

1. Questions

Study the following data carefully and answer the questions:

Three persons A, B, and C went to visit a city, and the data given below is related to their expenditures on train fares, bus fares, food expenses, hotel rent, and other expenses.

The bar graph given below shows the following data:

Note:

- The sum of X and Y is 40.
- The total bus fare of B and C together is Rs. 225 less than the total other expenses of B and C together.

Find the correct combination of the questions given in column M with their answers given in column N:

Column M	Column N
P: Difference between the train fares of B and C	I: ₹200
Q: Difference between the other expenses of B and C	II: ₹90
R: Difference between the food expenses of A and B	III: ₹150
S: Difference between the bus fares of A and C	IV: ₹290
T: Difference between the food expenses of B and C	V: ₹100

- P-II, Q-I, R-III, S-V, T-IV
- P-III, Q-I, R-II, S-V, T-IV

- c. P-I, Q-V, R-III, S-II, T-IV
- d. P-III, Q-V, R-IV, S-I, T-II
- e. P-IV, Q-III, R-II, S-I, T-V

2. Questions

A series is formed, whose:

1st term = B's expenditure on bus fare

2nd term = C's expenditure on food

3rd term = B's other expenses

4th term = A's other expenses

5th term = B's expenditure on train fare

Then what will be the 6th term of the series?

- a. 1260
- b. 900
- c. 1050
- d. 925
- e. 1000

3. Questions

If the total amount spent by B were invested in a scheme that gives simple interest at the rate of R% per month, the total interest received by B after 10 years would have been Rs. 351. If the total amount spent by C were invested in a scheme that gives simple interest at the rate of 5R% per annum, then what would have been the total interest received by C after 15 months?

- a. Rs. 183.75
- b. Rs. 125.75
- c. Rs. 148.75
- d. Rs. 156.75
- e. Rs. 175.75

@QuizByMickey

4. Questions

Which of the following is/are not true?

U: Average of bus fares of A, B, and C is Rs. 275.

V: A's other expenses are $(X + Y)\%$ of his expenditure on hotel rent.

W: The ratio of total food expenses of A and C together to B's food expenses is 35: 27.

- a. Only V
- b. Only V and W
- c. Only U and W
- d. Only U
- e. Only W

5. Questions

If all the types of B's expenses are described in a circle, then what would have been the approximate difference between the degree distribution of B's expenditure on train fares and the degree distribution of B's expenditure on food expenses?

- a. 2.5°
- b. 7.3°
- c. 18.2°
- d. 11.6°
- e. Can't be determined

6. Questions

Study the following data carefully and answer the questions:

The given line chart shows the cumulative number of UPI transactions (in 100000's) and the percentage of the value of UPI transactions (in 10000000's) still respective month out of the number of UPI transactions (in 100000's) still respective month made in a city in five days.

For example: The value of UPI transactions (in 10000000's) still Wednesday is 60% of the number of UPI transactions (in 100000's) still Wednesday.

@QuizByMickey

Note:

i). The number of UPI transactions (in 100000's) = the value of UPI transactions (in 10000000's)/the per transaction UPI value (in Rs.)

If the average of the number of UPI transactions made on Thursday, Friday, and Saturday is 7 lakhs and the per transaction UPI value on Saturday is Rs. 200, then find the average of the values of UPI transactions made on Monday, Tuesday, and Saturday.

- Rs. 9 crore
- Rs. 6 crore
- Rs. 10 crore
- Rs. 5 crore
- Rs. 8 crore

7. Questions

@QuizByMickey

The ratio of per transaction UPI value on Monday to that on Wednesday is M: N. If the per transaction UPI value on Monday were Rs. $(2MN - 6)$ and that on Wednesday were Rs. $(M^2 + N^2 - 5)$, then what would have been the total value of UPI transactions made on Monday and Wednesday together?

Note: Both M and N are minimum possible values.

- Rs. 12 crore
- Rs. 15 crore

- c. Rs. 14 crore
- d. Rs. 13 crore
- e. Rs. 10 crore

8. Questions

If the number of UPI transactions made in another city on Monday, Tuesday, Wednesday, Thursday, and Friday is respectively 80%, 120%, 60%, 70%, and 80% of that made in the given city on the given days, then find the average of the number of UPI transactions made in another city on each of the given days.

- a. 6.8 lakhs
- b. 7.2 lakhs
- c. 6 lakhs
- d. 7 lakhs
- e. 6.7 lakhs

9. Questions

If the ratio of per transaction UPI value on Monday to that on Tuesday is A: B and the ratio of per transaction UPI value on Wednesday to that on Thursday is C: D, then find which of the following statements is/are true.

Note: Both A and B and both C and D are minimum possible values.

P: $AD = 2B + C$

Q: $D^3 = 5A - B + C$

R: A, B, C and D are prime numbers.

- a. None are true
- b. Only P
- c. Only Q and R
- d. Only P and R
- e. Only Q

@QuizByMickey

10. Questions

If the total number of UPI transactions made in all five days together is $16\frac{2}{3}\%$ of that made in the whole month and the total value (in crore rupees) of UPI transactions made in the whole month is 20% more than the total number of UPI transactions made in the whole month, then find the per transaction UPI value on month.

- a. Rs. 128 crore

- b. None of these
- c. Rs. 88 crore
- d. Rs. 120 crore
- e. Rs. 60 crore

11. Questions

The wrong term of series I, the wrong term of series II and the correct term of series II are denoted as a, b and c, respectively and the missing term of series III is denoted as d.

Series I: 431, 329, 261, 176, 125, 91

Series II: 731, 1330, 2203, 3383, 4923, 6871

Series III: 1877, 1864, ?, 1799, 1747, 1682

Which of the following statement(s) is/are true?

I). Both a and d are divisible by 3

II). $2(a + b) - 9 = c + d$

III). $a + c = d$

- a. Only I
- b. Only II
- c. Both I and III
- d. Only III
- e. None is true

12. Questions

Find the missing term of the following series.

Series: a, ?, 586, $(d/2 + 67)$, $(c + 276)$, 2511

- a. 381
- b. 286
- c. 361
- d. 486
- e. 311

@QuizByMickey

13. Questions

Solve the given series below and answer the following question.

Series: $(ay)^2$, N, 120y, 240x, 48a, 576

Note:

- i). Both 'x' and 'y' are the single digit prime numbers ($y > x$)
- ii). $xy = a$
- iii). $2a = 10x$
- iv). The value of 'a' is divided by both 5 and 10.

Which of the series follows the same pattern as the given question series?

- I). N, 400, 240, 192, 192, 234.4
 - II). 111, 122, 144, 210, 342, 738
 - III). 1250, 500, 300, 240, 240, 288
- a. Only III
 - b. Only I
 - c. Both I and II
 - d. All of them
 - e. Both I and III

14. Questions

If the series starts with $(x + y) * a$. Find the fourth term of the series.

Note: This series follows the same pattern as the above-mentioned series in direction.

- a. 14.44
- b. 12
- c. 16
- d. 13.44
- e. 11.22

15. Questions

Find the value of 'c' which is the 20% less than the value of 'y'.

- a. $2x$
- b. 40% of a
- c. $y - x$
- d. Both (a) and (c)
- e. Both (a) and (b)

16. Questions

Study the following data carefully and answer the questions:

Out of the total persons in a hall, some are Engineers, some are Doctors, some are Mechanics, and some are Govt officials. A person can have more than one occupation also.

- i). The total number of engineers, doctors, mechanics, and government officials in the room is 145, 100, 160, and 150, respectively.
- ii). The total number of only engineers and only doctors in the room is given by the roots of the equation: $x^2 - 60x + 800 = 0$ [Engineers > Doctors]
- iii). The total number of only mechanics and only govt officials in the room is given by the roots of the equation: $y^2 - 75y + 1250 = 0$ [Mechanics > Govt Officials].
- iv). The total persons who have all four occupations = 'z'
- v). The total persons who have doctor, mechanic, and government official but not engineer as occupation = 'z'
- vi). The total persons who have engineer, mechanic, and government official but not doctor as occupation $\div 2 = 'z'$
- vii). The total persons who have doctor, engineer, and government official but not mechanic as occupation $+ 5 = 'z'$
- viii). The total persons who have engineer, doctor, and mechanic but not government official as occupation $* 3 = 'z'$

Note: The total number of persons who have exactly 3 occupations is 60, and the total number of engineers who have at least two occupations other than doctor is 50.

What is the total number of doctors who have at least one more occupation other than government officials?

- a. 30
- b. 40
- c. 35
- d. 55
- e. 45

@QuizByMickey

17. Questions

If:

M = Total persons who have doctor, engineer, and mechanic but not government official as an occupation.

N = Total number of only doctors.

O = Total number of only engineers.

P = Total number of only engineers + Total number of only government officials.

Q = 95

If M, N, O, P, Q, R follows a certain logic, then find the value of R.

- a. 120
- b. 135
- c. 125
- d. 130
- e. 150

18. Questions

If out of total persons who have both engineers and mechanics as their occupation, $\frac{2}{5}^{\text{th}}$ are female, then find the total number of male persons who have both engineers and mechanics as their occupation.

- a. 30
- b. 25
- c. 40
- d. 60
- e. 45

19. Questions

What is the sum of the total number of persons present in the hall who have exactly two occupations?

- a. 80
- b. 90
- c. 120
- d. 100
- e. 75

20. Questions

@QuizByMickey

If M% of total persons present in the hall have more than one occupation, then find the total number of factors of value of 'M'.

- a. 2
- b. 3
- c. 4
- d. 1
- e. 5

Explanations:

1. Questions

Since, A's other expenses = Rs. 400

So, B's other expenses = 75% of 400 = Rs. 300

And C's other expenses = $(2 * 450) - 400 = \text{Rs. } 500$

Since, A's bus fare = Rs. 10X

So, B's bus fare = 90% of 10X = Rs. 9X

And C's bus fare = $(2 * 300) - 10X = \text{Rs. } (600 - 10X)$

Since, the total bus fare of B and C together is Rs 225 less than the total other expenses of B and C together.

So,

$$[300 + 500] - [9X + (600 - 10X)] = 225$$

$$800 - 9X - 600 + 10X = 225$$

$$X + 200 = 225$$

$$X = 25$$

Since, the sum of X and Y:

$$X + Y = 40$$

$$\text{So, } Y = 40 - 25$$

$$Y = 15$$

Type of expenses	A's expenditure	B's expenditure	C's expenditure
Train fare	$(3 * 25) * 10 = 750$	80% of 750 = 600	$2 * 600 - 750 = 450$
Bus fare	$25 * 10 = 250$	90% of 250 = 225	$2 * 300 - 250 = 350$
Food expenses	$(3 * 15) * 10 = 450$	120% of 450 = 540	$2 * 350 - 450 = 250$
Hotel rent	$(8 * 15) * 10 = 1200$	105% of 1200 = 1260	$2 * 1050 - 1200 = 900$
Other expenses	400	75% of 400 = 300	$2 * 450 - 400 = 500$

Answer: B

Difference between the train fares of B and C = $600 - 450 = \text{Rs. } 150$

Difference between the other expenses of B and C = $500 - 300 = \text{Rs. } 200$

Difference between the food expenses of A and B = $540 - 450 = \text{Rs. } 90$

Difference between the bus fares of A and C = $350 - 250 = \text{Rs. } 100$

Difference between the food expenses of B and C = $540 - 250 = \text{Rs. } 290$

So, the correct combination: P-III, Q-I, R-II, S-V, T-IV

2. Questions

Since, A's other expenses = Rs. 400

So, B's other expenses = 75% of 400 = Rs. 300

And C's other expenses = $(2 * 450) - 400 = \text{Rs. } 500$

Since, A's bus fare = Rs. 10X

So, B's bus fare = 90% of 10X = Rs. 9X

And C's bus fare = $(2 * 300) - 10X = \text{Rs. } (600 - 10X)$

Since, the total bus fare of B and C together is Rs 225 less than the total other expenses of B and C together.

So,

$$[300 + 500] - [9X + (600 - 10X)] = 225$$

$$800 - 9X - 600 + 10X = 225$$

$$X + 200 = 225$$

$$X = 25$$

Since, the sum of X and Y:

$$X + Y = 40$$

$$\text{So, } Y = 40 - 25$$

$$Y = 15$$

Type of expenses	A's expenditure	B's expenditure	C's expenditure
Train fare	$(3 * 25) * 10 = 750$	80% of 750 = 600	$2 * 600 - 750 = 450$
Bus fare	$25 * 10 = 250$	90% of 250 = 225	$2 * 300 - 250 = 350$
Food expenses	$(3 * 15) * 10 = 450$	120% of 450 = 540	$2 * 350 - 450 = 250$
Hotel rent	$(8 * 15) * 10 = 1200$	105% of 1200 = 1260	$2 * 1050 - 1200 = 900$
Other expenses	400	75% of 400 = 300	$2 * 450 - 400 = 500$

Answer: E

1st term of the series = B's expenditure on bus fare = 225

2nd term of the series = C's expenditure on food = 250

3rd term of the series = B's other expenses = 300

4th term of the series = A's other expenses = 400

5th term of the series = B's expenditure on train fare = 600

The logic in the series:

$$225 + 25 = 250$$

$$250 + 50 = 300$$

$$300 + 100 = 400$$

$$400 + 200 = 600$$

So, the 6th term of the series = $600 + 400 = 1000$

3. Questions

Since, A's other expenses = Rs. 400

So, B's other expenses = 75% of 400 = Rs. 300

And C's other expenses = $(2 * 450) - 400 = \text{Rs. } 500$

Since, A's bus fare = Rs. 10X

So, B's bus fare = 90% of 10X = Rs. 9X

And C's bus fare = $(2 * 300) - 10X = \text{Rs. } (600 - 10X)$

Since, the total bus fare of B and C together is Rs 225 less than the total other expenses of B and C together.

So,

$$[300 + 500] - [9X + (600 - 10X)] = 225$$

$$800 - 9X - 600 + 10X = 225$$

$$X + 200 = 225$$

$$X = 25$$

Since, the sum of X and Y:

$$X + Y = 40$$

$$\text{So, } Y = 40 - 25$$

$$Y = 15$$

@QuizByMickey

Type of expenses	A's expenditure	B's expenditure	C's expenditure
Train fare	$(3 * 25) * 10 = 750$	80% of 750 = 600	$2 * 600 - 750 = 450$
Bus fare	$25 * 10 = 250$	90% of 250 = 225	$2 * 300 - 250 = 350$
Food expenses	$(3 * 15) * 10 = 450$	120% of 450 = 540	$2 * 350 - 450 = 250$
Hotel rent	$(8 * 15) * 10 = 1200$	105% of 1200 = 1260	$2 * 1050 - 1200 = 900$
Other expenses	400	75% of 400 = 300	$2 * 450 - 400 = 500$

Answer: A

Since, the total amount spent by B = $600 + 225 + 540 + 1260 + 300 = \text{Rs. } 2925$

And the SI received by B at the rate of R% rate per month after 10 years = Rs. 351

So,

$$(2925 * R * 10)/100 = 351$$

$$R = 1.2\%$$

Since, the total amount spent by C = $450 + 350 + 250 + 900 + 500 = \text{Rs. } 2450$

And the rate of interest = $5 * 1.2 = 6\%$ per annum

So, the SI received by C at the rate of 6% per annum after 15 months = $(2450 * 6 * 15)/(100 * 12) = \text{Rs. } 183.75$

4. Questions

Since, A's other expenses = Rs. 400

So, B's other expenses = 75% of 400 = Rs. 300

And C's other expenses = $(2 * 450) - 400 = \text{Rs. } 500$

Since, A's bus fare = Rs. 10X

So, B's bus fare = 90% of 10X = Rs. 9X

And C's bus fare = $(2 * 300) - 10X = \text{Rs. } (600 - 10X)$

Since, the total bus fare of B and C together is Rs 225 less than the total other expenses of B and C together.

@QuizByMickey

So,

$$[300 + 500] - [9X + (600 - 10X)] = 225$$

$$800 - 9X - 600 + 10X = 225$$

$$X + 200 = 225$$

$$X = 25$$

Since, the sum of X and Y:

$$X + Y = 40$$

So, $Y = 40 - 25$

$Y = 15$

Type of expenses	A's expenditure	B's expenditure	C's expenditure
Train fare	$(3 * 25) * 10 = 750$	80% of 750 = 600	$2 * 600 - 750 = 450$
Bus fare	$25 * 10 = 250$	90% of 250 = 225	$2 * 300 - 250 = 350$
Food expenses	$(3 * 15) * 10 = 450$	120% of 450 = 540	$2 * 350 - 450 = 250$
Hotel rent	$(8 * 15) * 10 = 1200$	105% of 1200 = 1260	$2 * 1050 - 1200 = 900$
Other expenses	400	75% of 400 = 300	$2 * 450 - 400 = 500$

Answer: A

From U:

Average of bus fares of A, B and C = $(250 + 225 + 350)/3 = \text{Rs. } 275$

So, U is true.

From V:

A's other expenses = Rs. 400

A's expenditure on hotel rent = Rs. 1200

Required percentage = $(400/1200) * 100 = 33(1/3)\%$

Since, the value of $(X + Y) = (25 + 15) = 40$

So, V is not true.

From W:

Total food expenses of A and C together = $450 + 250 = \text{Rs. } 700$

B's food expenses = Rs. 540

Since, the required ratio = $700: 540 = 35: 27$

So, W is true.

Hence, only V is not true.

5. Questions

Since, A's other expenses = Rs. 400

So, B's other expenses = 75% of 400 = Rs. 300

And C's other expenses = $(2 * 450) - 400 = \text{Rs. } 500$

Since, A's bus fare = Rs. 10X

So, B's bus fare = 90% of 10X = Rs. 9X

And C's bus fare = $(2 * 300) - 10X = \text{Rs. } (600 - 10X)$

@QuizByMickey

Since, the total bus fare of B and C together is Rs 225 less than the total other expenses of B and C together.

So,

$$[300 + 500] - [9X + (600 - 10X)] = 225$$

$$800 - 9X - 600 + 10X = 225$$

$$X + 200 = 225$$

$$X = 25$$

Since, the sum of X and Y:

$$X + Y = 40$$

$$\text{So, } Y = 40 - 25$$

$$Y = 15$$

Type of expenses	A's expenditure	B's expenditure	C's expenditure
Train fare	$(3 * 25) * 10 = 750$	80% of 750 = 600	$2 * 600 - 750 = 450$
Bus fare	$25 * 10 = 250$	90% of 250 = 225	$2 * 300 - 250 = 350$
Food expenses	$(3 * 15) * 10 = 450$	120% of 450 = 540	$2 * 350 - 450 = 250$
Hotel rent	$(8 * 15) * 10 = 1200$	105% of 1200 = 1260	$2 * 1050 - 1200 = 900$
Other expenses	400	75% of 400 = 300	$2 * 450 - 400 = 500$

Answer: B

Since, the sum of the all types of B's expenses = $600 + 225 + 540 + 1260 + 300 = \text{Rs. } 2925$

So, the degree distribution of B's expenditure on train fare = $360 * (600/2925) = 73.8^\circ$ (approx.)

And the degree distribution of B's expenditure on food expenses = $360 * (540/2925) = 66.5^\circ$ (approx.)

Required difference = $73.8 - 66.5 = 7.3^\circ$

6. Questions

In 100000's = in lakhs

In 10000000's = in crores

@QuizByMickey

Days	The number of UPI transactions (in lakhs)	The value of UPI transactions (in crores)
On Monday	10	70% of 10 = 7
Till Tuesday	15	80% of 15 = 12
Till Wednesday	30	60% of 30 = 18
Till Thursday	40	75% of 40 = 30
Till Friday	45	80% of 45 = 36

Days	The number of UPI transactions (in lakhs)	The value of UPI transactions (in crores)
On Monday	10	7
On Tuesday	$15 - 10 = 5$	$12 - 7 = 5$
On Wednesday	$30 - 15 = 15$	$18 - 12 = 6$
On Thursday	$40 - 30 = 10$	$30 - 18 = 12$
On Friday	$45 - 40 = 5$	$36 - 30 = 6$

Answer: E

Since, the average of the number of UPI transactions made on Thursday, Friday, and Saturday = 7 lakhs

So, the number of UPI transactions made on Saturday = $(3 * 7) - (10 + 5) = 6$ lakhs

Since, the per transaction UPI value on Saturday = Rs. 200

So, the total value of UPI transactions made on Saturday = $600000 * 200 = 120000000 = \text{Rs. 12 crore}$

Since, the value of UPI transactions made on Monday = Rs. 7 crore

And the value of UPI transactions made on Tuesday = Rs. 5 crore

So, the required average = $(7 + 5 + 12)/3 = \text{Rs. 8 crore}$

7. Questions

In 100000's = in lakhs

In 10000000's = in crores

Days	The number of UPI transactions (in lakhs)	The value of UPI transactions (in crores)
On Monday	10	70% of 10 = 7
Till Tuesday	15	80% of 15 = 12
Till Wednesday	30	60% of 30 = 18
Till Thursday	40	75% of 40 = 30
Till Friday	45	80% of 45 = 36

Days	The number of UPI transactions (in lakhs)	The value of UPI transactions (in crores)
On Monday	10	7
On Tuesday	$15 - 10 = 5$	$12 - 7 = 5$
On Wednesday	$30 - 15 = 15$	$18 - 12 = 6$
On Thursday	$40 - 30 = 10$	$30 - 18 = 12$
On Friday	$45 - 40 = 5$	$36 - 30 = 6$

Answer: C

Since, the per transaction UPI value on Monday = $700000000/1000000 = \text{Rs. } 70$

And the per transaction UPI value on Wednesday = $600000000/1500000 = \text{Rs. } 40$

So, M: N = 70: 40

M: N = 7: 4

Since, the new per transaction UPI value on Monday = $(2MN - 6) = (2 * 7 * 4 - 6) = \text{Rs. } 50$

So, the total value of UPI transactions made on Monday would be = $1000000 * 50 = \text{Rs. } 50000000 = \text{Rs. } 5$ crore

Since, the new per transaction UPI value on Wednesday = $(M^2 + N^2 - 5) = (7^2 + 4^2 - 5) = \text{Rs. } 60$

So, the total value of UPI transactions made on Wednesday would be = $1500000 * 60 = \text{Rs. } 90000000 = \text{Rs. } 9$ crore

And the required sum = $5 + 9 = \text{Rs. } 14$ crore

8. Questions

In 100000's = in lakhs

In 10000000's = in crores

Days	The number of UPI transactions (in lakhs)	The value of UPI transactions (in crores)
On Monday	10	70% of 10 = 7
Till Tuesday	15	80% of 15 = 12
Till Wednesday	30	60% of 30 = 18
Till Thursday	40	75% of 40 = 30
Till Friday	45	80% of 45 = 36

Days	The number of UPI transactions (in lakhs)	The value of UPI transactions (in crores)
On Monday	10	7
On Tuesday	$15 - 10 = 5$	$12 - 7 = 5$
On Wednesday	$30 - 15 = 15$	$18 - 12 = 6$
On Thursday	$40 - 30 = 10$	$30 - 18 = 12$
On Friday	$45 - 40 = 5$	$36 - 30 = 6$

Answer: A

Since, the number of UPI transactions made in given city on Monday = 10 lakhs

So, the number of UPI transactions made in another city on Monday = 80% of 10 = 8 lakhs

Since, the number of UPI transactions made in given city on Tuesday = 5 lakhs

So, the number of UPI transactions made in another city on Tuesday = 120% of 5 = 6 lakhs

Since, the number of UPI transactions made in given city on Wednesday = 15 lakhs

So, the number of UPI transactions made in another city on Wednesday = 60% of 15 = 9 lakhs

Since, the number of UPI transactions made in given city on Thursday = 10 lakhs

So, the number of UPI transactions made in another city on Thursday = 70% of 10 = 7 lakhs

Since, the number of UPI transactions made in given city on Friday = 5 lakhs

So, the number of UPI transactions made in another city on Friday = 80% of 5 = 4 lakhs

Required average = $(8 + 6 + 9 + 7 + 4)/5 = 6.8$ lakhs

9. Questions

In 100000's = in lakhs

In 10000000's = in crores

Days	The number of UPI transactions (in lakhs)	The value of UPI transactions (in crores)
On Monday	10	70% of 10 = 7
Till Tuesday	15	80% of 15 = 12
Till Wednesday	30	60% of 30 = 18
Till Thursday	40	75% of 40 = 30
Till Friday	45	80% of 45 = 36

Days	The number of UPI transactions (in lakhs)	The value of UPI transactions (in crores)
On Monday	10	7
On Tuesday	15 – 10 = 5	12 – 7 = 5
On Wednesday	30 – 15 = 15	18 – 12 = 6
On Thursday	40 – 30 = 10	30 – 18 = 12
On Friday	45 – 40 = 5	36 – 30 = 6

Answer: B

Since, the per transaction UPI value on Monday = $70000000/1000000 = \text{Rs. } 70$

And the per transaction UPI value on Tuesday = $50000000/500000 = \text{Rs. } 100$

So, A: B = 70: 100

A: B = 7: 10

Since, the per transaction UPI value on Wednesday = $60000000/1500000 = \text{Rs. } 40$

And the per transaction UPI value on Thursday = $120000000/1000000 = \text{Rs. } 120$

So, C: D = 40: 120

C: D = 1: 3

From P:

$$AD = 2B + C$$

$$7 * 3 = 2 * 10 + 1$$

$$21 = 21$$

So, P is true.

From Q:

$$D^3 = 5A - B + C$$

$$3^3 = 5 * 7 - 10 + 1$$

$$27 = 35 - 10 + 1$$

$$27 = 26$$

So, Q is not true.

From R:

$$A = 7, B = 10, C = 1, D = 3$$

Since, only 7 and 3 are prime numbers.

So, R is not true.

Hence, only P is true.

10. Questions

In 100000's = in lakhs

In 10000000's = in crores

Days	The number of UPI transactions (in lakhs)	The value of UPI transactions (in crores)
On Monday	10	70% of 10 = 7
Till Tuesday	15	80% of 15 = 12
Till Wednesday	30	60% of 30 = 18
Till Thursday	40	75% of 40 = 30
Till Friday	45	80% of 45 = 36

Days	The number of UPI transactions (in lakhs)	The value of UPI transactions (in crores)
On Monday	10	7
On Tuesday	$15 - 10 = 5$	$12 - 7 = 5$
On Wednesday	$30 - 15 = 15$	$18 - 12 = 6$
On Thursday	$40 - 30 = 10$	$30 - 18 = 12$
On Friday	$45 - 40 = 5$	$36 - 30 = 6$

Answer: D

Since, the total number of UPI transactions made in all the five days together = $10 + 5 + 15 + 10 + 5 = 45$ lakhs

So, the total number of UPI transactions made in the whole month = $45 * (300/50) = 270$ lakhs

The total value of UPI transactions made in the whole month = $270 * (120/100) = 324$ crore

And the per transaction UPI value on month = $324 \text{ crores} / 270 \text{ lakhs} = \text{Rs. } 120 \text{ crore}$

11. Questions

Answer: B

From Series I:

431	329	244	176	125	91
-102	-85	-68	-51	-34	
17	17	17	17	17	

Thus, the wrong number is **261**.

From Series II:

$$9^3 + 2 = 731$$

$$11^3 + 4 = \mathbf{1335}$$

$$13^3 + 6 = 2203$$

$$15^3 + 8 = 3383$$

$$17^3 + 10 = 4923$$

$$19^3 + 12 = 6871$$

Thus, the wrong number and the correct number are 1330 and 1335, respectively.

From Series III:

1877	1864	1838	1799	1747	1682
------	------	-------------	------	------	------

@QuizByMickey

-13 -26 -39 -52 -65

Thus, the missing number is **1838**.

From the given all three series, we get

$$a = 261$$

$$b = 1330$$

$$c = 1335$$

$$d = 1838$$

Let,

I). Both a and d are divisible by 3.

d (1838) is not divisible by 3

So, this is not true.

II). $2(a + b) - 9 = c + d$

Let,

$$2(a + b) - 9 = 2(261 + 1330) - 9 = 3173$$

$$c + d = 1335 + 1838 = 3173$$

So, this is true.

III). $a + c = d$

Let,

$$261 + 1335 = 1596$$

$$1596 \neq 1838$$

So, this is not true.

Hence, the statement II only is true.

12. Questions

Answer: C

From the given Series,

$$261, ?, 586, (919 + 67), (1335 + 276), 2511$$

$$261, ?, 586, 986, 1611, 2511$$

Let,

$$261 \qquad \qquad \mathbf{361} \qquad \qquad 586 \qquad \qquad 986 \qquad \qquad 1611 \qquad \qquad 2511$$

$$10^2 \qquad \qquad 15^2 \qquad \qquad 20^2 \qquad \qquad 25^2 \qquad \qquad 30^2$$

Thus, the missing number is **361**.

@QuizByMickey

13. Questions

$$xy = a \rightarrow (1)$$

$$2a = 10x \rightarrow (2)$$

Equation (1) is substitute in (2), then we get

$$2xy = 10x$$

$$2y = 10$$

$$y = 5$$

So, x must be 2 or 3

$$\text{If } (x = 3)$$

$$(1) \rightarrow 3 * 5 = a$$

$$a = 15$$

15 is divided by 5 but not 10.

So, this is not satisfied.

$$\text{If } (x = 2)$$

$$(1) \rightarrow 2 * 5 = a$$

$$a = 10$$

10 is divided by both 5 and 10.

So, this is satisfied.

So the series,

$$(ay)^2, N, 120y, 240x, 48a, 576$$

$$2500, N, 600, 480, 480, 576$$

Let,

2500	1000	600	480	480	576
	*0.4	*0.6	*0.8	*1	*1.2

$$N = 1000$$

Answer: A

$$\text{D. } N, 400, 240, 192, 192, 234.4$$

1000	400	240	192	192	230.4
	*0.4	*0.6	*0.8	*1	*1.2

This series does not follow the same pattern as the above series.

$$\text{II. } 111, 122, 144, 210, 342, 738$$

111	122	144	210	342	738
	+11	+22	+66	+132	+396
	*2	*3	*2	*3	

This series does not follow the same pattern as the above series.

III). 1250, 500, 300, 240, 240, 288

1250	500	300	240	240	288
	*0.4	*0.6	*0.8	*1	*1.2

This series follows the same pattern as the above series.

Hence, the option A is correct.

14. Questions

$$xy = a \rightarrow (1)$$

$$2a = 10x \rightarrow (2)$$

Equation (1) is substitute in (2), then we get

$$2xy = 10x$$

$$2y = 10$$

$$y = 5$$

So, x must be 2 or 3

$$\text{If } (x = 3)$$

$$(1) \rightarrow 3 * 5 = a$$

$$a = 15$$

15 is divided by 5 but not 10.

So, this is not satisfied.

$$\text{If } (x = 2)$$

$$(1) \rightarrow 2 * 5 = a$$

$$a = 10$$

10 is divided by both 5 and 10.

So, this is satisfied.

So the series,

$$(ay)^2, N, 120y, 240x, 48a, 576$$

$$2500, N, 600, 480, 480, 576$$

Let,

@QuizByMickey

2500 **1000** 600 480 480 576

*0.4 *0.6 *0.8 *1 *1.2

N = 1000

Answer: D

According to the question,

$$(x + y) * a = (2 + 5) * 10 = 70$$

70 28 16.8 **13.44**

*0.4 *0.6 *0.8

So, the fourth term of the series is 13.44.

15. Questions

$$xy = a \text{ ---> (1)}$$

$$2a = 10x \text{ ---> (2)}$$

Equation (1) is substitute in (2), then we get

$$2xy = 10x$$

$$2y = 10$$

$$y = 5$$

So, x must be 2 or 3

$$\text{If } (x = 3)$$

$$(1) \text{ ---> } 3 * 5 = a$$

$$a = 15$$

15 is divided by 5 but not 10.

So, this is not satisfied.

$$\text{If } (x = 2)$$

$$(1) \text{ ---> } 2 * 5 = a$$

$$a = 10$$

10 is divided by both 5 and 10.

So, this is satisfied.

So the series,

$$(ay)^2, N, 120y, 240x, 48a, 576$$

$$2500, N, 600, 480, 480, 576$$

Let,

@QuizByMickey

2500 1000 600 480 480 576

*0.4 *0.6 *0.8 *1 *1.2

N = 1000

Answer: E

According to the question,

c = 80% of 5

c = 4

Let,

a). $2x = 2 * 2 = 4$

b). 40% of a = 40% of 10 = 4

c). $y - x = 5 - 2 = 3$

Hence, the option E is correct.

16. Questions

The total number of engineers in the room = 145

The total number of doctors in the room = 100

The total number of mechanics in the room = 160

The total number of government officials in the room = 150

$$x^2 - 60x + 800 = 0$$

$$x^2 - 20x - 40x + 800 = 0$$

$$x(x - 20) - 40(x - 20) = 0$$

$$(x - 20)(x - 40) = 0$$

x = 20 and 40

Since, only Engineers > only Doctors

The total number of only engineers in the room = 40

The total number of only doctors in the room = 20

$$y^2 - 75y + 1250 = 0$$

$$y^2 - 25y - 50y + 1250 = 0$$

$$y(y - 25) - 50(y - 25) = 0$$

$$(y - 25)(y - 50) = 0$$

y = 25 and 50

@QuizByMickey

Since, only Mechanics > only government Officials

The total number of only mechanics in the room = 50

The total number of only government officials in the room = 25

Total persons who have all the four occupations = 'z'

The total persons who have doctor, mechanic, and government official but not engineer as occupation = 'z'

The total persons who have engineer, mechanic, and government official but not doctor as occupation = '2z'

The total persons who have doctor, engineer, and government official but not mechanic as occupation = 'z-5'

The total persons who have engineer, doctor, and mechanic but not government official as occupation = 'z/3'

Total number of persons who have exactly 3 occupations = 60

$$(z - 5) + 2z + (z/3) + z = 60$$

$$3z - 15 + 6z + z + 3z = 180$$

$$13z = 195$$

$$z = 15$$

The total persons who have all the four occupations = 'z' = 15

The total persons who have doctor, mechanic, and government official but not engineer as occupation = 'z' = 15

The total persons who have engineer, mechanic, and government official but not doctor as occupation = '2z' = 30

The total persons who have doctor, engineer, and government official but not mechanic as occupation = 'z -

@QuizByMickey

$$5' = 10$$

The total persons who have engineer, doctor, and mechanic but not government official as occupation = 'z/3' = 5

Let total persons who have only engineer and doctor as occupation = 'a'

Let total persons who have only doctor and mechanic as occupation = 'b'

Let total persons who have only mechanic and govt official as occupation = 'c'

Let total persons who have only govt official and engineer as occupation = 'd'

According to the question:

$$40 + 10 + 30 + 15 + 5 + a + d = 145 \Rightarrow a + d = 45 \dots\dots\dots (1)$$

$$20 + 10 + 15 + 15 + 5 + a + b = 100 \Rightarrow a + b = 35 \dots\dots\dots (2)$$

$$50 + 30 + 15 + 15 + 5 + b + c = 160 \Rightarrow b + c = 45 \dots\dots\dots (3)$$

$$25 + 30 + 10 + 15 + 15 + c + d = 150 \Rightarrow c + d = 55 \dots\dots\dots (4)$$

Total number of engineers who have at least two occupations other than doctor = 50

$$d + 30 = 50$$

$$d = 20$$

From equation (1):

$$a = 45 - 20 = 25$$

From equation (2):

$$b = 35 - 25 = 10$$

From equation (3):

$$c = 45 - 10 = 35$$

@QuizByMickey

Answer: B

Total number of doctors who have at least one more occupation other than govt officials = $25 + 5 + 10 = 40$

17. Questions

The total number of engineers in the room = 145

The total number of doctors in the room = 100

The total number of mechanics in the room = 160

The total number of government officials in the room = 150

$$x^2 - 60x + 800 = 0$$

$$x^2 - 20x - 40x + 800 = 0$$

$$x(x - 20) - 40(x - 20) = 0$$

$$(x - 20)(x - 40) = 0$$

$$x = 20 \text{ and } 40$$

Since, only Engineers > only Doctors

The total number of only engineers in the room = 40

The total number of only doctors in the room = 20

$$y^2 - 75y + 1250 = 0$$

$$y^2 - 25y - 50y + 1250 = 0$$

$$y(y - 25) - 50(y - 25) = 0$$

@QuizByMickey

$$(y - 25)(y - 50) = 0$$

$$y = 25 \text{ and } 50$$

Since, only Mechanics > only government Officials

The total number of only mechanics in the room = 50

The total number of only government officials in the room = 25

Total persons who have all the four occupations = 'z'

The total persons who have doctor, mechanic, and government official but not engineer as occupation = 'z'

The total persons who have engineer, mechanic, and government official but not doctor as occupation = '2z'

The total persons who have doctor, engineer, and government official but not mechanic as occupation = 'z-5'

The total persons who have engineer, doctor, and mechanic but not government official as occupation = 'z/3'

Total number of persons who have exactly 3 occupations = 60

$$(z - 5) + 2z + (z/3) + z = 60$$

$$3z - 15 + 6z + z + 3z = 180$$

$$13z = 195$$

$$z = 15$$

The total persons who have all the four occupations = 'z' = 15

The total persons who have doctor, mechanic, and government official but not engineer as occupation = 'z' = 15

The total persons who have engineer, mechanic, and government official but not doctor as occupation = '2z'

@QuizByMickey

= 30

The total persons who have doctor, engineer, and government official but not mechanic as occupation = 'z - 5' = 10

The total persons who have engineer, doctor, and mechanic but not government official as occupation = 'z/3' = 5

Let total persons who have only engineer and doctor as occupation = 'a'

Let total persons who have only doctor and mechanic as occupation = 'b'

Let total persons who have only mechanic and govt official as occupation = 'c'

Let total persons who have only govt official and engineer as occupation = 'd'

According to the question:

$$40 + 10 + 30 + 15 + 5 + a + d = 145 \Rightarrow a + d = 45 \dots\dots\dots (1)$$

$$20 + 10 + 15 + 15 + 5 + a + b = 100 \Rightarrow a + b = 35 \dots\dots\dots (2)$$

$$50 + 30 + 15 + 15 + 5 + b + c = 160 \Rightarrow b + c = 45 \dots\dots\dots (3)$$

$$25 + 30 + 10 + 15 + 15 + c + d = 150 \Rightarrow c + d = 55 \dots\dots\dots (4)$$

Total number of engineers who have at least two occupations other than doctor = 50

$$d + 30 = 50$$

$$d = 20$$

From equation (1):

$$a = 45 - 20 = 25$$

From equation (2):

$$b = 35 - 25 = 10$$

From equation (3):

$$c = 45 - 10 = 35$$

@QuizByMickey

Answer: D

M = Total persons who have doctor, engineer, and mechanic but not govt official as occupation = 5

N = Total number of only doctors = 20

O = Total number of only engineers = 40

P = Total number of only engineers + Total number of only govt officials = 40 + 25 = 65

Q = 95

Now,

5, 20, 40, 65, 95, R

The logic is:

5	20	40	65	95	R
	+15	+20	+25	+30	+35
	+5	+5	+5	+5	

R = 95 + 35 = 130

Hence, R = 130

18. Questions

The total number of engineers in the room = 145

The total number of doctors in the room = 100

The total number of mechanics in the room = 160

The total number of government officials in the room = 150

@QuizByMickey

$$x^2 - 60x + 800 = 0$$

$$x^2 - 20x - 40x + 800 = 0$$

$$x(x - 20) - 40(x - 20) = 0$$

$$(x - 20)(x - 40) = 0$$

$$x = 20 \text{ and } 40$$

Since, only Engineers > only Doctors

The total number of only engineers in the room = 40

The total number of only doctors in the room = 20

$$y^2 - 75y + 1250 = 0$$

$$y^2 - 25y - 50y + 1250 = 0$$

$$y(y - 25) - 50(y - 25) = 0$$

$$(y - 25)(y - 50) = 0$$

$$y = 25 \text{ and } 50$$

Since, only Mechanics > only government Officials

The total number of only mechanics in the room = 50

The total number of only government officials in the room = 25

Total persons who have all the four occupations = 'z'

The total persons who have doctor, mechanic, and government official but not engineer as occupation = 'z'

The total persons who have engineer, mechanic, and government official but not doctor as occupation = '2z'

The total persons who have doctor, engineer, and government official but not mechanic as occupation = 'z-5'

The total persons who have engineer, doctor, and mechanic but not government official as occupation = 'z/3'

@QuizByMickey

Total number of persons who have exactly 3 occupations = 60

$$(z - 5) + 2z + (z/3) + z = 60$$

$$3z - 15 + 6z + z + 3z = 180$$

$$13z = 195$$

$$z = 15$$

The total persons who have all the four occupations = 'z' = 15

The total persons who have doctor, mechanic, and government official but not engineer as occupation = 'z' = 15

The total persons who have engineer, mechanic, and government official but not doctor as occupation = '2z' = 30

The total persons who have doctor, engineer, and government official but not mechanic as occupation = 'z - 5' = 10

The total persons who have engineer, doctor, and mechanic but not government official as occupation = 'z/3' = 5

Let total persons who have only engineer and doctor as occupation = 'a'

Let total persons who have only doctor and mechanic as occupation = 'b'

Let total persons who have only mechanic and govt official as occupation = 'c'

Let total persons who have only govt official and engineer as occupation = 'd'

According to the question:

$$40 + 10 + 30 + 15 + 5 + a + d = 145 \Rightarrow a + d = 45 \dots\dots\dots (1)$$

$$20 + 10 + 15 + 15 + 5 + a + b = 100 \Rightarrow a + b = 35 \dots\dots\dots (2)$$

@QuizByMickey

$$50 + 30 + 15 + 15 + 5 + b + c = 160 \Rightarrow b + c = 45 \dots\dots\dots (3)$$

$$25 + 30 + 10 + 15 + 15 + c + d = 150 \Rightarrow c + d = 55 \dots\dots\dots (4)$$

Total number of engineers who have at least two occupations other than doctor = 50

$$d + 30 = 50$$

$$d = 20$$

From equation (1):

$$a = 45 - 20 = 25$$

From equation (2):

$$b = 35 - 25 = 10$$

From equation (3):

$$c = 45 - 10 = 35$$

Answer: A

The total persons who have both engineers and mechanics as their occupation = $30 + 15 + 5 = 50$

The total female persons who have both engineers and mechanics as their occupation = $50 * \frac{2}{5} = 20$

The total number of male persons who have both engineers and mechanics as their occupation = $50 - 20 = 30$

19. Questions

The total number of engineers in the room = 145

The total number of doctors in the room = 100

The total number of mechanics in the room = 160

The total number of government officials in the room = 150

$$x^2 - 60x + 800 = 0$$

$$x^2 - 20x - 40x + 800 = 0$$

$$x(x - 20) - 40(x - 20) = 0$$

$$(x - 20)(x - 40) = 0$$

$$x = 20 \text{ and } 40$$

Since, only Engineers > only Doctors

The total number of only engineers in the room = 40

The total number of only doctors in the room = 20

$$y^2 - 75y + 1250 = 0$$

$$y^2 - 25y - 50y + 1250 = 0$$

$$y(y - 25) - 50(y - 25) = 0$$

$$(y - 25)(y - 50) = 0$$

$$y = 25 \text{ and } 50$$

Since, only Mechanics > only government Officials

The total number of only mechanics in the room = 50

The total number of only government officials in the room = 25

Total persons who have all the four occupations = 'z'

The total persons who have doctor, mechanic, and government official but not engineer as occupation = 'z'

The total persons who have engineer, mechanic, and government official but not doctor as occupation = '2z'

The total persons who have doctor, engineer, and government official but not mechanic as occupation = 'z-5'

The total persons who have engineer, doctor, and mechanic but not government official as occupation = 'z/3'

@QuizByMickey

Total number of persons who have exactly 3 occupations = 60

$$(z - 5) + 2z + (z/3) + z = 60$$

$$3z - 15 + 6z + z + 3z = 180$$

$$13z = 195$$

$$z = 15$$

The total persons who have all the four occupations = 'z' = 15

The total persons who have doctor, mechanic, and government official but not engineer as occupation = 'z' = 15

The total persons who have engineer, mechanic, and government official but not doctor as occupation = '2z' = 30

The total persons who have doctor, engineer, and government official but not mechanic as occupation = 'z - 5' = 10

The total persons who have engineer, doctor, and mechanic but not government official as occupation = 'z/3' = 5

Let total persons who have only engineer and doctor as occupation = 'a'

Let total persons who have only doctor and mechanic as occupation = 'b'

Let total persons who have only mechanic and govt official as occupation = 'c'

Let total persons who have only govt official and engineer as occupation = 'd'

According to the question:

$$40 + 10 + 30 + 15 + 5 + a + d = 145 \Rightarrow a + d = 45 \dots\dots\dots (1)$$

$$20 + 10 + 15 + 15 + 5 + a + b = 100 \Rightarrow a + b = 35 \dots\dots\dots (2)$$

@QuizByMickey

$$50 + 30 + 15 + 15 + 5 + b + c = 160 \Rightarrow b + c = 45 \dots\dots\dots (3)$$

$$25 + 30 + 10 + 15 + 15 + c + d = 150 \Rightarrow c + d = 55 \dots\dots\dots (4)$$

Total number of engineers who have at least two occupations other than doctor = 50

$$d + 30 = 50$$

$$d = 20$$

From equation (1):

$$a = 45 - 20 = 25$$

From equation (2):

$$b = 35 - 25 = 10$$

From equation (3):

$$c = 45 - 10 = 35$$

Answer: B

The total number of persons present in the hall who have exactly two occupations = $20 + 25 + 10 + 35 = 90$

20. Questions

The total number of engineers in the room = 145

The total number of doctors in the room = 100

The total number of mechanics in the room = 160

The total number of government officials in the room = 150

$$x^2 - 60x + 800 = 0$$

$$x^2 - 20x - 40x + 800 = 0$$

$$x(x - 20) - 40(x - 20) = 0$$

$$(x - 20)(x - 40) = 0$$

$$x = 20 \text{ and } 40$$

Since, only Engineers > only Doctors

The total number of only engineers in the room = 40

The total number of only doctors in the room = 20

$$y^2 - 75y + 1250 = 0$$

$$y^2 - 25y - 50y + 1250 = 0$$

$$y(y - 25) - 50(y - 25) = 0$$

$$(y - 25)(y - 50) = 0$$

$$y = 25 \text{ and } 50$$

Since, only Mechanics > only government Officials

The total number of only mechanics in the room = 50

The total number of only government officials in the room = 25

Total persons who have all the four occupations = 'z'

The total persons who have doctor, mechanic, and government official but not engineer as occupation = 'z'

The total persons who have engineer, mechanic, and government official but not doctor as occupation = '2z'

The total persons who have doctor, engineer, and government official but not mechanic as occupation = 'z-5'

The total persons who have engineer, doctor, and mechanic but not government official as occupation = 'z/3'

@QuizByMickey

Total number of persons who have exactly 3 occupations = 60

$$(z - 5) + 2z + (z/3) + z = 60$$

$$3z - 15 + 6z + z + 3z = 180$$

$$13z = 195$$

$$z = 15$$

The total persons who have all the four occupations = 'z' = 15

The total persons who have doctor, mechanic, and government official but not engineer as occupation = 'z' = 15

The total persons who have engineer, mechanic, and government official but not doctor as occupation = '2z' = 30

The total persons who have doctor, engineer, and government official but not mechanic as occupation = 'z - 5' = 10

The total persons who have engineer, doctor, and mechanic but not government official as occupation = 'z/3' = 5

Let total persons who have only engineer and doctor as occupation = 'a'

Let total persons who have only doctor and mechanic as occupation = 'b'

Let total persons who have only mechanic and govt official as occupation = 'c'

Let total persons who have only govt official and engineer as occupation = 'd'

According to the question:

$$40 + 10 + 30 + 15 + 5 + a + d = 145 \Rightarrow a + d = 45 \dots\dots\dots (1)$$

$$20 + 10 + 15 + 15 + 5 + a + b = 100 \Rightarrow a + b = 35 \dots\dots\dots (2)$$

$$50 + 30 + 15 + 15 + 5 + b + c = 160 \Rightarrow b + c = 45 \dots\dots\dots (3)$$

$$25 + 30 + 10 + 15 + 15 + c + d = 150 \Rightarrow c + d = 55 \dots\dots\dots (4)$$

Total number of engineers who have at least two occupations other than doctor = 50

$$d + 30 = 50$$

$$d = 20$$

From equation (1):

$$a = 45 - 20 = 25$$

From equation (2):

$$b = 35 - 25 = 10$$

From equation (3):

$$c = 45 - 10 = 35$$

Answer: C

The total persons present in the hall = $40 + 20 + 10 + 25 + 25 + 30 + 15 + 5 + 20 + 35 + 15 + 10 + 50 = 300$

The total persons who have exactly one occupation = $40 + 20 + 50 + 25 = 135$

The total number of persons who have more than one occupation = $300 - 135 = 165$

Required percent = $M\% = 165/300 * 100$

$$M\% = 55\%$$

$$M = 55$$

55 can be divided by 1, 5, 11, and 55.

Hence, total factors of the value of 'M' = 4
