “V% I□ W& K”, then trains I and K can reach which among the following points respectively?

- a. Point W , Point V, and Point X
- b. Point X
- c. Point U
- d. Point V and Point X
- e. Point U and Point V

12. Questions

If “V&J; K\$U”; “L[W%I”, then what is the direction of the initial position of Train J and the final position of Train K with respect to the initial position of Train I, respectively?

- a. South, North-west
- b. South-west, South
- c. North-east, North-east
- d. North, East
- e. South-east, West

13. Questions

Which of the options denote that the final position of Train L is to the south-east of the initial position of Train I?

- a. U%I#V[L
- b. V#L@U&I
- c. X\$I&U#L
- d. W#I%X@L
- e. Both a and c

14. Questions

The distance between the junction and each of the given points is 10m. If “J\$V; X%L” and Train L travels 2m to the east from its final position, then what is the shortest distance between the final position of both Train J and Train L?

- a. 10m
- b. $\sqrt{96}$ m
- c. 24m
- d. $\sqrt{164}$ m
- e. 53m

15. Questions

If “I@X&L; W%J and K[U”;**then,which among the following statement(s) is/are true?**

- I). Train J’s final position is to the east of the initial position of Train L
- II). The initial positions of Train I and Train K are the same
- III). The initial position of Train L is to the north of the final position of Train J
- Only I
 - Only II and III
 - Only I and III
 - Only I and II
 - Only II

16. Questions

Study the following information carefully and answer the questions given below.

Input: Impression date lesson rabbinism build get postage share alphabet catechized

Step I: Share rabbinism postage lesson impression get date catechized build alphabet

Step II: Shar# rabbinis+ postag@ less0! impressio* ge% dat^ catechize* buil# alphabe\$

Step III:Shr1# rbbns19+ pstg16@ lss20! mprss38* g5% dt1^ ctchz20* bl30# lphb7\$

Step IV:hrs1# bbnrs19+ gpst16@ lss20! mprss38* g5% dt1^ cchtz20* bl30# bhlp7\$

Step V: hrs1# bbnrs9+ gpst6@ lss0! mprss8* g5% dt1^ cchtz0* bl0# bhlp7\$

Step V is the last step of the given arrangement

Based on the given logic, rearrange the given input.

Input: Master settings abandoner gallery key form circus tablesides jackfruit civil

Which of the following is second to the right of the third element from the left end in step II?

- galler@
- jackfrui+
- civi#
- maste!
- for^

@QuizByMickey

17. Questions

How many steps are required to get the final output?

- Five
- Ten

- c. Seven
- d. Six
- e. Eight

18. Questions

Which of the following elements is exactly placed between “k5%” and “bdnn4+” in step V?

- a. bdlst0*
- b. gllr6@
- c. gnstt4\$
- d. cv8#
- e. fr5^

19. Questions

What is the position of gnstt14\$ in step IV?

- a. Third from the right end
- b. Ninth from the left end
- c. Sixth from the right end
- d. Second from the left end
- e. Eight from the left end

20. Questions

How many elements are there between “mst6!” and “crc30!” in step III?

- a. Three
- b. One
- c. Five
- d. None
- e. Two

@QuizByMickey

Explanations:

1. Questions

Final arrangement:

We have,

- A sits second to the left of C, who is facing the centre of the table.
- Two persons sit between C and F.
- J sits third to the right of the one who faces F

From the above conditions, we have two possible cases,

Again, we have,

- One person sits between O and the one who faces R.
- R sits neither at the outer table nor adjacent to J.
- O sits opposite to K.
- L sits third to the left of the one who faces K.
- The number of persons sitting between L and R is **two less than** the number of persons sitting between B and the one who faces I (when counted from the left of both B and R).
- B doesn't sit at the inner table.

@QuizByMickey

From the above conditions, we get two more possibilities, i.e., case-1a and case-2a

Again, we have,

- D sits immediate right of the one who faces N, who sits adjacent to K.
- As many persons sit between N and M (when counted from the left of M) as between D and E (when counted from the right of E).
- E sits immediate right of P.

From the above conditions, case-1 , case-2, and case -2a get eliminated because D sits immediate right of the one who faces N, who sits adjacent to K , which is not satisfied Hence, case-1a shows the final arrangement.

Answer: A

2. Questions

Final arrangement:

@QuizByMickey

We have,

- A sits second to the left of C, who is facing the centre of the table.
- Two persons sit between C and F.
- J sits third to the right of the one who faces F

From the above conditions, we have two possible cases,

Again, we have,

- One person sits between O and the one who faces R.
- R sits neither at the outer table nor adjacent to J.
- O sits opposite to K.
- L sits third to the left of the one who faces K.
- The number of persons sitting between L and R is **two less than** the number of persons sitting between B and the one who faces I (when counted from the left of both B and R).
- B doesn't sit at the inner table.

From the above conditions, we get two more possibilities, i.e., case-1a and case-2a

@QuizByMickey

Again, we have,

- D sits immediate right of the one who faces N, who sits adjacent to K.
- As many persons sit between N and M (when counted from the left of M) as between D and E (when counted from the right of E).
- E sits immediate right of P.

From the above conditions, case-1, case-2, and case-2a get eliminated because D sits immediate right of the one who faces N, who sits adjacent to K, which is not satisfied. Hence, case-1a shows the final arrangement.

Answer: E

3. Questions

Final arrangement:

We have,

- A sits second to the left of C, who is facing the centre of the table.
- Two persons sit between C and F.
- J sits third to the right of the one who faces F

From the above conditions, we have two possible cases,

Again, we have,

- One person sits between O and the one who faces R.
- R sits neither at the outer table nor adjacent to J.
- O sits opposite to K.
- L sits third to the left of the one who faces K.
- The number of persons sitting between L and R is **two less than** the number of persons sitting between B and the one who faces I (when counted from the left of both B and R).
- B doesn't sit at the inner table.

From the above conditions, we get two more possibilities, i.e., case-1a and case-2a

Again, we have,

- D sits immediate right of the one who faces N, who sits adjacent to K.
- As many persons sit between N and M (when counted from the left of M) as between D and E (when counted from the right of E).
- E sits immediate right of P.

From the above conditions, case-1, case-2, and case -2a get eliminated because D sits immediate right of the one who faces N, who sits adjacent to K, which is not satisfied. Hence, case-1a shows the final arrangement.

Answer: B (All the persons sit at the outer table except the person in option b)

4. Questions

Final arrangement:

We have,

- A sits second to the left of C, who is facing the centre of the table.
- Two persons sit between C and F.
- J sits third to the right of the one who faces F

From the above conditions, we have two possible cases,

Again, we have,

- One person sits between O and the one who faces R.
- R sits neither at the outer table nor adjacent to J.
- O sits opposite to K.
- L sits third to the left of the one who faces K.
- The number of persons sitting between L and R is **two less than** the number of persons sitting between B and the one who faces I (when counted from the left of both B and R).
- B doesn't sit at the inner table.

@QuizByMickey

From the above conditions, we get two more possibilities, i.e., case-1a and case-2a

Again, we have,

- D sits immediate right of the one who faces N, who sits adjacent to K.
- As many persons sit between N and M (when counted from the left of M) as between D and E (when counted from the right of E).
- E sits immediate right of P.

From the above conditions, case-1, case-2, and case -2a get eliminated because D sits immediate right of the one who faces N, who sits adjacent to K, which is not satisfied. Hence, case-1a shows the final arrangement.

Answer: D

5. Questions

Final arrangement:

@QuizByMickey

We have,

- A sits second to the left of C, who is facing the centre of the table.
- Two persons sit between C and F.
- J sits third to the right of the one who faces F

From the above conditions, we have two possible cases,

Again, we have,

- One person sits between O and the one who faces R.
- R sits neither at the outer table nor adjacent to J.
- O sits opposite to K.
- L sits third to the left of the one who faces K.
- The number of persons sitting between L and R is **two less than** the number of persons sitting between B and the one who faces I (when counted from the left of both B and R).
- B doesn't sit at the inner table.

From the above conditions, we get two more possibilities, i.e., case-1a and case-2a

@QuizByMickey

Again, we have,

- D sits immediate right of the one who faces N, who sits adjacent to K.
- As many persons sit between N and M (when counted from the left of M) as between D and E (when counted from the right of E).
- E sits immediate right of P.

From the above conditions, case-1, case-2, and case-2a get eliminated because D sits immediate right of the one who faces N, who sits adjacent to K, which is not satisfied. Hence, case-1a shows the final arrangement.

Answer: C

6. Questions

Answer: D

V > T < R = Y, G = F ≥ U < I, B = R > G ≤ O, C ≥ J > O < X

I). V > I (V > T < R > G = F ≥ U < I) ⇒ False

F ≥ C (F = G ≤ O < J ≤ C) ⇒ False

II). R < U (R > G = F ≥ U) ⇒ False

J < T (J > O ≥ G < R > T) ⇒ False

III). G < C (G ≤ O < J ≤ C) ⇒ True

Y > U (Y = R > G = F ≥ U) ⇒ True

IV). X < I (X > O ≥ G = F ≥ U < I) ⇒ False

T < O (T < R > G ≤ O) ⇒ False

V). U ≤ C (U ≤ F = G ≤ O < J ≤ C) ⇒ False

J > I (J > O ≥ G = F ≥ U < I) ⇒ False

VI). F < B (F = G < R = B) ⇒ True

U < Y (U ≤ F = G < R = Y) ⇒ True

Only III and VI are true

7. Questions

Answer: A

A ≤ G > X < R, H ≥ E < B = Y, Y > R = C ≤ P, U = X ≤ K > D

I). A < U (A ≤ G > X = U) ⇒ False

H ≥ C (H ≥ E < B = Y > R = C) ⇒ False

II). D < Y (D < K ≥ X < R < Y) ⇒ False

G < P (G > X < R = C ≤ P) ⇒ False

III). R ≤ H (R < Y = B > E ≤ H) ⇒ False

@QuizByMickey

$C < A (C = R > X < G \geq A) \Rightarrow \text{False}$

IV). $C \geq U (C = R > X = U) \Rightarrow \text{False}$

$K \geq B (K \geq X < R < Y = B) \Rightarrow \text{False}$

V). $B > C (B = Y > R = C) \Rightarrow \text{True}$

$P > X (P \geq C = R > X) \Rightarrow \text{True}$

VI). $E \leq P (E < B = Y > R = C \leq P) \Rightarrow \text{False}$

$X > H (X < R < Y = B > E \leq H) \Rightarrow \text{False}$

Only V is true

8. Questions

Answer: C

$N > O \geq F > J, E < L \leq G > S, V < E = C = W, L \geq F = H \geq B$

I). $G > W (G \geq L > E = C = W) \Rightarrow \text{True}$

$N > B (N > O \geq F = H \geq B) \Rightarrow \text{True}$

II). $E \leq O (E < L \geq F \leq O) \Rightarrow \text{False}$

$S > B (S < G \geq L \geq F = H \geq B) \Rightarrow \text{False}$

III). $V \leq O (V < E < L \geq F \leq O) \Rightarrow \text{False}$

$N \geq W (N > O \geq F \leq L > E = C = W) \Rightarrow \text{False}$

IV). $C \geq H (C = E < L \geq F = H) \Rightarrow \text{False}$

$E < O (E < L \geq F \leq O) \Rightarrow \text{False}$

V). $B \leq G (B \leq H = F \leq L \leq G) \Rightarrow \text{True}$

$J < L (J < F \leq L) \Rightarrow \text{True}$

VI). $V < S (V < E < L \leq G > S) \Rightarrow \text{False}$

$J \leq C (J < F \leq L > E = C) \Rightarrow \text{False}$

Only I and V are true

9. Questions

Answer: B

$A = B \geq P < T, Q > E = D < V, E \leq F < U = W, S > B \geq D \geq R$

I). $A < W (A = B \geq D = E \leq F < U = W) \Rightarrow \text{False}$

$Q > S (Q > E = D \leq B < S) \Rightarrow \text{False}$

II). $W \geq R (W = U > F \geq E = D \geq R) \Rightarrow \text{False}$

$P \leq F (P \leq B \geq D = E \leq F) \Rightarrow \text{False}$

@QuizByMickey

III). $Q > A (Q > E = D \leq B = A) \Rightarrow \text{False}$

$T \leq S (T > P \leq B < S) \Rightarrow \text{False}$

IV). $U > R (U > F \geq E = D \geq R) \Rightarrow \text{True}$

$D < W (D = E \leq F < U = W) \Rightarrow \text{True}$

V). $W = B (W = U > F \geq E = D \leq B) \Rightarrow \text{False}$

$R > F (R \leq D = E \leq F) \Rightarrow \text{False}$

VI). $Q < S (Q > E = D \leq B < S) \Rightarrow \text{False}$

$P \leq W (P \leq B \geq D = E \leq F < U = W) \Rightarrow \text{False}$

Only IV is true

10. Questions

Answer: E

$P < Q \geq S \geq R, F > U \leq T < M, B > M \leq D = P, G \leq V = T > H$

I). $Q > U (Q > P = D \geq M > T \geq U) \Rightarrow \text{True}$

$P > T (P = D \geq M > T) \Rightarrow \text{True}$

II). $G \leq S (G \leq V = T < M \leq D = P < Q \geq S) \Rightarrow \text{False}$

$R \leq B (R \leq S \leq Q > P = D \geq M < B) \Rightarrow \text{False}$

III). $M > R (M \leq D = P < Q \geq S \geq R) \Rightarrow \text{False}$

$G \geq D (G \leq V = T < M \leq D) \Rightarrow \text{False}$

IV). $H < B (H < T < M < B) \Rightarrow \text{True}$

$M < Q (M \leq D = P < Q) \Rightarrow \text{True}$

V). $M \leq R (M \leq D = P < Q \geq S \geq R) \Rightarrow \text{False}$

$H \geq P (H < T < M \leq D = P) \Rightarrow \text{False}$

VI). $Q > F (Q > P = D \geq M > T \geq U < F) \Rightarrow \text{False}$

$G \leq B (G \leq V = T < M < B) \Rightarrow \text{False}$

Only I and IV are true

11. Questions

Answer: A

i). V%I

ii). I%W

iii). W&K

Note: If the train name mentioned as A means it is the starting point of Train A and if the train name

mentioned as A(+) means it is the ending point of Train A.

12. Questions

Answer: C

i). V&J

ii). K\$U

iii). L%W

iv). W%I

Note: If the train name mentioned as A means it is the starting point of Train A and if the train name mentioned as A(+) means it is the ending point of Train A.

@QuizByMickey

13. Questions

Answer: B

i). $V \# L$

ii). L@U

iii). U&I

Note: If the train name mentioned as A means it is the starting point of Train A and if the train name mentioned as A(+) means it is the ending point of Train A.

14. Questions

Answer: D

J\$V, X%L

$$JL=\sqrt{164}m$$

Note: If the train name mentioned as A means it is the starting point of Train A and if the train name mentioned as A(+) means it is the ending point of Train A.

15. Questions

Answer: E

i). I@X

ii). X&L

iii). W%J

iv). K?U

Note: If the train name mentioned as A means it is the starting point of Train A and if the train name mentioned as A(+) means it is the ending point of Train A.

16. Questions

Step-1: All the words are arranged in reverse alphabetical order from left to right.

Step-2: The last letter of each word is replaced by a symbol based on the total number of letters present in the word. If the number of letters is, 3-%, 4-^, 5-#, 6-!, 7-@, 8-\$, 9-+, 10-*.

Step-3: Drop all the vowels in each word. The sum of the place value of all the vowels in the word as per the alphabetical series is placed immediately before each symbol in each word.

Step-4: All the letters are arranged in alphabetical order from left to right in each word.

Step-5: If it is a two digit number then both the digits are multiplied until we get a single digit. If it is already a single digit then it will remain unchanged.

Input: Master settings abandoner gallery key form circus tablesides jackfruit civil

18. Questions

Step-1: All the words are arranged in reverse alphabetical order from left to right.

Step-2: The last letter of each word is replaced by a symbol based on the total number of letters present in the word. If the number of letters is, 3-%, 4-^, 5-#, 6-!, 7-@, 8-\$, 9-+, 10-*.

Step-3: Drop all the vowels in each word. The sum of the place value of all the vowels in the word as per the alphabetical series is placed immediately before each symbol in each word.

Step-4: All the letters are arranged in alphabetical order from left to right in each word.

Step-5: If it is a two digit number then both the digits are multiplied until we get a single digit. If it is already a single digit then it will remain unchanged.

Input: Master settings abandoner gallery key form circus tablesides jackfruit civil

Step I: Tablesides settings master key jackfruit gallery form civil circus abandoner

Step II: Tableside* setting\$ maste! ke% jackfrui+ galler@ for^ civi# circu! abandone+

Step III: Tblsd20* sttng14\$ mst6! k5% jckfr31+ gllr6@ fr15^ cv18# crc30! bndn22+

Step IV: bdlst20* gnstt14\$ mst6! k5% cfjkr31+ gllr6@ fr15^ cv18# ccr30! bdnn22+

Step V: bdlst0* gnstt4\$ mst6! k5% cfjkr3+ gllr6@ fr5^ cv8# ccr0! bdnn4+

Answer: E

19. Questions

Step-1: All the words are arranged in reverse alphabetical order from left to right.

Step-2: The last letter of each word is replaced by a symbol based on the total number of letters present in the word. If the number of letters is, 3-%, 4-^, 5-#, 6-!, 7-@, 8-\$, 9-+, 10-*.
